# 3179. TS-850 - DSP-100

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-05-14 18:58:39 UTC
From: Richard A Powers
Topic: 3179  Message: 3179

Does anybody have any opinions about the DSP-100 for the TS-850?
SSB, Digital, CW?

73, Dick WB9PWQ

honestly, I think I would sooner sell my ts850, and but a new radio that has dsp in it.....I have seen "dead" dsp100 go for 200-300 dollars. add that to the 700-900 cost of a good used 850 you could buyan ic706 with the dsp optioon and have a radio that is new, not 15+ years old

Hi Dave;
I didn't realize they cost that much.
Well, my opinion is the ICOM 706 would never stand up to the Kenwood TS-850.
(That ought to start a fire!)
But thanks very much for the info - I appreciate it.

REally raises the value of the 850 and they work
great. Brings IF DSP to the 850. the combo is better
than an 870.

Dick, I uh, I gotta say, uh, I agree with ya! On HF the 706 (new? vs 15 yo KW) is a toy compared to the 850. As far as an 850 w/dsp-100 (which I have), I would recommend buying the KW ts-870 (which I have) if you are after dsp features. Would I sell my 850/dsp-100? No!, but I believe their scarcity is what is driving up the price because the performance is early dsp technology.

Bill;
Well, I'm kind of a dumb-dumb at least when it comes to DSP.
I hear that the DSP-100 is only effective on Transmit. In SSB mode I
think.
I do have a very limited experience in PACTOR & the Sound Card modes & I
assumed that is what the DSP-100 is for.
Based on that, can you point me to a place where I can find out more
about this? (Probably the FIRST Question I should have asked!!).

Well Eric;
Thanks for the comeback. I guess it would have to be a used TS-870 as I
believe it is a discontinued item.

Dick,

Yes they are, but you can find some for sale reasonably low as to new price. They have a bum rap as far as some issues with some non-dsp chips. Just look for serial numbers greater than ~71 million. I bought one of the last new from AES and its serial number was 60xxxxx. But that is because of KW serial numbering due to issue date ie. calendar. I know they are one heck of a radio and it took the other manufacturers awhile to catch up in the dsp field.

Yes Dick, Highly recommended, I have 2 (TS850s & dsp-100) setup and use all digital modes.
I recommend using the sm220-sm230 monitor in use with digital modes to optimise the signal.

Adrian;
Thanks for the response.
Are you saying that either the SM-230 or the SM-220 will work on the
TS-850?
My TS-850 manual calls for the SM-230. What is the difference between the
two?
Same thing only the SM-220 is older????

actually lost track.. i would not have bought a 706, maybe 950 sd or ts2000.....Kenwood

I saw one sell for 725 (the dsp unit). are they really worth it for that price???

From: VK4TUX
Topic: 3179  Message: 3194

Either work ok to see your waveform. The sm-220 is much kinder on the pocket. Any distortion is quickly detected on the screen.The dsp is ideal for beautifully shaing the shift edge of digital signals improving the copy. In conjunction with a W2IHY and heil goldline the ssb audio is belissimo hihi.

Even many "newer" radios are hard pressed to come up with the receiver specs of the 850. I have owned the FT920, TS570 and all of the 706 series radios and I can honestly say the 850 blows all of them away. Even the receiver on my 830S is better than most. Too bad the DSP100's are getting as much as they are. Not worth it in my opinion, but the demand drives the prices up. I used an Apex 435 condensor mic into a Behringer PEQ2200 parametric EQ on a previous 850 setup and it sounded very nice. You don'tt need the current crop of radios to get a nice sounding station.

The price on a new 706 has been raised, and the used market price also took a jump. It sounds as though Icom is replacing the 706 with a new model (and number). So it seems Icom is trying to milk all the money they can from the 706 before it's run ends.

Not in my book! hi...

I have heard 850's sound fantastic on TX without the DSP100, just do the direct balanced mixer feed mod, and use a good bit of audio conditioning going in, ala NU9N, W9AD or W2FLA. Tyler (forget his call) also has a good 850 reference site for audio mods, I think his link is in the LINKS section of the group.

As for AM, the 850 makes fantastic AM with the DSP-100; and also with DBM feed and a bit of audio processing going in. Since it's a toss, I would opt for the audio solution myself. But alas, I prefer AM on my old boatanchor station, and CW on the 850 and the 703... hi!

Don't forget, the yen is about 15 percent stronger
this year than last. They only raised prices about 10
percent so Icom and the dealers are eating some of it,
in order to maintain sales.

TS850s/dsp100 HIFI
audio setup
http://www.directheli.com/ka0ka/index.html

Best TS850s-DSP-100 audio link out there. I have used to set mine up well.
Keep the TX filters at 2.7k in busy bands.
The word out there is the IC706 got the price jacked up some to help the new IC7000 upgrade model sell a bit better, Check out eham reviews on this.

From: rdl014
Topic: 1072  Message: 3201

I have the TS-850 and the DSP-100 and to be honest, I can not tell any difference on receive with the DSP-100 turned on or off. Others can tell a differnce on transmitt when I turn it on or off. I do have two Inrad 2.1 KHz filters in the 455 and 8.83 slots. I read on eHam reviews that with the two Inrad filters, the DSP-100 didn't improve the reception any. I also had an Icom-706MkIIG transceiver and its receiver was horrible. It had no selectivity even with the FL-223 1.9 narrow SSB filter. All you heard were the big guns and QRM. I have a TS-2000 and its receiver doesn't come close to the TS-850. I agree with another poster that said the TS-830 is the only receiver close to the TS-850. Maybe Kenwood should start making the TS-850 again only with IF DSP available this time.

Try turning off all the internal filters and then use the dsp filters on
the received audio.
See how that works.

Ray I hear a dramatic difference on mine, A intensity and clarity change very noticeable. The rx switch on these sometimes do not engage properly, try a little drink of wd40 in the mechanism. I may get the opportunity to record a mp3 soundfile sometime, and upload to files to show you the difference on both mine here.

Adrian,

Like Ray I don't hear much difference on my 850 either and I have a pair of Inrads fitted as well.

>I hear a dramatic difference on mine,
Do you have any optional filters fitted

>I may get the opportunity to record a mp3 soundfile sometime, and upload to files to show >you the difference on both mine here.
I for one, would be very interested in that when you get the time.

"I for one, would be very interested in that when you get the time".
Have recorded and emailed the file to work Steve. I have adsl there and will upload tomorrow. Dial up here at home and with yahoo's changes mean I cannot upload using dial-up even though its under their new 2mb limit.

regards

Adrian

de VK4TUX

"Adrian,

Like Ray I don't hear much difference on my 850 either and I have a pair of Inrads fitted as well."

Do you have any optional filters fitted
Yes 1.8k SSB Kenwood filter

I would not use WD40 as after the volatile compounds "evaporate" there will
be a residue left behind that can gum up the mechanism.

If it is just the mechanical portion of a switch a light oil such as 3 in 1 oil should be great.
If it involes contacts look at the CAIG line of contact cleaners that include a lube.

Ray I hear a dramatic difference on mine, A intensity and clarity change very noticeable. The rx switch on these sometimes do not engage properly, try a little drink of wd40 in the mechanism. I may get the opportunity to record a mp3 soundfile sometime, and upload to files to show you the difference on both mine here.

I usually use CRC-226 for these jobs, but mentioned WD40 as it is well known of course in the USA. Thats a education re - gumming residues for me. I dont know if CRC-226 has the same properties, but has done the job fine where needed for me sofar.

Hi All

I have a TS850 and got a Timewave 599+ "plugged" for $75. It goes to the audio output instead of the IF stage, but It works fine and it is a good alternative to the DSP-100. It requires a bit of more operation but in my case it is worth to have. I was worried about RF going into the audio but I get nothing if using proper ground.

Try turning off all the internal filters and then use the dsp filters on
the received audio.
See how that works.

I think I mentioned this before, but I use a small
hypo-type oiler with Mobil-ONE synthetic motor oil in
it. Seems like it helps re-liquify the lube that is
already in the planetary gearsets on the older rigs,
and does quite well with the metal-on-plastic bushings
of the new encoders. Works fine on steel-on-brass
bushings in the cooling fans too.

I compared the TS-850/DSP-100 with the TS-2000 by tuning to the same frequency and switching back and forth between the two transceivers. The TS-850 could "hear" stations that the TS-2000 did not and the overall signal strenth to noise was much better with the TS-850. I tried this on all the amateur bands and the TS-850 is better. TS-2000 has greater frequency coverage and is my satellite transceiver now. If I by-pass the two Inrad filters, I can tell a big difference when I turn on the DSP-100. With the two filters selected, the DSP doesn't help with receive, only with transmitted signal. I hope this clarifies my other post.

Hi Ray,

I have a TS850SAT, a TS570sg and a TS930s.
When I compare these three on pure sensitivity, the 570 beats the 850 on all bands. The 930 comes third. Especially on CW, you sometimes can read stations on the 570 (especially with the N.R.2 DSP filter activated) which are barely hearable on the 850.
Concerning receiver noise, the 930s is by far the quietest, followed by the 570. The 850 has the noisiest receiver. The 930s receiver is really amazing on this subject compared with the two others. In fact the 850 is so noisy it becomes irritating and fatiguing to listen to.
Fortunately the 850 has other qualities where it beats the two others (selectivity - IMD)

Receiver tests performed by all the major reviewers would tend to say the opposite. I have never owned a TS930, but I have had two TS570's and a FT-920 and am now the owner of my fourth TS850S. The receivers in my 570's didn't even come close to the 850's receiver. About the only thing I have found to perform as well is my TS-830S. Maybe you have a secret version of the 570. I quickly sold mine because I found the audio DSP to be very bad.

What makes a receiver quiet ?

No big secret to tell here ... just reduce the amount of frontend
gain.
You want a quiet receiver ? Turn on the AIP. Want even more ?
Turn on the 18dB attenuator.

Well the question is how much frontend gain do we really need ?

At the time when the TS850 was produced manufacturers where fighting
each other with specs. Kenwood decided to beat them with the 850.
What they did was give the radio 10db more front end gain then their
compatitors. ( the extra 10 dB was not needed but more about that one
later)
It is easy to make a receiver more sensitive because we all know that
the sensitivity of a receiver is 99% the noise figure of the preamp.

So if it is that easy any one can make a senitive radio . ? Yes,
but.there is more than just sentivity ......Is it that easy.
Because as soon as you add more frontend gain to a radio the strong
signal behaviour becomes bad.
Strong signals and an overloaded receiver... bad ....
Aha got the picture, we also need to look at stong signal behaviour ?

If you the trade off between sensitivity and strong signal behaviour
than you realise how good the TS850 is. They have created a receiver
which is more sensitve than the latest and most expensive
Icom/Kenwood/Yeasu with an state of the art strong signal front end.

Now an other question comes up.....

How much frontend gain or sensitivity do I need to listen on the HF
bands ?
Well this should be fairly easy to answer.
Connect your antenna to your radio. As long as you hear an increase
of the noise level, your radio is sensitive enough.

OK but this is scairy, with the AIP on and the 12dB attennuator there
is still significant increase in the noise.

Yep that is correct. The radio is basicly too sensitive for what we
need. Perhaps if you have an super yagi you and you life in the
country you might get some use out of it, but no it could be less.

This is basicly why Kenwood decided to reduce the frontend gain for
all models after the 850.

So I think it is good operating practice to add as much atennuation
to the antenna so that there is still an significant increase in the
noise level.

I usally have the AIP on and the 6dB ATT.
No need to say, that the TS850 is now the quitest receiver you will
ever experience.

What do you do when you hear a weak signal ??
Turn up the volume, gives the same effect as adding more frontend
gain. However with adding more frontend gain you could get more
intermodulation problems and related noise *.
*= only in Areas with strong signals.

If you are still reading ... here is my opinion on DSP.
It sucks for weak signals, I have never pulled signals out of the
noise when I really needed it.
Yes I have pulled signals out of the noise, but I was able to copy
them without DSP anyway.
OK I admit this is only for wide band transmissions such as SSB.
For narrowband transmissions such as CW. DSP is fine.

But If you decide to buy a rig with DSP buy one without an IF DSP.
I think an LF DSP is probably a good trade off.
The reason behind that is that the DSP proscessor is always to slow
to get rid of the Noise pulses. An analog NB circuit is supperior.
Some thing are better in Analog, some things are better in digital
techniques.

I have had a few radios with an DSP IF such as the Icom 756PROII and
the NB is bad. Since power lines produce a lot of noise here, I
really need a rig with an exellent NB.

Ok enough about the 850, I am sure there are other good radios
on the market. I am just a happy chappy with the 850.

On CW I use the DSP in my PC. A simple programm and your soundcard
will do the trick for you. No need to buy an new expensive rig with
worse specs. It will save you money. I am sure you will find an other
purpose for it.

# 3219. Re: [TS-850_450_690] DSP-100

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-05-23 13:51:27 UTC
From: Bill K0ZL
Topic: 1072  Message: 3219

I run the 850 with the dual Kenwood 500 hz filters and AIP ON (preamp off) most of the time. This makes for a very quiet receiver, and I can hear everything that any other rig can hear. The only rig that beat the 850 in this regard is an FT-1000D that was loaded with filters.

Just curious, what PC DSP software do you use. DSP's are a very
interesting subject to me

Hi Max,

No secret 570 here.
The only thing is, I did not HAD a 570 and I did not HAD a 930. I have them now, all at the same time and for several years. That makes it a bit easier to compare.
Read the Eham reviews and you will see there are quite a few reports on a noisy receiver.
The audio DSP of the 570 is better than that of the TS850, that's for sure.
I'm not a DSP fan, but if it works, it works and it does on CW for the 570. I don't know of a single AF DSP that does something useful on SSB though. Not a Timewave, not the 570 DSP, so if you bought the 570 because of it's dsp, you made a mistake there...

<bruno.beckers@g...> wrote:

The 850 has the noisiest receiver.

Receiver tests performed by all the major reviewers would tend to say
the opposite. I have never owned a TS930, but I have had two TS570's
and a FT-920 and am now the owner of my fourth TS850S. The receivers
in my 570's didn't even come close to the 850's receiver. About the
only thing I have found to perform as well is my TS-830S. Maybe you
have a secret version of the 570. I quickly sold mine because I found
the audio DSP to be very bad.

I am using the DSP software from JE3HHT DSP filter version 1.11
I find it very usefull with CW.

http://mmhamsoft.ham-radio.ch/dsp/

There is an other package on the market but this one works the best.

Cheers,

I like playing with DSP's and I have a collection of differing models, and guess what? The Timewave's are at the bottom of the heap. The higher end models do OK on CW but are useless on SSB, After buying them I felt cheated and a old NIR-12 runs rings around them, on SSB the sound is clean and the noise is gone.

One mans opinion, save your money don't bother with a Timewave filter, they are way overrated.

I have a TS-930, a TS-940, and a TS-830, the TS-830 is the quietest of the whole lot.

Thanks for the response, I have his software and I play with it once in a while. I will be using it more in the future.

I purchased a DSP board with audio in/out ports and will be using it to design my own filters, his software will be of help in comparing to the DSP board and tweaking filter coefficients.

I have several Kenwood radios that I run to a Behringer mixer UB1002 with it's output to a DSP filter which drives the speaker/headphones. This setup also allows recording of audio from any receiver.

I like the arrangement, I don't have to switch cables from radio to radio.

Ray,

Do you have the menu settings in the 850 set to tell it to use the
DSP100? If you don't route the IF signal out to the DSP100 you won't
hear any difference.

Max

# 3226. TS-450S for this Newbie - Serial Number, Issues Comment ?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-05-24 02:07:11 UTC
From: ve9xyz
Topic: 3226  Message: 3226

looking at a used TS-450S with Serial Number 30300519 that seems in very good shape.

Can you tell me:

(1) What is the likely date of manufacture of this rig? I'm hoping to avoid an early production unit that may have some inherent weaknesses...

I've seen postings in this NG about 1st digit - 2 = year etc but I don't know if this pertains to the 450 or which years to avoid, if any.

(2) What are likely problems that this radio has experienced over the years that I should watch out for? The battery has been replaced once, and owner says everything functions OK Says all keypads work OK Non-=smoker, clean, no scratches etc.

(3) What is a TS-450SAT worth these days (does not include mike, speaker or power supply as the current owner has upgraded...

Glad to have fornd this NG - sounds as if I'm going to need a few experienced owners soon.

No Max, Certainly not upset m8, just enthusiastic in my reply :). Don't take me the wrong way hihi. When a aussie gets upset, you will know lol. Anyhow you said "menu settings in the 850" but here we are talking adjustment mode menu for "Forced ON/OFF for receiving DSP carrier"(Menu 05) and "Forced ON/OFF for receiving DSP carrier" (Menu 06). These items are things the average owner would not be aware of and are not mentioned in the user manual, and I guess that was my point, just as not to confuse the average user. Hey no need for apologies and the like. Technically you had a point, but the average owner with a user manual probably would have been saying "where is that in my book"? if you see what I mean Max. Sorry you took me the wrong way, I was having a bit of fun there too :).

From: Frederick Van Veen
Topic: 3226  Message: 3231

My 450 is easily the best rig I've ever owned. I bought it on eBay
for about $650, which included cross-country shipping, two mikes
(including MC-85), and a full set of filters (but no power supply).
It has operated flawlessly for two years. I did take the preventive
step of moving the battery to a more accessible location, but the
battery itself was in fine shape. If you can get a clean 450 for
about 500 bucks, I'd grab it.

Hi Kevin, the radio was made in 1991, I believe it was the first year of production for this model. I have the TS-690S that was made in 92 which is the same radio but with 6 Meters and I have had no problems. One important thing to look for is memory battery leakage. The battery is located in the front of the radio top left side behind the display. If the battery has not been replaced it may have leaked and could have caused damage to the circuit board that it is attached to. The TS-450/690's are very good radios. How much is the seller asking for the radio? If it is too much you may want to look at the Icom IC-718. This is also an excellent radio and you can buy one new with DSP for $500 now from Giga Parts. This price is good until June 30th. They also have a 60 day lay-a-way that is nice. I hope this helps.

Correction, the Giga Parts sale price is good until May 26th, then
it goes up to $550 . That price is good until the end of June.

Don't worry about serial numbers! Far too much time is spent on this subject.

Most importantly is that the rig is operating properly on all bands, without distortion and with full power output. If it's from a non-smoking environment, that's a very big plus.

Cosmetically it should be an 8 or 9; you are going to spend a lot of time looking at it, and someone else's scratches are not desirable unless the price is VERY right.

As for pricing, all depends on the filters installed, the history of the rig, accessories included, etc, as well as desperation of the seller, desperation of the buyer, and so forth.

Expect to pay from $450.00 to 700.00, depending on the factors I just mentioned.

Remember, everyone, that we are missing that all important BODY LANGUAGE (more exactly, FACE TIME) in email and of course you can't hear the laugh in someone's voice as they respond, hence the occasional misunderstanding.

Thanks to all who have been contributing to this very interesting subject, by the way.

--- In TS-850_450_690@yahoogroups.com, "VK4TUX" <vk4tux@a...> wrote:
> ??? I've heard everything now, since when Max??? Its plug and play pal. The only menu to worry about is the advance menu 1 TX filter on/off, but only if you want that TX ability on the TS850s filters. The dsp works anyway once its plugged in. the front TX/RX on/off buttons on the dsp-100. then control wether its in or out.

Did I upset you in some way Adrian? I was simply trying to help someone out. I thought according to the Service Manual, page 35, the menu settings on [power on + F.LOCK] menu settings #5 and #6 enable the DSP100 unit. If I am wrong, my apologies to the group. But really, no need to freak out is there??

The Icom 718 is a great little rig; and the DSP unit
is the same (audio based) unit used in the 703 and
706. I love my 703 DSP, works almost like a squelch
and also makes AM sound a bit narrower for those tuff
75M am qsos. but that is off topic, sri

Hello all,

Is present whether an opportunity in TS-850S to expand the top limit of frequencies up to 50#1052;#1043;#1094;?

Thank you in advance!

With Regards,

Valentin de UR7HBU

If you mean 50 mhz? the answer is no. The only way is to use a
transverter. The 850 is not a 690.

What about 32 Mhz ? Could be handy as an IF with a transverter.
Is that possible with the 850 ?

I've never seen anything to indicate you can modify the TS-850 to cover higher than 30 MHz. Your best bet is a transverter. TS-850's are a bit tricky to interface with a transverter, but Down East Microwave has an interface to do it. It's called the TIB-850.

I know the Realistic HTX-100 can be modified to cover 26.0 through 30.0 MHz. This can be useful if you are using a transverter that puts 10368.0 MHz at 28.0 MHz on the dial, and you're trying to hear a beacon that has drifted down to 10367.995 MHz. :-)

No problem with the TS-850 there.

Hi!

Thanks ZACK, BILL and the rest for answers. Frequency 42 - 45 MHz is necessary for me.

How connect to transverter? The schematic diagram is necessary.

Who can it has in it experience? I have not found the description of the interface on the Internet

Thanks, 73!

Zack Widup <w9sz@...> wrote:
I've never seen anything to indicate you can modify the TS-850 to cover higher than 30 MHz. Your best bet is a transverter. TS-850's are a bit tricky to interface with a transverter, but Down East Microwave has an interface to do it. It's called the TIB-850.

I know the Realistic HTX-100 can be modified to cover 26.0 through 30.0 MHz. This can be useful if you are using a transverter that puts 10368.0 MHz at 28.0 MHz on the dial, and you're trying to hear a beacon that has drifted down to 10367.995 MHz. :-)

No problem with the TS-850 there.

73, Zack W9SZ

Hi,

You can find the way i interfaced transverters on my home page.
http://tk5ep.free.fr
As well as a lot of infos abt the TS850.

Hello all,

Bit of a long shot but I wondered if anyone here is using the W2IHY 8 Band EQ and Heil HC4 mic, set for DX working, rather than "studio quality", and would care to share the slider settings.

I've set up the EQ to what I think is ok ( I haven't had any "lousy audio" comments yet) and
I know it all depends on the individual voice etc but it would be very helpful to know what slider settings others are using just to confirm I'm in the right area.

Trevor G0KTN

Trevor, you are wanting a peak at about 1500-1800 hz
for DX work.

Best way to use an equalizer is to concentrate on
CUTTING the bands you don't want, rather than BOOSTING
the bands that you do want. So you would end up with
the opposite of the so called "loudness" curve, in
which bass and treble are boosted. instead, your bass
and treble bands will be cut.

Start with moderate cuts, get on 75 meters at night
with someone who is patient and not too close to you,
and experiment with settings; go for maximum
intelligibility (Quick Brown Fox over and over... hi)

The report you want is "That setting really cuts
through the noise!"... then TAPE THE CONTROLS DOWN or
mark them. Tempt ye not to adjust during contest or
pileup! hi

I find that it varies a bit - optimised band to band but mine are;
50; 2
100; 1
200; -2
400; -2
800; -1
1600; 3
2400; 9
3200; 12

Using Heil Proline insert on Goldline type(like PR20) Mic. Set for reasonably natural sound

From: Scott Ingram
Topic: 3250  Message: 3250

I have a TS-450. My cousin gave me an MC-50 desk mic. This mic is wired for a 4-pin connector. Do any of you have a wiring diagram or anything that will tell me how to wire the 8-pin plug I have? I am trying to get this fixed up before I pass my code test (already passed the General written test.)

Any and all help is appreciated!

73,
Scott

Do you use a W2IHY Bill? Did the other TS850s dc-dc repair converter last week with 10kohm smd resistor replacements(for 22k ohm units), and works great Last time I used 13K ohm as on the dk mods article I posted.. Found the problem originally running a psk31 beacon on 40m running 100w variation over 15 seconds. I nearly forgot how weeny those smd,s are; 1.5mm by 2.5mm each.Also did the (anti-barbecue)auto Antenna tuner mod with direct feed soldered to the Inductor coil end. Bill I still maintain this is a design weakness in the Kenwood pcb.

All kenwood eight pin round are wired the same and should be in you users manual. As far as the mc-50, it depends on what it was wired for previously. If it was kenwood, then kenwood.net has the connector wiring on their site. let me know if you need it (i think it is on mods.dk as well

This power on mode brings up the adjustment menu as follows:

00 CAR correction FSK pseudo SSB
Possible filter exchange at transmission

01 CAR-W correction
Possible filter exchange at transmission

02 0 adjustment for RIT/XIT

03 Wide adjustment for SLOPE TUNE HIGH CUT

04 Wide adjustment for LOW CUT SLOPE TUNE

05 Forced ON/OFF for receiving DSP carrier

06 Forced ON/OFF for transmitting DSP carrier

Then LCD tests

FULL ON
FULL OFF
LCD TEST1
LCD TEST2
LCD TEST3
LCD TEST4

Nothing in this menu really needs adjusting.

73,
Max

Mark,

The "I" series Heil mikes have a higher output than the tranditional mics to drive the low gain amps in the Icom rigs. I don't see why it wouldn't work with the 850 although you may have to keep your mic gain down more than you normally do.

How do you go running FSK and/or 500hz filters with mmtty Bill?

regards

Adrian

Yes Dennis, were you looking for a replacement? I
cannot help there.

I think I was going to throw together a
troubleshooting thing to help ID which chip is bad;
was that what you were referring to?

Have not had time to do that yet.

Thanks

bill

On the RTTY polarity, if you are receiving OK, receive
is set up OK. Obviously. On TX, you need to set up
sked with someone that can let you know if you are
reversed or not.

Most RTTY ops will tell you; if they here you come
back and you are not "printing" on their screen, they
will set THEIR receive to reverse, then contact you,
then tell you if you are upside down. Then it's a
simple matter of either changing your software, or
doing it at the rig with the menu command.

receive is simple, just run audio into the computer sound card. I was doing it with a mic from the computer set near the receiver speaker! Copied just fine, even with room noise.

On TX, you will need to hook up an interface, using optoisolator or transistor, from one or two of the computer serial port pins (forget which one) to the rig to key the PTT and the FSK line.

Most guys run AFSK on RTTY now; much easier interfacing and you use the rig VOX to key the radio. With the 850, you can run AFSK in LSB and still use the narrow filters, with the slope tuning to put them right on the RTTY sigs.

I take exception to Bill's statement that 'Most guys run AFSK on RTTY now;'. I dont believe this to be a true statement, maybe just a personal opinion. Yes some of the new kids coming over from PSK31 may do it for a while, but if they have a rig that has a FSK line for keying, they move over to it FSK shortly.

All you have to do is go over to psk31 and see the poor audio signals coming out of the soundcard.

Please if your rig has FSK use it!!

On my website I have several articles on how to hookup the TS-850/450 on FSK. On the Kenwood, in a menu setting, you need to change the default keying setting so get the FSK right side up. This is explained in the article.

Now I see Bill K0ZL on rtty from time to time and his signal is always nice and clean. so AFSK can work, but if your rig has FSK it should be used.

Joe K0BX
on rtty since 1975.

Bill, doesn't the slope tuning only affect RX? I can only TX through the 500hz 8.83 filter with FSK. In AFSK, mine will not tx unless I move up to the 1.8k 8.83 ssb filter I have installed. I'm using normal tones and shift (170hz). I use a 500hz 455 filter too and this doesn't seem to affect TX.

regards

Adrian

Thankyou Joe, I have done all of you pk-232 mods and alignment procedure (170hz shift and resistor - 432k filtering changeover) with good success. I also added the 1uF tantalums across 4-11 pins on the op-amp chips to reduce noise there. All worked great. Yes FSK seems the way to go with narrow filters. That's why I'm curious re anyone claiming they can TX through 500hz filters with the afsk method as I cant (yet). Great site you have keep up the good work.

I'm not on PSK-31, but if you use the menu setting that lets you select
your transmit filter, couldn't you select any of them? This is in the
extended function menu. Details are at www.mods.dk.

Hi Paul, Yes the ext function TX filter function is enabled. Its not a problem with psk31 to TX on the dual 500hz filter setup, only with rtty afsk method I find is not getting through on TX. The filter selection isnt the subject or issue here, its the passing of the signal through the 500hz 8.83 filter. As rtty afsk rides a 2125 -2295 audio tone shift it wont pass the 500hz 8.83 filter, hence FSK needed to do this.If anyone can TX with a 850s in afsk rtty using the 500hz 8.83 filter, I'd like to know how please?

Hi Paul, thanks for your comments but I am having trouble following what you are trying to say? Also I went to the www.mods.dk site and could not find what you were talking about. Maybe you could do me a favor and give me the subject like of the modification?

I have found it easy to run the narrow filter on PSK31 by setting the center freq for PSK to 1800HZ and use LSB. Then turn on the CW filter and turn the bandpass tuning control to move the filter center to 1800HZ. Works well and can run 100 watts on PSK if need.

Thanks again.

Hi Adrian thanks for you kind comments. Glad it help.

I have been running the TS-850S/At on rtty from the 1st day I got it 13 years ago. Always 100 watts output and many many RTTY contests.

I am not sure how to answer your question on AFSK. For PSK31 I set the center freq to 1800 HZ, then goto the 400 HZ filter (all lower sideband) and adjust the bandpass tuning.

I can get 100 watts output with no problem.

I think that you can do this with AFSK but I am not sure about the 'Hi-Tones' of 2125/2295 (170 hz) but the TS-850S has a low tones setting and will put the mark done to about 1450 (do have the manual here at work). Then put the rig in lower ssb, insert the filter and adjust the bandpass.

Now if you are using something like MMTTY, you have to adjust the input filter to the low tones.

You are using the PK-232 and I am not sure that you can adjust the bandpass tuning to 2125 Mark. but if you can with the CW filter in on LSB then the tones will pass on xmit.

Hope this helps. But FSK is better!, just remember FSK-R on the PK-232 output.

Subject: Re: Re: [TS-850_450_690] Re: RTTY on my 850...results

Hi Adrian thanks for you kind comments. Glad it help.

I have been running the TS-850S/At on rtty from the 1st day I got it 13 years ago. Always 100 watts output and many many RTTY contests.

I am not sure how to answer your question on AFSK. For PSK31 I set the center freq to 1800 HZ, then goto the 400 HZ filter (all lower sideband) and adjust the bandpass tuning. vk4tux"Slope tune??? Is this what you mean. I dont see a bandpass control or if shift on the 850s Joe?
I use the narrow filters ok on psk31 but limited in the audio range. I adj base freq to suit."

I can get 100 watts output with no problem.

I think that you can do this with AFSK but I am not sure about the 'Hi-Tones' of 2125/2295 (170 hz) but the TS-850S has a low tones setting and will put the mark done to about 1450 (do have the manual here at work). Then put the rig in lower ssb, insert the filter and adjust the bandpass. < vk4tux"How? on TX?"

Now if you are using something like MMTTY, you have to adjust the input filter to the low tones.

You are using the PK-232 and I am not sure that you can adjust the bandpass tuning to 2125 Mark. but if you can with the CW filter in on LSB then the tones will pass on xmit.

Hope this helps. But FSK is better!, just remember FSK-R on the PK-232 output.< Please explain Joe??? re pk-232 output.FSK-R ??? I am using FSK ok but would like to know how to use afsk if possible etc.

Thankyou Joe, I have done all of you pk-232 mods and alignment procedure (170hz shift and resistor - 432k filtering changeover) with good success. I also added the 1uF tantalums across 4-11 pins on the op-amp chips to reduce noise there. All worked great. Yes FSK seems the way to go with narrow filters. That's why I'm curious re anyone claiming they can TX through 500hz filters with the afsk method as I cant (yet). Great site you have keep up the good work.

I take exception to Bill's statement that 'Most guys run AFSK on RTTY now;'. I dont believe this to be a true statement, maybe just a personal opinion. Yes some of the new kids coming over from PSK31 may do it for a while, but if they have a rig that has a FSK line for keying, they move over to it FSK shortly.

All you have to do is go over to psk31 and see the poor audio signals coming out of the soundcard.

Please if your rig has FSK use it!!

On my website I have several articles on how to hookup the TS-850/450 on FSK. On the Kenwood, in a menu setting, you need to change the default keying setting so get the FSK right side up. This is explained in the article.

Now I see Bill K0ZL on rtty from time to time and his signal is always nice and clean. so AFSK can work, but if your rig has FSK it should be used.

Joe K0BX
on rtty since 1975.

From: Bill K0ZL
Topic: 3268  Message: 3277

The most that these will run and still maintain good
ALC action on 15 meters is about 115 watts.

Select 15 meters, FM mode on a dummy load; set the
meter to ALC and car and pwr controls full CW. Adjust
the ALC or output limit pot until ALC starts to
decrease from full scale and stop there. That is your
max power output, whatever it is.

If you never run 15 meters, you can run about 140
maximum on the 450 and 850. In this case, select 10
meters and do the adjustment as above.

The outputs will not be stressed even at 150.

Hi Adrian, well this control is called 'Slope Tuning' and is the right bottom control on the front pannel. Sorry for me calling it the wrong thing.

BTW, you can set VFO A to 500 HZ for receive and VFO B to the wide position 2.8 KHZ for Xmit and go split.

Also on the hidden menu you can set a setting so that you can select the filter for XMit seperate from the Receive filter.

So many ways to 'skin the cat'.

Hi Adrian, well this control is called 'Slope Tuning' and is the right bottom control on the front pannel. Sorry for me calling it the wrong thing.

vk4tux : I was thinking that :) But doesnt this control only control RX? How does it recentre the filter? I thought it just trimmed the bandpass edges in to tighten up on RX? Its not a IF shift is it? I still dont get it really. I use PSK deluxe and the prog is set to 1550 filter centre(within software) I TX around 1500 - 1800 tone mark . Outside this range is no good with the narrow filters. I move the vfo frequency to bring signals within my 1500 - 1800 operating window with narrow filters. Joe are you adjusting the low or high slope tune etc and really is this just to help your RX situation?

BTW, you can set VFO A to 500 HZ for receive and VFO B to the wide position 2.8 KHZ for Xmit and go split.

Also on the hidden menu you can set a setting so that you can select the filter for XMit seperate from the Receive filter.

vk4tux :Yes very aware of that one, Thats what I do to setup whatever tx and rx filter combination I want.

So many ways to 'skin the cat'.

There is a hidden menu, but it is explained in the TS-850S service manual.

Item number 2, which is off by default, when turned on will let you select which filter is enable during transmit.

So you can have the cw 500 hz filter on for rtty receive but you can have the ssb filter enable for transmit.

Here is the link:

http://www.mods.dk/view.php?ArticleId=792

The one station that I was unable to figure out what he was taking about, Paul, really had this answer. I just couldn't understand. Old German thick head!!!

So hope this helps.

Ray,
if it is on ebay, the appropriate listing here is 'for auction'.
Secondly, if you are seeking 'dead presidents', 'PayPal only' limits
your prospective bidders.
Good luck,
Frederick

It sounds like you are planning to work the SSB portion of the band so I would orient the dipole horizintally since most SSB operations are using horizontal antennas. Now if the band is really open it won't matter much.

You may want to put up 2 horizontal dipoles...one facing east-west and the other facing north-south so that you can switch between them for some directivity based upon which direction the other party in the QSO is located.

You can also build a small 3 element beam from 1/2" copper pipe that work very well....direct connect and can be turned by a tv antenna rotor. Also a moxon rectangle (basically a shortened 2 element yagi) is also an inexpensive antenna made from 1/2" copper tubing and is also direct connect.

If you are planning to operate AM or FM then vertical is the way to go.

Hope this helps some....

73,
Jon

On 6M skip, it doesn't matter; only with local ground
wave stations, you will want to have same polarization
as they do, usually horizontal for SSB, vertical for
FM.

# 3297. RE: [TS-850_450_690] 6 Meter antenna polarization

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-06-17 17:30:30 UTC
From: David Guretzki
Topic: 3292  Message: 3297

Thanks to those who responded. I've started with a single horizontal installation oriented north/south since I am in Saskatchewan, Canada (grid DO70) and expect I will hear more 6M operation south of the 49th than to either the west or east of me.

While I'm asking, does anyone know of a good grid map available online that covers both Canada and US? I've seen the ARRL one, but it is only US.

[html][mx][spf][heur]

On 6M skip, it doesn't matter; only with local ground wave stations, you will want to have same polarization as they do, usually horizontal for SSB, vertical for FM.

Hello OM's,
Trying to find a pcb service pictorial or schematic for this 250hz filter I have purchased, but have found defective. Any info appreciated please, and I have done extensive google searching :). Also Bill (As I know you have this setup); Do you find the 500hz 8.83 *window is in a offset position as compared to a 500hz 455 filter; ie as viewed RX on a *psk waterfall window. Hence such that the two filter edges aren't inline and the result window is less than 500hz. I checked slopetune alignment etc and all is ok there.( I have the SM :)) Maybe this is normal just wondered. Perhaps IF alignment ?

regards

hi Rudi,

Are you asking about how to use a headset and a
computer sound card with the ts-450?

HI Adrian,

No I have not noticed a problem with any bandpass
offsets on the filters; however, when I was running
RTTY, I found slightly better copy on noisy sigs by
dropping the high cut just a bit; like 2 notches. This
seemed to help by broadening the skirts just a little
and the PK232 liked that a lot.

# 3302. Mint TS-850 SAT For Sale

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-06-18 15:55:06 UTC
From: Joe Moraine
Topic: 3302  Message: 3302

I have a Mint Kenwood TS-850 SAT for sale in the DFW area only. I bought this radio new and it has LESS than 10 hours transmit time on it. It has been used very sparingly. No mods or circuit changes have been made to this radio...it is like it came from the factory. Manual and Schematics included. There are no scratches, marks, or dings on it whatsoever. Works like new. 60 million serial number. For pickup only in the Dallas-Ft. Worth area of North Texas. $795 Pickup only.

ok so you want to connect your computer headset to the
450 through an adapter? That is brilliant!

Anyone have info on this? would be a very inexpensive
way to get a headset for ham gear in general.

Too much paranoia.

If your email was not sent out, how did people figured it out to send you an answer? Most likely your one email asking for help got delayed on the way to your mailbox and not other persons.

Andrea,

What circuit did you use for that? The headset is a
condenser mic and I think the 850 etc wants a dynamic
mic.

From: K0BX
Topic: 3296  Message: 3311

I used a computer mike/headset with my TS-850 for a long time. What you have to do is take the 8 volts off the mike jack to work the mike but you need a cap. and resistor to block the voltage off the element itself. There was an article in QST years back on using the Radio Shack Mike element and I believe it is in the ARRL Handbook. I found it in my 1998 ARRL Handbook page 22.29 called an "Inexpensive Amplified boom/Headset Mike.

It shows the connection to a 8 pin Kenwood TS-440S mike plug which is the same as the Kenwood TS-850S.

I used the circuit with a Computer Headset with excellent results.

I hope this is what you are looking for.

I have made many headsets mic combos up for my TS850. I use a Plantronics A40 headset available at any Staples and through a biasing resistor and DC blocking capacitor in the 8 pin mic plug it is very easy to do. Pin 6 on the mic plug is not used so I usually wire the speaker audio up to that pin. This way one plugs does all, just stick a dummy 1/4" plug into the headphone jack to mute your speaker. VOX has never worked better.

# 3315. TS690 Computer interface

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-06-21 17:35:10 UTC
From: David Guretzki
Topic: 3315  Message: 3315

I am wondering what people on the list have used to interface the TS690 with their personal computers other than the stock Kenwood IF-232S interface. Have you found a suitable (and cheaper and available!) replacement? I have a Pentium laptop with a 9 Pin serial port that I would like to use along with the Ham Radio Deluxe software.

Thanks.

Hi folks

Anybody on the list make up a comparable PJ-4Y cable for the Kenwood H/H?

Have searched the net but have not come across a site.
Any help appreciated

I have used the W1GEE interfaces for the TS850 and and another for an Icom rig. It can be found and
ordered at http://www.hosenose.com/interfaces.asp and others. No power supply required.

Check the following link for an interface used with ts850 and ts940,

http://www.mods.dk/view.php?ArticleId=805

I don't know anything about the ts690, so don't know if you require
additional internal circuitry.

cheers, Paul

Hallo David,

I've made one for my TS690s and it is excelent. Look at
http://www.hamlan.org/tech/kenwood232/knw232.htm for details.
I connected my circuit in a DB9 box. Not tested with HRD but should
work. It's very simple - worth to try to make one.

# 3321. Molex connector part #

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-06-25 04:07:10 UTC
From: n7ioh
Topic: 3321  Message: 3321

Hi all, I have gone through my Mouser catalog and looked at the
Molex web site trying to figure out the part number of the Molex plug
that is on the power cord of the TS-450's & TS-690's. I bought a used
IC-730 and it uses the same plug but it did not have the power cord with
it when I bought it. I now want to make my own power cord and just need
to find a number for the Molex plug.
Thanks, Al, N7IOH

It is not a standard Molex plug. I bought one at a hamfest a couple months ago, so I know they are available. But that is the one thing, if any, that has irritated me about the Kenwood rigs I have. I wanted to use my TS-440 out in the field a few years ago and didn't have one of those plugs, so I used clip leads on the connector on the rig. They got a little toasty on transmit! :-)

click on the link and it says 14.95, so I guess it depends on the shipping
charges, if any.

I am not interested in buying the complete power cable, just the Molex connector and the 4 pins. Zack W9SZ says they are not standard Molex connectors. I would think that they should be available somewhere at a cheap price. If other companies are selling them from $3 - $7 for just the plug and pins they must be buying them somewhere. I have found some from packetradio.com for about $3.00 each which is not too bad thanks to Dave VE3WEJ. It still seems a little high when Mouser lists the plugs for about 40 cents each and the pins at 10 cents each. I see that there are other companies that make similar type plugs. I am wanting to make a custom plug for portable use where the electrical run will be longer then normal so I will be using heaver wire because of voltage drop. I will also be making up a standard length cable so rather then buy several cables I would just rather make up my own. I was hoping that someone out there would have a part number or a line on where I could buy these connectors and pins for what Mouser sells them for.

My 2 Cents. I bought a Kenwood/Icom power cable at Dayton this year. Cost $10.00 Connector/wire/2 fuses w/30 amp fuses inside/ Wire was 10 GA. Looked very good and from a good vendor inside.

I hooked up my New IC-756PRO3 to it and the PS. The connector seemed a bit loose but thought it would be fine. After a couple of days, the power went off on the rig. Oh Boy, new rig blow up. But fooling around the Power connector it came back to life. Next time it did it I put my hand on the connector and it was very soft from the heat from the current draw. The wire was cool, everything was fine except for the cheap connector.

I replaced the power cord with the one that came with the rig, tight fit and no more problem.

So bottom line, there must be difference in the connectors as the one couldn't handle the 23 Amps draw of the Icom.

Hope this helps.

Joe K0BX
and yes I still have my TS-850S/AT so I will have a rig when the Icom has to go back for repairs.

Stop the insanity!
Please do not add me to any distribution lists (Joke, Stories or Junk) without my permission.

I know about the $7.00 connectors from Powerwerx.com. Powerwrex.com seems to be high on most of their products. I can buy the connector from packetradio.com with pins for $3.00. I have bought #8 and #10 red and black zip wire and some Anderson powerpoles from Powerwrex and they were overpriced on those items also. I will try a little longer to see if I can't find a vendor tho carries the correct connectors.

Well I guess it depends on your urgency. Are the connectors from packetradio.com not the right ones or are they too expensive as well? Compared to the prices up here in Canada, both of those prices are a steal.

Hi Max, the connectors from packetradio.com are the best prices I have seen so far at $3 ea. My thoughts are that a plug and 4 pins from Mouser will cost me about $1.00 US IF I can find a part number for the plug. There is no doubt that somebody is making the plugs and pins, I just need to find out who. I will grant you that buying a plug from Packetradio.com for $3 each is still a good price when you compare it to what Powerwrex wants $7.00. I am looking at buying 3 to 5 of these plugs when I buy them. I also need a plug for my Yaesu FT-100D, the battery side. I think I will have to end up buying them from Powerwrex.com because I think they are the only ones that have them at $6.50 each if I am not mistaken. It is too bad that the big ham radio manufactures can't all standardize their power plugs and Mic plugs and Mic wiring. It would sure make life a lot easier.

# 3334. Carrier Points for LSB and USB

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-06-27 19:03:53 UTC
From: ve6drw
Topic: 3334  Message: 3334

I'm new to the TS-850 and the group. My 850 has the (receive) carrier point on the USB a little lower than the LSB side. I'd like to adjust it, and I have a copy of the service manual, but what do I adjust? I'd have to guess it comes from the PLL, as it drives the carrier unit, but I'm not sure which adjustments to track.

Any suggestions?

Thanks

Dave

# 3335. Headset adapter for TS-850 (and probably others)

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-06-28 06:19:32 UTC
From: Dave
Topic: 3296  Message: 3335

Here's a web page describing a headset adapter I recently built and tried out on Field Day -

http://www.zievid.com/Radio/TS-850/MicAdapter.htm

I haven't tried it, but using a stereo jack for the mic should work with computer headsets as well.

I fed this both directly to a TS-850SAT as well as through a Heil Sound EQ-300 microphone equalizer. Between contacts I had a lot of fun fiddling with the audio.

73,

- Dave

I've done this too with my 450 and a Plantrontics Encore H101. I brought all the components out into a small interface box and wired up a PTT line using a momentary contact pushbutton mounted on top of a pill bottle (the "hockey puck" as I like to call it). I can either work pure VOX or use the handheld PTT...works like a charm during Field Day!!!

Hallo Al!

Molex Terminal block P/N is 50841060
Pin P/N is 2081001

Look at the following Molex pages:

http://www.molex.com/cgi-bin/bv/molex/home_init.jsp
http://www.molex.com/cgi-bin/bv/molex/home_init.jsp

Next, you can ask semples for free from Molex as I did and received 5
pcs of bloks and 30 pcs of pins.

Sample page is:

http://www.molex.com/cgi-bin/bv/molex/home_init.jsp

Good luck and 73,

Tom, 9A2TK

# 3348. TS850ATS Display

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-07-06 13:15:31 UTC
From: Bill Smith
Topic: 3348  Message: 3348

Many thanks to Clif at AVID for helping me find the leaky capacitor on the display board. I know this has been discussed before but I didn't know whch cap it was. Well it's C18 (16v 470mfd) on the display board. If you take the front of the radio off, like I did when I changed the memory battery, the board can be removed for maintenance very easily. I wrote this up and it is on the 850 Repair page.

Many of these capacitors have been reported as leaky leading to display problems. I recommend that everyone replace it before it fails as the electrolyte may damage the board's trace if you don't get it in time.

I don't have one. It may be in the service manual but
I doubt it. It's a standard 16v 470mfd electrolytic
capacitor.

Subject: [TS-850_450_690] TS850ATS Display

Many thanks to Clif at AVID for helping me find the
leaky capacitor on the display board. I know this has
been discussed before but I didn't know whch cap it
was. Well it's C18 (16v 470mfd) on the display board.
If you take the front of the radio off, like I did
when I changed the memory battery, the board can be
removed for maintenance very easily. I wrote this up
and it is on the 850 Repair page.

Many of these capacitors have been reported as leaky
leading to display problems. I recommend that
everyone replace it before it fails as the electrolyte
may damage the board's trace if you don't get it in
time.

73,
Bill Smith

# 3354. TS690 Remote Control

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-07-07 15:30:03 UTC
From: n8fau15
Topic: 3354  Message: 3354

Is the TS690 remote control software still available and if the reote control option wasn't installed how many data lines are involved to get it going (ie TXD, RXD, CTS, RTS). I'm looking at getting a TTL to RS232 converter for this....

Now that I've changed vehicles I need to mount the rig in the trunk and control it via my laptop...

Any info would be helpful....

there are several aftermarket software packages available for radio contol
via computer. the choice is yours as to which one you like, and which one
your laptop can handle....are you going to be using dos, win95 win98, me
xp.etc

also, my logging program controls dex spots, and sends the radio where it
needs to be. another possibility

Hi and thank you for taking the time to read this. I have built a personal ham web site and have tried to think of all the neat stuff to put in it and foremost make it user friendly. I know some of you are experts on computer stuff and I would like some constructive criticism about my site. I have a lot of features for registered users on the site including the feature of personal photo albums for users, private forums, reviews area, events calendar and an on-line real time chat and much more, it has been a labor of love but I am running out of ideas. The only thing that I feel it is missing is a classifieds area, and that is in the works as I write this. The site is best viewed with 1024 by 768 resolution and DSL or faster connection. I look forward to hearing from you.

Hello all, I have a slight dilemma. I need headphones to properly listen and copy weaker stations, ( old age catching up lol) while my wife has excellent hearing and likes to listen to the speaker while in qso, By the way my wife is also a ham.
I have seen a circuit that I am looking for with volume control for each the speaker and headphone but cannot find it now.
can any one help with this toy.
Thanks one and all
Gary ve3rin and Dee ve3dee

If you plug in either the remote speaker or the
headphones, it will cut off the internal speaker.

Some radios will allow you to partially plug in the
headphones, and the speaker will stay alive, but not
all will do that.

I would suggest that you obtain an external speaker
and simply wire a headfone jack to the speaker leads,
not using the NC contacts as usual on the headfone
jack; just go in parallel. You may also wish to use a
stereo jack, and wire the two channels together; this
will allow you to use the common "earbud" type of
headphones or any headfones with a stereo 1/8" jack.

My 703 Icom is wired that way; with a stereo jack,
both channels wired together. I used a ten dollar pair
of "earbuds" from Radio Shack for Field Day and it was
very comfortable.

In T-coil mode, they mute the microphone so the external noise is
knocked way down. But then you're back to using headphones.

# 3370. TS-850 broadcast Band Images

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-07-13 20:52:50 UTC
From: wy3d2000
Topic: 3370  Message: 3370

I am getting images of broadcast band stations every 10khz or so from 1700khz clear up thru the 75 meter band. They almost disapear when I put the attenuators in the circuit. They are S-9 in strength at times. Any ideas? I have isolated it to the RF board. I have swapped boards in the rig and the problem goes away.
Frank WY3D

# 3371. Re: [TS-850_450_690] TS-850 broadcast Band Images

From: Bill K0ZL
Topic: 3370  Message: 3371

No need to swap boards. Just change the RF switch
diode at the input to the BC band filter. I don't have
the schem in front of me but can give you the diode
numbers later today if you email me directly.

Look at the filter in the service manual, it is the
one that covers .500 to 1.600MC

The diode is an RLS135 I think; you can sub a 1N914 or
a 1Nsomething, whatever will fit, if you are careful
with the leads. Best to use the surface mount device.

Bill

From: Frank Mayer
Topic: 3370  Message: 3372

Bill,
I wish I would have got your idea the other day! Now the rig won't receive at all with that board. I did some initlal trouble shooting since the receive went out all together. The receiver hears a when I inject a signal at L54 input to the 1st mixer with plenty of signal strength but virtually nothing before that. I would think the problem is before the preamps because the problem is on all bands. I was handling the board out of the rig while I was using my spare board in the rig. When I went to put the original back in I discovered it had stopped working. Maybe static from handling blew something. Any help would be appreciated Bill.
Frank, WY3D

I prefer upper bands only SSB.Its a good idea buy INRAD filters first 2,4khz on position 8.83 and second 2.4khz on 455.Some peoples said that narrow filters degrage output modulation.What is the better choice? 2,4 or 1,8khz? Its necessary have a filter for SSB on position 455?
Thanks for any answer.(sorry for my simple english)

For regular ragchewing the 2.4 filter would be the better choice. For contesting and DX'ing the 1.8 filter will get you heard better. My personal preference is for nice sounding full audio, which is why I use the 850 in the first place.

Whoa. I'm a touch corn-fused. Is the filters on a 450 used in both
RX and TX? "Narrow filters degrade output modulation" and "the 1.8
filter will get you heard better" makes me think you're talking about
TX audio, which I didn't think was touched by the IF filters.

Steve, KE4MOB

You got me Steve,

Sorry I was referring to my 850 when responding to his question. That being said, it still holds true, narrow filters on receive are great for picking out that certain station, but I prefer the fuller sound. Of course at times, a narrow filter makes the difference between being copyable and not.

It is a well known fact that the stock noise blanker in the TS850 really didn't do much. Have you removed the two SMD caps as per the published mod? Mine modded NB works just great and will cut an S9 noise level down to S3.

Max

I agree. Bill K0ZL did mine along with changing the battery etc. and the new blanker takes out line noise beautifully. I really couldn't believe it.

Thanks for answer.I am a novice.I like a full range RX modulation.
I vill looking for 2,4 khz filter 8,83.
And what about 455 position?It is designed for narrow CW fiters.
I find any INRAD filters for position 455. 1,8 or 2,4.I think that
on 455 position TS450 has any single crystal.With complete crystal
filter it will be better receive or less noise?
It have sense give any filter in position 455 for SSB?
Many thanks TOM

You'll find it at www.mods.dk and many TS-850 sites. I believe it is
removing two SM caps in the NB section of the RF unit.

Bill, K0ZL, did mine when he fixed my DC/DC converter, and it works great.

73,
Paul K4PDM

Gary,

There is a full writeup on it on www.mods.dk. It involves removing two SMD caps on the RF board under the speaker. You can just crush them with pliers if you like. Makes a dramatic difference in the operation of the noise blanker. Bill has posted a couple of nice close up pictures on mods.dk.

Does the NB work? then it's been modded, hi!

You will need to inspect your digital unit that is
located just under the S meter area, it's a board
about 2.5" by 4", and compare it with the photos for
the mod; if those two SMD brown caps are missing,
yours has been modified.

I have one @ KENWOOD YG-455CN-1, 250Hz CW narrow filter Ebay Item number: 5790670164 .
Why did they make the 8.83 version 270hz? This has me curious when the 455 unit is 250hz.

It seems that Attenuator is working to hard. If I hear a signal with 9+40 and push in 6dB the signal go down to about S5.
I also have read about Expand TX in one file it stand remove D11 and move it to D09, in another only have to remove or cut D11. What is right

I think it is easier to get narrower at the lower
frequency, perhaps.

My attenuators are close to the ratings on them. Now where near 40 over down to s5. I would suspect that your attenuator is vaporized.

Once I repaired the ATT of a TS-50. One of the two resistores of the ATT circuit was open and the signal with the ATT on was simmilar to yours. Maybe lightening or transmitting in the receiver with another rig caused this I think.

# 3402. TS-450S Low Receive Audio problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-07-26 01:19:58 UTC
From: Dennis, Philippines low budget dxer
Topic: 3402  Message: 3402

July 26, 2005

I have recently acquired a TS-450SAT with a defective Carrier Board. I'm using it right now as an MW/SW receiver since it can still receive (and transmit) in AM mode. However the receive audio is quite low even when I turn the AF Gain to maximum. Can someone please help me pinpoint which part in the AF Amplifier chain is the defective part. I don't have much test equipment, infact I only have a DMM as my only test equipment. Any pointers would be greatly appreciated.

Thanks in advance.

Dennis Ls. M. Cruz / DV7-BJY
the Philippines

P.S.

Can someone in the group too help me pinpoint which of the 2 DDS chip on the carrier board needs replacement and where do I get those chips?

Topic: 3403  Message: 3403

Hello to all,

I am a new member to this group. I have a Kenwood ts850sat who works very fine.
I got it in 2003 and at same time I bought a cw filter for it since most of times I work on cw ;) .
Mid 2004 I started to have problems with cw filter, ie in calls other stations hear me some khz up and a heird noise. I talked to kenwood dealer in Oporto who sent me a new 270 hz cw filter, better than the previous one, and I replaced with this one. In fact appeared that problem was gone.
But some days ago I saw that, if I move ts850sat dx stations I did not hear them, yesterday I did severall call and no answer, then, accidentally, I switch off filter to 2,7k and saw that was a shift with 270 cw filter on. Today morning talked with kenwood in Oporto and he said me that probably problem was in radio and no in filter since this kind of filter is a mechanic one. Of course I was not happy :( :( :( but I trust in this dealer (very fine ham) and decided to wait until september due vacations of personnel. But, when I activate key 9 (rev) cw turned int cw-r and filter started to work fine, without shift. Did some qso's and all fine, even all freqs matches fine now with cluster.

So my question is:
is there any bad configuration in my ts850sat or is it the right configuration to work with a cw filter (with cw-4) ???

Any help will be welcome here.

Best 73s to all and thanks to participate in this group.

CT1DRB
David Quental

PS: who cares, during weekend will work under call CT6C during IOTA 2005, but before contest will be qrv, only in cw :) :) :) , as CT1DRB/P in EU-145.

Topic: 3404  Message: 3404

Greetings,

I have had my TS-850 for a long time. I bought
it used from a ham friend. I sent it off once
before for repairs and all has been fine until
a couple days ago, thus my motivation to
join this group.

In the few days preceding, I had a few QSOs
and all was fine. The next day, I was getting
on freq for a Monday sked and it would not
transmit.

The "ON AIR" light comes on and the fan
starts in both the CW and SSB modes
but no indication whatever of any output
via the 850's display nor on my external
MFJ tuner's meter.

I looked at all the controls to see if something
got pushed that wasn't supposed to be.

I used all the controls that seemed to cause
relays inside to click in case one was dirty
from lack of use.

I checked all coax connections.

My power supply reads 13.5 v and steady.

I have looked at this group's archived posts.
I have looked at the links and the files but
didn't see anything exactly like what I am
experiencing.

I am ready and willing to send it off for repair
but was wondering if there is anything not
too technical that I could check and possible
fix myself.

All ideas appreciated.

Iden K6JHQ - Northern California.

Look at http://www.mods.dk there is show how to do also to get 60 meter band in.
It is better to look as I write it here but it is simple.

Information is found at www.mods.dk Sir. Select Kenwood from left Manufacturer list , then TS850S from right model list.

Adrian

de VK4TUX

please can anyone tell me how to modify my rig to include
this?
Thanks
Alan

I have just for 4 days ago make this modification an now I look for some grossband QSO, where I listen on 60 meter and where I send on 40 or 80 meter
Because we are not allowed to send on 60 meter yet, but I hear it come in the future.

Same thing. Since CW doesn't involve the
mic, I feel that it is excluded.

When replying in a thread, unlike in some other
situations, it is helpful to me to have the complete
thread to read.

I help with troubleshooting so many rigs, that after a
day or two, I have forgotten what we were originally
talking about.

Bear with me; you have an 850 with no SSB output, and
you have not tried the other modes?

Always try the rig in FM, AM or CW mode when
troubleshooting output issues; this can rule out huge
sections of the rig.

If SSB is indeed doa and the other modes are not, I
would suspect that the carrier oscillator DDS it not
working.

Hi David,

You may be getting ready to loose a memory battery!

Try a master reset (A=B and POWER ON) and see if that helps.

Also, cycle the little CW filter select dipswitches under the small cover on top of the rig; they may be dirty.

No indication of output on SSB or CW.

The "ON AIR" light and fan come on when
attempting to transmit.

I know this isn't directly related to kenwood rigs,
but
I need to get a question answered so I'll throw this
out here.... Looking at buying a UPS for my computers,
is there any advantage to having a usb vs a serial
interface? I few models I'm interested in only come
with a RS232 interface, but I did notice that some
models have a usb interface.

Thanks for any and all replies,
73,
Clint

This could be many things; as I said before, if you
have output in AM or FM modes but not in SSB, then it
could be your carrier oscillator DDS unit.

If you have no output in ANY mode, it could be
anything from a bad switching diode to blown finals,
drivers, or an earlier stage malfunctioning.

Good luck.

Can we clarifiy this.
Am I correct to say; (on a ts450) both the 8Mc/s & 455c/s filters are
used on rx only - excepting the 455c/s 6k filter to indicate the user
wants narrow dev fm (if that's his thing).
So nice thought, but a tighter ssb filter doesn't alter tx audio at all.

# 3424. TS850sat Display Problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-08-01 18:49:34 UTC
From: Nik Read
Topic: 3424  Message: 3424

Hi all,

Firstly can I thank all the responded to my appeal for help over the drift problem wit my 850.. One problem sorted!!..

After using the 850 over this last weekend to get some new IOTA's I switched off last night and slept!. On waking this morning I switched the 850 on and the display did not come on, the radio powers up ok and is also ok on TX and RX.. but the display is blank. I tried resetting but no Joy.. I them check the web for the "850 Repair Page" that has been mentioned on this forum but could find no trace of it..

Am I right to think the main display device has failed or could there be another reason ??.. I managed to acquire a service manual today and took the radio apart to see if there was any trace of the caps leaking as reported before but could see no sign. Any ideas anyone please !!.

I would hate to replace my 850 as I have not found anything to replace it yet!!!...

Thank You in advance,

Nik Read

Mine did the same thing recently. I found that C18 on
the display board can and will cause this problem. I
found C18 (it's an electrolytic) on the display board
and replaced it. No go!! It had leaked a little but
the board looked ok. Gave up and sent it to Bill K0ZL
for a repair.

73,
Bill

# 3429. I have a friend

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-08-04 00:34:56 UTC
From: oz1jux
Topic: 3429  Message: 3429

I have a friend
He just buy a TS850Sat, so that he have 2 piece of the 850 now but on the second he have lot of problems. He can hear that we are speaking but when he try to speak to us he speak about 2 kHz down in LSB mode and also on FREQ in USB mode. He have try to reset it, but it not help him.

# 3430. tuning locks at 30 Mhz problem

Hi,

One of my rigs has the folowing problem.
When I start it up it goes very fast to 30 Mhz in steps of 10 Khz.
I can't use any buttons to stop it.
I have disconnecten the CH/VFO switch because that's doing 10 Khz
steps. But no result. Changed quite a few capacitors.
No luck yet.
Any ideas ?

73 Ron

Most likely the UP logic line from the mic UP button
ckt is shorted, due to a shorted cap pulling it to
ground. With the rig off, measure ohms to ground on
both the UP and DOWN circuits, see what you get.

There is also a possibility that the chip that
interfaces the UP/DOWN logic to the CPU is shorted on
that one port; less likely than a shorted SMD cap
however.

Yes I tried that.

But the hand make makes 1Hz steps, and this error 10Khz steps.

Good idea any way.
Thanks
Ron.

nope, rit/xit located 2 knobs from right bottom, and 2 knobs up....also
little push buttonsabove that knob....you can tell if transmit frequency is
changing on either rig, comparing to own receive frequency

No, beause we was a group on same Freq. One have locate him on USB and another on LSB.
We was talking on 3770 kHz on he was speaking on 3768.2 LSB and 3770 kHz USB.
But now he have make a reset.

Hi Bill,

Did some more tests today. IC14 is the interface, and it works fine
as far as I can see. The inputs for the M.CH/VFO.CH switch work fine.
Also the dial is on the same chip. It converts it to an 8 bit signal
which goes to the CPU.

Perhaps IC14 is faulty, but that would be hard to say.

Mhh perhaps an other Digital board ..... ?
I will ask and see if there is an other out there ...

Hi Ron,

I am not shure now but I thought you had two of those 850's. If so,
what about a swap of the boards to tackle the culprit?

BTW, all OK in PA-land...

Good luck!

Ramon, PE1OUW

Hi All,

Quick question: Are there any known reasons for failure of the TS450S internal ATU? I've already checked for signs of a leaky battery - and whilst the battery is old (and probably due for replacement) there's no signs of any leakage or corrosion.

I have the service manual, and notice pin 9 (?) on the ATU cable should go 'high' (5v?) when the ATU button is depressed. This doesn't seem to happen - although trying to make contact with pin 9 was quite tricky - so I can't be sure.

Due to the solid construction of the radio, I've not had the time (or confidence) to strip it right down.

Is there anything else obvious I can check? From memory - the ATU failed shortly (perhaps immediatley) after the temporary 'wideband transmit' trick (power on with clear and enter buttons depressed?) to enable TX on the extended 40m band. Menu settings are set correctly (ATU enabled).

On switching in the ATU, nothing happens. Pressing the 'tune' button also does nothing. On disassembling, re-assembling and then performing a full reset, it did bleep some lengthy CW at me when pressing 'tune' - but only did this once, and I'm not proficient enough at CW to instantly read it. I can't replicate this.

Help! If all else fails I'll send it off to Kenwood - but the cost of repairs may not be worthwhile on a radio of this age :(

Topic: 3443  Message: 3444

I sold my 450 2 months ago after owning it for 10 years. So I am
relying on memory, as I no longer have it in the shack.
It could be beeping you that the SWR is too high to even attempt
a tune....or, perhaps the ATU is not enabled in the hidden menu.
I forget the menu numbers, but you can select the tuner on or off,
or you can even set the tuner up as "manual" - where you use
the vfo knob and mem knob to perform a manual tune of the built
in tuner.

Hope that helps

# 3445. Dimmer switch

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-08-10 08:32:18 UTC
From: rapi02
Topic: 2159  Message: 3445

Hello friends

I'm newbie and have TS-850 with dimmer switch problem. When I swtch
that button, the display don't change the brigthness of the display.
Where I must check first for this problem? Any suggestions and comments
really appreciate. Sorry for my poor English.

Win, Java Island Indonesia

My favorite trick is to forget to turn up the carrier level when I want to tune on SSB . You could use CW or AM but without carrier the tuner won't work.

check the switchto verify its actuating the circuit, then need schematic to
tracebefore and after that to find where it is failing..

# 3449. TS-850S/AT Filters [One More Time]

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-08-12 19:52:29 UTC
From: Mark Saunders
Topic: 3449  Message: 3449

Yesterday, I installed the filters in my 850. WOW! What a difference. I can't believe I used this radio for 10 years without filters. I installed the 500 Hz CW filter and the 1.8 KHz SSB filter. I installed them only because I got them dirt cheap. The difference is like night and day.

From: max_ve3tmt
Topic: 3453  Message: 3453

In reference to the previous message, this circuit will allow you to monitor your signal as it sounds to the operator on the other end. Currently there are two types of TX monitors being incorporated into HF radios. One type for example is found in the TS570 series radios. This is strictly an AF MONITOR. All it does is give you a sample of what your mic audio sounds like. Depending on filter bandwidth, external mic EQ'ing for example, your actual transmitted signal may sound nothing like this. The monitor found on the TS830, TS850, and TS940's to name a few are IF monitors. These monitors actually sample your transmitted SSB signal after the filters and re-insert a carrier so you can here how you sound over the air. This is a feature many people would like to have. I found this circuit in an old 73 magazine from the 80's. Looks like it would be pretty easy to build, so I thought some of you guys might be interested. I may even build one myself. I don't need it in the 850 but it would be good to have on hand.

73,

Max

F.A.O Gary VE3RIN,

Thanks for reply but I'm sending this via the group just in case others have any thoughts !!..

I have changed the C18 but still no Joy.. I'm still a bit confused with C7, is this the one on the Display board ?? Also as I said in my last 225uf is not a standard value, so I'm told ??, so I was sold 220uf instead.. Could You please confirm with Your contact and see if this value would do when the original is 100uf !..

Thanks for assistance,

Nik

# 3456. TS-850sat Display problems again!!

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-08-14 19:14:21 UTC
From: Nik Read
Topic: 3456  Message: 3456

Sorry for this folks but HELP !!!

I changed the C18 cap on my display board today but it made no difference.. The display still did not work!!..
There was sign's of slight leakage but nothing major, the tracks were not damaged.

Looking at previous e-mails on the subject I found one from Paul Pagel referring to " checking the
electrolytic on the +B line"... Can anyone (Paul perhaps?) please tell me which Capacitor this is ??

Also "Check the high voltage inverter. When the display is working, There is a long fluorescent bulb.
Check with display when on, you should be able to find 50-60V" Where do I take the measurement from ??
Is the High Voltage Inverter the metal box on the display board ??..

These question's might sound silly but I would like a second opinion as I want to be sure !!!!..

Thanks for any help in advance, and for help so far ...

73's
Nik

Bob,

The 690 is basically a 450 with 6m capability.
The 850 has many additional features that make it a much better
contest rig. If you need 6m, use a transverter - 850 designed with
transverter use in mind.

I haven't used a TS-690 but the 850 is a superb contesting rig. It still holds its own against the newer radios.

The TS-850 is the contest version, the TS-450/TS-690 are lower price versions.

The TS-850 has a completely different front end that can deal with
nearby strong signals way better than the other two models.

I own a TS-450 and it can't compete under harsh conditions with my
friend's TS-850 or my older TS-930.

During the last field day, my TS-930 would not be bothered at all by
another ham transmitting 70 KHz away from my frequency and his
antenna 20 feet away from mine, but my TS-450 would be knocked out by
someone transmitting on another band, a big difference.

The 690 is like a 450 with 6 meters.

The 850 is HF only, 10-160 plus gen coverage

850 is slightly better, esp if you like CW full break
in.

450/690 very cabable and reliable rigs too, and
smaller; so you decide what you need.

What about the 950s or 950/s/at isn't it a better rig than the 850 it is newer right? Also I am seeing a lot of 850/s 850/s/at but not too many 850's. Are those the same rig with some kind of mod or something?

I know this may sound like a stupid question to some but I really don't know much about Kenwood and want to learn the overall line-up.

Like what is the difference between a TS- and a TR or a TR-### and a TR-###/s and a TR-###/at and a TR-###/s/at ect, that type of thing.

Is there a website that has honored Kenwood with a full blown lining out of the rigs so to speak were I can study the differences?

From: KJ7BS
Topic: 3457  Message: 3463

The official model name is TS-850S and the /AT designates the model with the internal antenna tuner. You can add the internal automatic antenna tuner to the TS-850S, if you can find one.

I've had my TS-850S/AT since 1995 and have worked many contests and countries with it. The tuner has tuned anything I have connected to the antenna jack.

I finally added the YK-445C-1 (500Hz CW filter), YK-88C-1 (500Hz CW filter), and the KY-88SN-1 (1.8KHz SSB filter) last week. What a difference these filters make.

I've not experienced the display problem some are reporting nor have I had to replace the Li-on battery. The display does take a few seconds to light if I have not used the radio for more than a month.

TR-XXXX AND TM-XXXX pretty much are V/U mobile rigs.

TS-nnnn is the HF base stations, except the TS-711 was
a multi mode VHF rig... go figure.

Anyway, the 950 is a great radio, the 850 pretty much
copies the 950 but in miniature with 12v finals, no
internal supply, and several bells and whistles
missing but the internals are very close; i.e. first
and second mixer designs, RF amps, etc; the 950 has a
lot more circuitry to do more pony tricks than the
850.

950 also has dual-freq receive but must be in same
band. 850 does not. So buy 2 each 850's used... hi

The 850 came in two flavors, std with autotuner and
without. The TS-850S was valid for both units, the AT
unit had "W/AT" stamped the box but they shared the
same model number as far as the tech literature etc is
concerned.

# 3465. Need help

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-08-16 02:49:31 UTC
From: KE5CTY Bob
Topic: 3465  Message: 3465

I sent a message to two groups which seemed as though they
were general Kenwood groups thinking that would be the
place to post my question. Well, it has been over four
hours now and not one response.

Please someone help me on this question:

I am the proud owner of a
new/used TR-9130 2m all mode.

Works and looks great (nice little rig)some neat functions
associated with it a really quiet receiver.

Three quick questions:
1) Does this rig have an internal tone board?

2) If not:
What is the "tone" button for on the front? I saw in the
manual it said something about repeater operation but the
frequency seems way off for the 110 tone I am needing.

3) If this isn't a tone as we know tones today can you
give this machine tones somehow or is this rig destined to
be my SSB/CW/fm simplex only rig?

73 fer nw,

Hi Bob,

AS I have posted before, please allow 24 hours for a response to a specific inquiry. It sometimes takes us that long to get our books out and get an answer for you.

If none is forthcoming, it does not mean that no one heard your request; it means that no one has the answer you request.

That said, the 9130 did have a tone option board but I don't have the number for it. It's impossible to find these now anyway, barring a stroke of luck.

You can add a Comspec board to the 9130 but it takes some doing to find the right 8v tx only source and the correct injection point. And you need to feed the Kenwood rigs from the Comspec boards with a 47-100K resistor to drop the audio levels and to keep the Comspec board from loading down the TX audio.

I apologize for my impatience you guys do a good job.
Please sincerely forgive me for any offense.

I was frustrated when I got it and saw the "tone" button,
but then figured out it must not mean tone as I know tone
to mean today.

What was that "tone" button far when it was made?

Morning Guys,

My two cents...

On 8/15/05, Bill K0ZL <coorsbill@...> wrote:
> Anyway, the 950 is a great radio, the 850 pretty much copies the 950 but in miniature with 12v finals, no internal supply, and several bells and whistles missing but the internals are very close; i.e. first and second mixer designs, RF amps, etc; the 950 has a lot more circuitry to do more pony tricks than the 850.

And a LOT more weight! :)

> 950 also has dual-freq receive but must be in same band. 850 does not. So buy 2 each 850's used... hi

Actually the SDX has dual receive that can be in different bands.. t
requires Power on reset keypress to enable it but it works fine...

And I wouldn't trade my 950SDX for a Mark V on a bet! But don't tempt
me with the FT-9000...

I also have a TS-690SAT with the DSP-100 and that is a pretty decent
radio too. The receiver is not quite the 950 but it's better tan most
ans is a good SO2R mate and it was great in the camper...

Good Morning, or evening from downunder ....

In my opinion the 850 is better than the 950 for the following
reasons.
We just said that the Mixer the IF etc etc is more or less the same.
Correct that is the case.
Still I think the 850 is better .... Why ?
Ehh the 950 has some leakage which can't be solved.
So you will hear ghost signals in the band because of the second
receiver.
KISS wins.
Any way the 950 is still a very nice radio, which I wouldn't mind
having in the shack.
Hopefully I did not step on some toes ...

Ahh forgot one thing where the 950 would be better ....
The 850 is too sensitive, with the 950 Kenwood understood that
better, and reduced the sensitivity, and traded that for strong
signal behaviour.

Still you could do the same with the 850, just have the 6 dB
attunator always in.

I don't have the review in front of me, but QST said that the 850 was in some ways "significantly better" than the 950S. (I think my quote is correct!) Of course, that may apply only to the original 950S version.

I have been a Kenwood user for many years, and currently have a 130-V,
130-SE, TS-930, TS-850-SAT, and (GASP!!) a Icom 756Pro-III.

The TS-850 is a really fine radio. I bought it new shortly after they
came out, and it has been in daily use ever sinse without any failures.

It will always be here - it is user friendly for it's complexity, and CW
is very good

Bob,
Tone button on most of the older rigs was for a single frequency "tone burst" usually
1750Hz as I recall. Can't say I have ever run across a repeater that used it for access.
You could outfit the rig with a tone board manufactured by Communication Specialists
however you are pretty much limited to a single tone without doing a lot of extra
work...but perhaps the repeaters you need to access are using the same tone frequency.

Subject: [TS-850_450_690] Need help

I sent a message to two groups which seemed as though they
were general Kenwood groups thinking that would be the
place to post my question. Well, it has been over four
hours now and not one response.

Please someone help me on this question:

I am the proud owner of a
new/used TR-9130 2m all mode.

Works and looks great (nice little rig)some neat functions
associated with it a really quiet receiver.

Three quick questions:
1) Does this rig have an internal tone board?

2) If not:
What is the "tone" button for on the front? I saw in the
manual it said something about repeater operation but the
frequency seems way off for the 110 tone I am needing.

3) If this isn't a tone as we know tones today can you
give this machine tones somehow or is this rig destined to
be my SSB/CW/fm simplex only rig?

73 fer nw,
Bob

If I recall correctly and I could be wrong, but I think
the 1750hz tone burst was for European repeaters mainly in
the UK.

Bob,
Tone button on most of the older rigs was for a single
frequency "tone burst" usually 1750Hz as I recall. Can't
say I have ever run across a repeater that used it for
access. You could outfit the rig with a tone board
manufactured by Communication Specialists however you are
pretty much limited to a single tone without doing a lot
of extra work...but perhaps the repeaters you need to
access are using the same tone frequency.

# 3475. Re: [TS-850_450_690] TS-690

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-08-16 18:21:43 UTC
From: John
Topic: 3457  Message: 3475

I bought a new TS 950 SD (not the SDX) around 10 to
12 years ago. I operated it for two months, and then bought
a new TS-850 SAT. I had both rigs side by side.......and,
I preferred the TS-850. I just preferred the sound of the RX
and TX audio from the 850. So the 950 SD got sold - and I still
today have the TS-850 SAT. It is currently sitting alongside
a new FT-1000 MKV field and TS-2000. The TS-850 SAT
still holds its own against these new rigs. I am not parting
with my TS-850 SAT, it's here to stay. Truely a solid
and reliable perfoming rig.

I don't have the review in front of me, but QST said that the 850 was in
some ways "significantly better" than the 950S. (I think my quote is
correct!) Of course, that may apply only to the original 950S version.

# 3476. RE: [TS-850_450_690] Need help

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-08-16 19:14:17 UTC
From: Bill K0ZL
Topic: 3465  Message: 3476

There were or are two "tone" systems in use today. In Europe, most repeaters require a 1750 hz tone at the beginning of each transmission to open the machine.

Here in the US, we started with "whistle up", in which you would whistle up a machine; later systems got a little more sophisticated and looked also for the 1750 hz tone, or a touch -tone sequence to turn on the repeater. These were mostly for "closed" or restricted access machines.

Today in the US, even "open" machines are encouraged or required in some areas to use CTCSS, or continuous tone-coded squelch systems, also known as PL or Private Line (they are anything BUT private) or Quiet Channel (for the GE buffs). This relies on a sub-audible tone from about 68hz to around 250 hz, depending on the system requirements, to open the repeater squelch. This prevents a plain old carrier (or intermod, or jammer) from doing it, but also prevents an unknowing user or visitor from accessing the machine. Many repeater groups still fight this and have in fact modified their tone access, so that a toned signal will access the repeater and bring up the transmitter immediately, but a non-toned signal must be held for a second or two to do the same thing. This serves to keep out the increasingly-prevalent intermod from the repeater system but does not lock out the occasional user, visitor or non-member from using the machine, say, in an emergency.

That said, there are now some systems using digital squelch, which is another sub-audible system that uses a digital bit-train to bring up the machine instead of a continuous tone. The advantage here is greater security, many more tone possibilities and "quieter" operation in that it is harder to hear the digital squelch tones over a rig with a big speaker than with CTCSS.

The tone button in the older two meter rigs could be used to fire up a 1750 hz tone board (if in Europe) or an optional CTCSS board in the US. Most hams did not buy these boards for their old rigs because they weren't needed by and large, until a few years ago. Now, with CTCSS standard on every new rig, and digital

squelch available on many of them, the inclination to add CTCSS to older rigs is left to those that can do the work themselves or really like their older radios enough to justify paying someone else to do it.

Installing CTCSS on an older rig can run upwards of $100.00 with parts and labor.

With new rigs running $149.00 or less, with more power and more features than the newer rigs, not too many hams are interested in retrofitting the older rigs.

Short answer? SSB and SIMPLEX, HI!!!

You may wish to use a handheld to monitor your favorite machine.

Bill

the 850 sensitivity is a good thing on 10-15 meters; I
often use the preamp there ("AIP" off).

On 20M and below, AIP is almost always ON (preamp
off).

Which they had labeled that correctly, "preamp
on/off". It's so confusing the way it is.

If you put any credence in the ARRL lab tests (old style), here's how they stacked up. Hard to beat the 850 or 950 on BDR in that era - the IC-765, FT-1000D & original 1000MP, OmniV only ones comparable. Would that some of today's rigs did as well. I'll take an 850, 765 or 1000D in a contest any day.

Randy you have just made me a happy camper:

Randy as a result of your post I did some research to see
if I could find something similar in nature to your
findings and I came up with this link:
http://www.va3cr.net/pdf/pr-sum.pdf

Gave me a lot of insight into my IC-728 and a bunch of
other rigs too.

Thanks

73 fer nw,
Bob

Subject: [TS-850_450_690] Re: TS-690

If you put any credence in the ARRL lab tests (old style),
here's
how they stacked up. Hard to beat the 850 or 950 on BDR in
that era - the IC-765, FT-1000D & original 1000MP, OmniV
only ones comparable.
Would that some of today's rigs did as well. I'll take an
850, 765
or 1000D in a contest any day.

Even on 10 meters, I leave AIP on (preamp off). I can hear propagated thunderstorms on 10 meters all the time. If that's the case, I surely don't need more sensitivity!

I think preamps are useful if you're using compromise (reduced size, mobile/portable, NVIS) antennas, but on our HF bands, thermal noise is so high that preamps are more a nuisance than not.

Hi Dave, you are right.

I use it with the G5RV because it's a bit of a mismash on 10M and I don't feed my receiver through it, so I loose some sensitivity there and the preamp helps make up for it.

It does make a difference, depending on the band noise, when copying very weak CW sigs (QRP ops tend to do that a lot). Sometimes having the preamp on helps push a little more of the desired sigs thru to the speaker, sometimes it doesn't. It all depends. I am just glad that there is a switch there.

Hey Dave, how have you been? Long time no QSO.

73,

Bill K0ZL

# 3484. W8NF, TS-850 receivers and Field Day

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-08-18 22:30:54 UTC
From: Dave
Topic: 3457  Message: 3484

Bill (and group),

I'm getting used to the new QTH. We're a few miles outside the city limits, so there's a whole lot less noise on the bands than in the high-dense area I was in before. I preserved the TS-850 outside of our otherwise packed belongings so that I could get on the air quickly after move-in. In fact, I even operated portable from the apartment where we stayed for a few months. But it's really fascinating to see how much different the bands sound when you've moved 650 miles northward up the coast. Not as dramatic as when I was operating as BY4AOH and BY4CYL from China last March, but still surprisingly different.

Mainly, the shop is still all in boxes. I'm slowly opening boxes and deciding where to put that bit of test gear or inventory and sometimes grimacing, and closing the box back up, hoping the problem will go away. My "incoming" shelves are now larger than my "inventory" shelves, a situation I had hoped never to reach. Ugh.

I'm actually sort of having trouble figuring out how to handle the inventory - caps, resistors, etc. Lots of stuff (e.g. heatsinks, tubes) are too big for those nice Akro-Mills parts bins, so some of it goes into cardboard boxes, but then when stacked, hard to quickly get to exactly the item needed. A logistics problem, more than anything else.

Short of paying big bucks for industrial-grade metal shelving and bins such as one sees in a stockroom, I'm probably just going to stick with the nasty cardboard boxes.

Nice thing, though, about having a separate building for the shop and shack is that finally I have a big enough facility to put them together. So, while I'm working at opening and sorting boxes, the TS-850 sits there listening to whatever band I choose to listen to at the moment. Sometimes ten, sometimes other bands. I've been listening a bit to local nets, just to get a flavor of the interests of the hams in my newfound QTH.

===

BTW, our FD crew proved the worth of the TS-850s. We operated under the callsign AC7FT. An extremely intelligent write-up, by a clearly gifted writer, is found here on the ARRL website:

http://www.arrl.org/contests/soapbox/index.html?con_id=90&call=ac7ft
--- In TS-850_450_690@yahoogroups.com, Bill K0ZL <coorsbill@y...>

The benefits of the great BDR and IMDDR on the '850 can be seen in this example. There were times that we had both TS-850s on HF at the

same time. They were using antennas that shared the same tower, so there was very little isolation from the antennas. If the two radios were on different bands, they did not hear each other (the two rigs were almost back-end to back-end on the same tabletop, so the coaxial cables had plenty of opportunity to "talk" to each other). If we operated both radios on the same band (one on CW, one on SSB, for instance), we could still operate, but we did hear some noise from the other station.

By comparison, we also had an Icom IC-706 and an Icom IC-735 on site. When either of those radios was put on the air on ANY band, it trashed the TS-850. And, if the Kenwood transmitted on any band, the IC-706 or IC-735 receiver was challenged.

Alas, six meters was a good band for us, so we will be using the IC-706 next year as well, but one of the guys plans to build some very narrow filters for it, so the transmitter's broadband noise doesn't cause problems with the HF stations.

But as far as I was concerned, the FD effort really proved the TS-850s "competition-grade" receiver, and the 850s are definitely in our FD plans for next year.

73,

Dave W8NF

August 19, 2005

Hello again !

I have finally found some time to work on my malfunctioning TS-450S.
My latest problem is this :

Everytime I switched on this radio, the RF Gain control acts like as
if it is turned to maximum clockwise position and the S-meter would
actually be pig at the maximum "red" (even though the actual RF Gain
control know is at the maximum counterclokwise position)reading.
After about 10 minutes it would normalized and the S-meter would
slowly drop back to its actual level and I can now hear/receive
audio.

Anyone help me pinpoint the cause of this problem, please?

As a side note : I bought this 450SAT real cheap because the orignal
owner couldn't find a replacement CARrier Unit Board. It cannot
receive or transmit in LSB/USB but AM and FM RX and TX is ok. I have
diagnose the problem to the defective DDS IC on the CARrier Unit. I
still have to order the 2 YM66312. I'm currently using for AM/SW
listening. Used to have a TS-440SAT, my first HF rig but I never
liked it so I sold it a year ago in favor of the 450.

Many thanks in advance.

My TS-450 has the same issue, it happened when someone else
transmitted on a beam aimed at me 20 feet away during field day, he
was not supposed to be on 20 meters.

Because "Advanced Intercept Point" sounds waaay more desirable
than "turning the preamp off"??

I'd say Kenwood sold at least 50 more radios because of that sleight of
hand.... ;-}

# 3490. Re: [TS-850_450_690] TS-850 connection to SM-220

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-08-21 19:31:55 UTC
From: Paul
Topic: 3489  Message: 3490

The SM-220 must be fitted with the BS-8 accessory board in order
for it to function as a band scope (pan adapter).

If the board is fitted, then all you need is an RCA to RCA plug.

Without the BS-8, it's just a o'scope with a trapezoid function for
tuning linear amps.

I used then on my TS-850SAT and TS-930SAT for many years and they worked
well.

The output IF on the TS-850 has an odd affectation. THe level of the IF
signals
is slightly lower on the high side of center frequency, so when sweeping
the band,
the signal peaks on the right (higher frequency) side of the center freq
of the
scope were lower in height, by about 5 to 8 db, than the same sigs on
the left side.

I know that sounded confusing (my better half says I can't write a
grocery list :((

But it works like this... as you tune "up" the band from, say, 7,000.00
Kcs, the
signals will first appear on the right edge of the scope... as you
continue to
tune up, the peaks move towards the center of the scope, until they hit
your pass
band (and you hear them), then as soon as the pass the center frequency,
the peaks
go up in height about 5 to 8 ds as they continue down, the peaks
increase in height
about 5 to 8 db until they fall off the left edge of the scope.

Sounds weird, but I can figure out why - it has nothing to do with what
filter you
have kicked in, it is always the same. That's just the way it is.

It doesn't affect the use or anything else.

It is not anything to worry about - I didn't even notice it for a long time.

Perhaps not too many hams understand the relationship
between intercept point and the preamp; By calling it
AIP, Kenwood marketers undoubtedly wanted to call
attention to the fact that third order intercept point
can be improved by simply turning the preamp off. By
turning a negative into a positive, they raised the
"utility" of the 850 ever so slightly, and indeed,
probably sold some more units because of it.

I guess the auto makers could call seat belts and
airbags "advanced lifesaving devices" and get the same
effect. But that is off-topic.

# 3493. Internal RS232 adapter complete

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-08-22 23:51:13 UTC
From: max_ve3tmt

Well I just finished building and installing the RS232 -> TTL converter using the MAX232 IC as shown in the files section. This time I replaced the external tuner plug on the rear of the 850 with a DB9 female and mounted the converter inside the radio where the VS2 voice synthesizer would set. Power is tapped off the same cable that supplies power to the VS2. Very neat installation and best of all it is inside the rig a'la the TS570 radio. Very nice to use the DX spotting programs and one click and you are there. Only downside is I have to use a data switch to switch between rig control and my RigBlaster to work the digital modes. Open to questions.

Max

my interface just plugs into the 6 pin din, I am not sure why you had to do it your way...
I have an extra if232c for sale, if interested. my sound card interface has NO bearing ont his conection at all.

Dave,

I have built many interfaces in the past, but was not too fussy on the external box with the required power cord and neccessary cable so I decided to build this one inside. The 6 pin plugs aren;t too easy to find. I owned a TS570 and FT920 and liked the idea of an internal converter and went about trying to figure out how to apply it to the 850. Now all that is needed during contests is a standard 9 pin serial cable. I had no use for the external AT connector anyway. What sound card interface are you using? I am using the RigBlaster Plus. I guess I am having trouble trying to get my computer to recognize COM PORT 2. If I can get that to work then I won't have to use the switchbox.

http://www.chiswick.com/

These guys sell the little fold-up cardboard bin
boxes.

Good for tubes and stuff although they are open at the
top, let stuff get dirty over time, a good air
compressor and air gun fixes that.

After following this group and a few others, I have pretty much decided on an 850sat as my next rig. I am an an Icom person, and looking forward to the change. Bill (K0ZL) and his better half were a pleasant sight at all of the Colorado hamfests we used to frequent.

Anyone with a late 850sat from a non smoking home that is looking to sell, please contact me off list/

Thanks in advance

I am thinking it is a DDS problem as the DDS unit is
used to create the USB and LSB BFO; that would cause
the problem.

I am sorry that I don't have any more help or
information for you on this, as I have not seen nor
repaired this problem here yet.

Hello Bill!

I'm glad to conferm the international issue.
However my intension was to reply direct to oz1jux which failed!
I also think that the problem is in the DDS unit and I think a band
solderpoint or perhaps a bad connection could cause the problem.
I told him in danish to manipulate the connectors .

Topic: 3429  Message: 3508

Hi Ole,

Indeed, the flex connectors have been a problem in the
past.

Sometimes also the SMD resistor packs used for the D/A
conversion are at fault and need resoldering.

Thankfully I have seen fewer and fewer DDS chip
failures, perhaps all the "infant mortality" cases are
done.

73!

Does that mean I can breathe easy? I have the original DDS chips on my unit and have nervously been wondering if I have a $350 board in my future.

# 3511. Going Rate for 850SAT?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-08-26 17:31:15 UTC
From: nm9p
Topic: 3511  Message: 3511

Hi everyone,
I have owned a TS-850SAT since 1993 and love it, love it, love it!
But some of my buddies are trying to talk me out of it. (which thy
probably will not be able to do.

I am wondering how much to hold out for?

stats...

Has built in tuner.
Has 270 Hz Narrow CW filter.
50 Million series serial number.
I am original owner. Non-Smoker.

Only mods are for 1) Noise Blanker mod and 2) 60M transmit mod.
No problems with DDS or anything.
Battery has NOT been replaced yet. (I know.... I need to get to that
soon!)

As I said, I love this rig, but could possibly be talked out of it for
the right price. I just want to know how high to go. (I don't want
to set what I think is an "unreasonable" and have them take me up on it!)

Thanks,

Ken - NM9P

# 3512. Re: [TS-850_450_690] Going Rate for 850SAT?

Yahoo group: TS-850_450_690 (2001 — 2005)

From: Zack Widup
Topic: 3511  Message: 3512

I bought mine with the ATU, 500 Hz CW filters and the DRU-2 unit
installed. I paid $900 for it and consider it well worth it, since it was
in immaculate, brand-new condition when I got it.

I did the 60 meter mod but haven't done the noise blanker mod yet. I
think I will do that after the summer VHF+ contesting season is over,
which is keeping me busy repairing and modifying all my UHF/microwave gear
for the next contest.

I see what they go for on eBay, and because they are "old" and
discontinued, it's not much - you can NOT get what its worth, so don't
sell it!

Ken,

Take some good advice, and don't sell your TS-850. You will
be very sorry if you do sell it. I also bought mine new in the early
90's, and even though I have bought many more new HF rigs since
then, I still have my 850 SAT. It is extremely reliable, and seems
to perform better than some of my new "DSP" radio's.
I currently have a new FT-1000 MKV field, TS-2000, IC-746, and
many more smaller radio's - IC-706MK11G, FT-100D, TS-50 S, FT-817 etc.
But I have kept my old faithfulls - TS-850 SAT and TS-440 SAT.

A lot of the newer radio's have been reporting failed finals.
Keep that 850 Ken

Hi Steve, when I asked the same question about the when built I
received this answer from Randy, K9OR.
" First digit minus 2 gives year of manufacture, e.g. 6xxxxx is '94."

That would make your radio a 1990. You can always check with Kenwood to
be sure.

Al, N7IOH

Ken,

I am on my 4th 850 and was lucky to get it. The previous three I always said would be "keepers" but I sold or traded them only to regret it. I am NEVER getting rid of my current one. I have owned many newer rigs with all the bells and whistles and they don't come close to the performance of the 850. There's a reason your buddies want your 850!

For the poster mentioning the price of the DSP100 units being so high, don't waste your money. With a good Heil broadcast mic your 850 will sound better than 75% of the rigs out there. Use the money for a better (read "bigger") antenna or other shack accessoires that will be put to more use. Or better yet send it to me!!

Max

Al,

That would mean my 21 mil series was made in either 1990, but they didn't hit the stores until 1991 and I doubt they made that many before they released them to the general public, or 2000, which is also no as they were discontinued in 1996.

Now you have me curious!.

Max

Not sure, but the idea of the first-digit-minus-two-years rule has been
generally accepted for quite some time.

Perhaps many of them were made in 1990. I think mine begins with a 3,
which I have always accepted as 1991.

The rule works with my Kenwood HT and the Kenwood TS-830 and 940s that I
once owned.

Hi,

To resolve any ambiguity, try looking at the week/year code of
the chips in the rig. This is usually in the form 'yyww' (i.e '9234'
meaning the 34th week of 1992). From this you should be able to work
out the earliest date of manufacture that it could possibly be.

# 3523. Mint TS-850 SAT For Sale...DFW area only

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-08-27 20:07:25 UTC
From: w5lx
Topic: 3523  Message: 3523

I have a Mint Kenwood TS-850 SAT for sale in the DFW area only. I bought this radio new and it has LESS than 10 hours transmit time on it. It has been used very sparingly. No mods or circuit changes have been made to this radio...it is like it came from the factory. Manual and Schematics included. There are no scratches, marks, or dings on it whatsoever. Works like new. Original hand mike (unused) included. 50 million serial number. For pickup only in the Dallas-Ft.
Worth area of North Texas. $795 Pickup only.

August 29, 2005

I was about to post this question myself because my 450 has an odd serial number = only 7 digits and starts with 1212xxx. Poking around I saw that one of the DDS IC on the Carrier Board has "9101" date on it and the other DDS IC has "9434" date code on it which makes my 450 manufactured sometime middle of 1994. I'll check to see if I can still find other IC's on the other boards to accertain the date of my (currently defective) TS450. I guess not all TS450 starts with 3 for the serial number ;-)

Everyone that has sold their 850, has expressed regret
later.

If a sale is unavoidable for some reason, it's "supply
and demand". If someone offered me 1500 for mine, I
would let go of it and buy another, plus a 480! hi

I paid nearly $1900 for same set up when it was new
and that was in '93 I think.

Topic: 3511  Message: 3530

Hi Bill and everyone else,
Thanks to everyone for their responses.
They confirm what I suspected....I would regret getting rid of the ole' 850. Can't find anything elswe like it, new or used, for anywhere near the amount I could get for it.

I paid just a little over $1,825.14 includng sales tax for it in September 1993 (Still have original receipt) from R&L Electronics when they had a branch store in Indianapolis. I guess that would be about the same price as an Icom ProII or III in today's dollars. (I still can't believe I was able to get the XYL to agree to it back then! It was about a month's salary.)

I took over a year, playing and comparing rigs from the "top three" until I decided on the 850. Compared it to Yeasu's 990, and Icom's equivalent rig, (I think it was the 751 or 761?) and none had the performance, panel layout, or other features that the 850 had. I guess History has confirmed my diligent choice.... You don't see the Yeasu 990 or Icom 751 keeping as loyal a following as the TS850. (I just wish I had the same success in choosing cars!)

I'm keeping it! And no looking back. (I just wish it had 6 Meters in it.... But then, I have my 706 MKIIG for that!)

Thanks everyone.....
Keep the airwaves hot!

From: Bill K0ZL
Topic: 3529  Message: 3532

Jim, you are going to be tilting the front panel
forward and then removing most of the flex ribbon
cables from the control unit, and unmounting it and
tilting it forward to get to the battery solder pads
in the back. Then you will need to desolder the batt
and replace it, with a grounded iron, making sure that
the rig itself is not grounded, or you will short the
battery with the iron tip.

Then putting everything back together and possibly
doing a master reset.

Sound like something you want to tackle?

# 3534. SSB Output level. TS-850+DSP-100

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-08-30 19:18:51 UTC
From: Terry
Topic: 3534  Message: 3534

Hi guys,
I am having aproblem setting the output ALC level (REF Page 5 DSP-100 manual) My 850 is running about 120W full whack, but adjusting the level on the back of the DSP-100, doesn't quite allow full ALC. If I turn the PWR on the 850, I can.
EVERYTHING has been checked, the usual DSP 1 and DSP 2 leads and switch settings etc.
I run the mic gain on the DSP unit at exactly 9 o'clock posotion, and have to "speak it up" tp get the ALC to it's end range.

So, is this a problem that has been picked up before, or is because I have tweaked the O/P PWR, or am I going senile!?

TIA

Hi all,

I am a new member since some weeks ago and I enjoy to read your commentary.
I learn more and more interesting things about kenwood rigs.

But unfortunately I have a problem with my 850sat. I have no signal reception on all band and every mods ... The transmission works fine ... I opened the transceiver and I listen a little high-pitched noise near the antenna-tuner. The tuner looks like to work fine so I think it's not a problem with it.
A friend tell me to see near th PA unit, there is a compoment like a whose sometimes pass qrt and cause any problems.
Could you tell me where is the PA unit, because I don't have the technical manual for the moment. I look for it on internet.
If someone had the same problem, any help will be very appreciated ...

Many thanks

Regards

Allan TOMIELLO - France

Most likely caused by failure of D31, part RLS135. It
is a surface mount glass diode, located on the back
side of the RF unit, near the bandpass filter area.

# 3541. Internal tuner question

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-09-02 12:35:25 UTC
From: max_ve3tmt
Topic: 3541  Message: 3541

Sometimes my tuner will not stop when it achieves a ow SWR. It will continue to tune right on past the lowest point. On 40m it will not tune my R7 at all, yet without the tuner in line the SWR is flat at 7.070 Mhz. Is there an adjustment somewhere that is out of sync??

Max

# 3542. Re: [TS-850_450_690] Internal tuner question

Yahoo group: TS-850_450_690 (2001 — 2005)

Max,

I don't see any adjustment procedure at all in the SM
for the AT unit.

Make sure your NULL adjustment is OK, step 24, also
the SWR calibration, using a 150 ohm load, step 37.

# 3543. Speaking of the tuner - squeak and squawk

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-09-03 00:54:17 UTC
From: Dave
Topic: 3541  Message: 3543

My AT tuner squeaks and squawks when it auto-tunes. I read somewhere about disassembling and getting some lube in there. But I'll be darned - I was unable to disassemble it far enough to get to the plastic shafts. Just how far do I have to get it apart? It seemed I was about to bend a metal housing in the attempt, so I backed down.

Anybody got some neato photos to show how this thing comes apart?

TIA

Dave W8NF

Removing the AT unit from the rig completely, only way
to do it. Not that hard Dave.

I have to do the same thing here.

It's not the plastic that is squawking, it's the metal
bushings on the cap shafts that need some oil.

# 3545. TS-450S Interface Cable for PC-Control & Logging Data ?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-09-03 17:06:49 UTC
From: ve9xyz
Topic: 3545  Message: 3545

I've had my TS-450S for less than a year and and now getting around to the idea of using my PC-Logging Application (Amateur Contact Log 2.8) with perform basic tuning and mode information. Also, I've started to think that maybe I should be using Ham Radio Deluxe to control this rig.

I'd be interested in hearing the group's comments on two things:
(1) Where does one buy the interface cable, or does one make this up as a home-brew project?
(2) Are others hapily using Amateur Contact Log 2.8 &/or Ham Radio Deluxe with their TS-450S successfully? Or should I be starting to work with something else before I spend much time on this.

Thanks guys, gals.

the 6 pin din cable i use (at both ends) is from a c64 disk drive along with the if232c

> (2) Are others hapily using Amateur Contact Log 2.8 &/or Ham Radio
> Deluxe with their TS-450S successfully? Or should I be starting to

This depends on what you want to do with the interfacing. I have hrd, but seldom use it, have log(win)eqf, but seldom use it.. my logging program here (dxbase) does the ts440, the 850 and the icom 706mkiig with no problem, but....are you trying to control radio only or have the radio repond to dx spaots...makes a big difference

Topic: 3545  Message: 3547

Kevin,

I use both Ham Radio Deluxe and ACLog with my TS850. Both feature integrated spotting so if you want to work a particular DX station, one click and your rig is there. I built my PC interface and housed it inside the rig where the voice synthesizer board would normally sit. By putting it inside your don't need any cabling other than a 9 pin serial cable between your rig and PC and no power suppy required. But whether you put it in or out, save some money and build your own. The Kenwood version is way too expensive, you can build new for under $30 and have a lot more fun. If you want any other information, e-mail me direct.

Topic: 3548  Message: 3548

I have recently asked for help on this subject and I thank all who responded

Today I have replaced the second capacitor that was said to possibly cause
the display to fail. (C7 on the display board).. I excitedly switched on
and ......... nothing !!.. Both RX and TX working fine but still nothing
on the display..

Please could anybody pass me any more pointers which way to look next ??
Any help would be greatly appreciated ..

Thanks in advance...

Nik

instead of looking where you lost the 13 v, check to see if maybe you have
an open ground side.

I had a TS-850 and sold it.. regreted it....but found a late serial number one 70..
and have two 500 Hz filters and the narrow ssb filter.
I Owned a Yaesu FT 1000 Mark V and a Tentec Orion.
The above radios are excellent and the FT-1000 Mark V at the going rate is a great buy.
But the TS-850 receiver has to have one of the best receivers made.
Great audio and excellent qsk.
Regards! Sergio

Hi !!

Is the IF-10 com interface build in in the TS-450 ? Can i see if my rigg has a rs-232 interface ? Would like to use it with N1MM and Ham Radio Deluxe.

Welcome to the group Rob. You still need a TTL/RS232 converter for
the 450. It is not built in. It plugs into the DIN plug on the left
side of the chasis near the front.

Max

I built one using a 7404 and 1488 and 1489 chips. If I make another one
I'll probably use a MAX232. It's a pretty simple circuit at any rate!

Hi all,

If you want to build it, you can visit this site :
http://tk5ep.free.fr/index_g.htm (all infos and schemas in English ) and
using a MAX232 ...

Regards

Allan TOMIELLO from France

The easiest one to build is in the files section of this very page. I have built 4 or 5 of them with no problems whatsoever. It will fit on a piece of perfboard from Radio Shack. The circuit can be installed in the radio or put in a mini-box. I put mine inside the 850 so there are no cables anywhere except the serial cable coming from the PC.

Max

Very interesting.

I have a Kenwood IF-232 in use with my TS-850S/AT. It workd great. I recently purchased an IC-706MKIIG. Since the IF-232 is a level converter and the IC-17 is the same thing. I wonder if it is possible to take the RX & TX from the IF-232 and connect it to the IC-706MKIIG through the 1/8" jack (ring & tip connections).

What does the group think?

Mark,

One of the circuits I built using the MAX232A and 74LS04 worked on
both my TS850 and my Yaesu FT900 and I believe it worked on my 706MKII
as well. My memory ain't what it used to be.

That is interesting. I thought this might be the case. I'll give it a try. My laptop does not have a 9-pin serial port, only USB. I am thinking about a USB to serial interface for my laptop or putting the interface in the IF-232. This way I can run a USB or serial cable to the IF-232.

Anybody got plans for a USB to serial interface?

Yes you have right.it is funny to build, but if it finish you true it in the corner to all other thing that you have build true the last years. So do many local Hams that I know, I have do it myself build a counter, nearly finish only have to build it in the box and wired the last wires the 2 ports on it.
I use a LCU3-K for my TS850S USB to serial converter and it work great. Only on 10 meter band I can hear some noise from the laptop.

# 3566. TS850sat Display board

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-09-07 16:53:46 UTC
From: Nik Read
Topic: 3566  Message: 3566

Sorry to ask for help again but having found the time to check through the display board I need some assistance!!

The circuit diagram in the service manual does not show parts C18, IC3 and L3 , my question is to do with L3...
Does anyone know its value?, as it appears to be open circuit so I possibly need a replacement.. There is 8v reaching it..

Also what part does L3 play on the board?,

As for the rest of the board, 8V reaches C7 and C16 but does not reach the inverter.
The 5V line seems to be OK..

Any assitance would be appreciated !!..

Thanks in advance,

Nik,
M5DND

I just sold my TS-690S and need to sell some of my other related gear.

I have for sale the Kenwood factory service manual for the TS-450S/690S. I bought it new from Pacific Coast Parts in August 2000. It is just like new as I have never needed it. It was kept in a folder in my desk just in case. It also contains the Service Bulletins, Publication Updates, and the Parts Bulletins as of then. I am asking $30 plus shipping.

I also have for sale the MB-430 mobile mounting bracket for the Kenwood TS-140, TS-430, TS-440, TS-450, TS-690, TS-570, TS-711, TS-811 and maybe other Kenwood radios in this class. The bracket has all the mounting hardware and is almost like new. I bought it from a ham who said it was new and never used but I can barely see where it had been mounted at one time. I have never used it and it does look almost like new. I am asking $30 plus shipping from Payson, AZ 85541.

Thanks, Al, N7IOH

# 3570. Help replacing notch/sql nb board

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-09-14 20:52:23 UTC
From: Steve Foster
Topic: 3570  Message: 3570

I have an friends 850 (haven't found one for me yet!!!) that has a bad nb pot. I have another board with the pot(s) on it. What I need is info on how to adjust vr3 vr4 and vr5 that are on the new board when I install it. All help appreciated.
Thanks
Steve WB5OMP

# 3571. Thanks to Max Donoghue

Thanks to Max for the allignment infor for the nb/notch pcb.
Now I need the slope tune pot. Anyone have one they want to part with?
I have a notch/nb board with a bad nb pot if someone needs it.
Steve

# 3572. M.CH/VFO CH control

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-09-15 02:49:43 UTC
From: rwgreen45
Topic: 3572  Message: 3572

I recently purchased a second TS-850 in the 50 million sequence. It will not go into the memerory channel mode, but will toggle between VFO A and B. While in either VFO A or B the M.CH/VFO Ch control cganges memory channels and does not increment the VFO. The memory channel number is displayed all the time. I have checked the power on function selection under item 4-10-15 on page 35 of the manual but I see no option which would help. Suggestions please. Tnx Bob Green k0idc

# 3573. Re: [TS-850_450_690] M.CH/VFO CH control

From: Bill K0ZL
Topic: 3572  Message: 3573

Try master reset, A=B and power up.

If that fixes it you may have a low memory battery.

bill

# 3574. New Rig, need input

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-09-15 04:54:44 UTC
From: n7ioh
Topic: 3574  Message: 3574

Well I just sold my trusty TS-690S and bought a TS-850SAT and the DSP-100. While I haven't received them yet I thought I would ask a few general questions. First I am not into CW or digital operation at this time so my questions are directed at AM, SSB, and FM operation only. I am not into contesting just general rag chew for the most part. The previous owner of the TS850 says the radio has been gone through by AVVid and has had the DDS chips all upgraded so hopefully no problems. He also said that the stock filters have been *replaced* with the INRAD 2.8kHz in both IF's for a little wider but steeper filtering. Now to my questions.

Having never used a DSP-100 can someone give me some settings (pointers) that seem to work well for the different modes and maybe the different bands if applicable. I have the following mics, Heil GM5, D-104 amplified, Shure 526T, and I think a stock Kenwood hand mic. Any thoughts on these mics or do I need to just try them all? I have another set of INRAD filters that I removed before selling my TS690, I have the 2.1kHz for both IF's. Would using these make much difference based on the the fact that this radio has the IF slope tuning? I don't know if the radio has had the noise blanker mod or the transmit opened up but I believe these are easy to do myself. I am interested in operating on 60 meters so do need to do the mod. I am also looking at using the rig on 6 meters via a transverter. I am looking at the VX50 by Elecraft, any thoughts? I have already bought the TIB from Down East Microwave so the connections should not be a problem. Anything else that is different from the TS450/690 radios that might help me to adjust to this new rig?

Thanks, Al, N7IOH

Al,

I'll throw in my two cents as far as the mics go. Stick with the Heil. It will give you the best overall sound. The D104 will overdrive the 850. I use a Realistic #330-3018 500 ohm dynamic mic with nothing but the high boost and processor and get nice audio reports all the time. Thats one nice thing about the 850, it's hard to make it sound bad. I've used studio mics, external EQ's the whole thing. If not done right, RF will get into the audio. Better to stick with just one good mic and enjoy the radio.

Max

Don't get me wrong. I didn't say the Heil mics were the best choice.
In fact the mic I'm using now cost $49 CDN. And it sounds quite nice.

I know you listed the microphones you have, which did not include the
mc-60 but, just for an fyi, I always had excellent audio reports using
the '60 with the 850. I have also used an amplified 104 with the
850--makes for a great sound when doing AM--just turn down mic gain.

No outboard audio processing used here, nor the high boost/compression
on transceiver.

kr9w,
Eric

I got a copy of the DSP-100 manual today and it looks pretty
simple. I only hope nobody had done any fooling around with the rig.
Thanks for the replies regarding the mics. I am still looking for
feedback concerning transverters and the use of the INRAD 2.1kHz filters
in addition to the INRAD 2.8kHZ filters.

Thanks, Al, n7ioh

Hi Dave, the AT-850 is the internal tuner for the TS-850S. It is an unbalanced tuner that covers 160-10 meters that is controlled by a microprocessor. It was available ether installed from the factory or available separately.

HI All

This is my first post to the list and hope someone can help me out.

I have a TS-450SAT and I'm having a problem with the first character being cut off on cw. W7WHY comes out as M7WHY. I have looked in the manual and don't see any information on changing the time the transmitter comes on when sending CW. I use the VOX for CW. It sounds almost like the ALC is cutting it off or something.

It does the same thing when using the N1MM contest program keying with the computer. The sidetone works fine, but the actual transmission starts a few ms after the transmitter goes into the transmit mode. The CW sounds a little choppy too, not like it should sound. Thanks for any info and 73
Tom W7WHY

I came across an automatic Tuner unit for the TS-850 on eBay, in case
any of you are looking for one.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5810340460&ssPageName=ADME:B:SS:US:1

It is NOT mine, and I have nothing to do with it, and I don't know if
it's a "good price" - I just wanted to mention it in case someone here
can't live without one.

Paul - K2BK

I'm now getting ready to build a PC interface for my TS-450 and realize that the 6-pin DIN socket is on the right-hand side of my rig. Anybody had luck locating a nice right-angle plug for this thing so the interface cable doesn't stick out of the cabinet?

I've looked up the original part at the Kenwood / East coast site and the part (E07-0654-05 IF-232C 6PIN DIN PLUG) doesn't mention whether or not it's an angles connector or not.

Thanks,

Kevin VE9-XYZ

It is not an angle connector Kevin. I don't recall ever seeing one. I took some slack earlier for putting the interface INSIDE my 850 and replacing the external tuner connector with a DB9. Straight serial cable from the PC to the radio. Best mod I ever did.

Max

# 3598. Kenwood DRU-2 Digital Record/Playback Unit for TS-850S

Yahoo group: TS-850_450_690 (2001 — 2005)

Good morning gang.

I have a Kenwood DRU-2 Digital Record/Playback Unit for TS-850S that I don't need and want to sell.

The last one I saw go on eBay went for $110...

If anyone wants this DRU-2, drop me a line directly at:

<condor@...>

... and we can work it out.

Paul - K2BK

# 3599. How Do I Interpret This Data?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-09-26 03:51:58 UTC
From: n5kzw
Topic: 3599  Message: 3599

Recently, one of the ham newsgroups had a discussion about looking at WWV with PSK to check USB/LSB offsets. I tried that with a TS-450S, but couldn't get any detailed data, so I ran the sound card through Spectran (check Google). The application made it pretty easy to check the reception in USB and LSB for 1000 hz, 500 Hz, and 600 Hz. (I did not check at 440Hz.) It showed serious power in frequencies other than the main tone in LSB. The LSB audio was significantly distorted compared to the USB audio.

In a nutshell, both USB and LSB were within a few HZ of each other when the rig was cold, and they converged to the same frequency when the rig had warmed up for several hours. Both USB and LSB showed to be off between 35 to 55 Hz (depending on the temperature of the rig). Spectran reported spurious signals received at the second and third harmonic of the main tone. I did not try swapping out rigs to see if this was caused by the radio or the SW/HW.

As an example, when receiving the 500Hz tone from WWV, USB showed the main tone at 535.5Hz (-38.4dB), with spurious tones at 462.8Hz (-65.7dB) and 1036.1Hz (-56.1dB). When switching to LSB, the tone at 462.8Hz jumped from -65.7dB to -47dB, the main tone at 535.5Hz dropped from -38.4dB to -45.5dB), a new tone popped up at 963.4Hz (-62.6dB), and the tone at 1036.1Hz dropped from -56.1dB to -62.2dB. (I am presenting the figures as reported by Spectran, they may indicate an accuracy that is beyond that which can be delivered by the software and hardware. The frequency resolution was set at 2.7Hz.)

So, what sort of figures should I be seeing from a TS-450S with this SW/HW setup? I am definitely hearing distortion on LSB, so where should I start looking to fix it?

Thanks,
Ed - N5KZW

The distortion on the DDS carrier generated rigs are
usually caused by a bad DDS unit, which in turn is
usually caused by bad solder joints on the resistor
pack used in the d/a converter in that unit.

Usually if LSB is affected, I would expect USB to be
affected as well, but "it all depends"...

Thanks for the advice, Bill. I'll take a look at it as soon as I
finish checking out the relays in the ATU on the other TS-450.

If I can get my mind around what I'm seeing on the Spectran display,
I might try coming up with an article for QST.

Regards,
Ed

I know what it means, but if I understand correctly when the AIP is off, the rx preamp is on?? Is is normal practice to run the AIP on, ie preamp off?

Max

# 3607. Re: [TS-850_450_690] Please explain AIP

Yep.

AIP is "advanced intercept point"... you can only
improve the intercept point by turning the preamp OFF.
Thus "on" really means "off" and "off" means "on". And
everything I say is untrue. Except that. Which means
nothing is true... no, wait a minute...uh...

oh never mind.

On my Kenwood TM-733A and TM-D700A, it claims to reduce the
problems of intermod in high RF environments, such as big cities.
They apply it only to the VHF side of the radio for some reason.

Date: 2005-09-27 09:52:56 UTC
From: Richard Ferch
Topic: 3606  Message: 3609

The normal practice depends on the frequency and on the radio, but to summarize: turn the preamp off (AIP on) all the time on lower HF frequencies, and on higher frequencies turn AIP on any time the band is crowded and there are lots of signals around, in order to reduce IMD.

On the TS-850, on 40, 80 and 160 (actually, 9.5 MHz is where the 850 switches automatically), AIP is normally on, because atmospheric noise levels are sufficiently high at low frequencies that adding a preamp does you no good. It amplifies the noise as well as the signals, so it does not help the signal-to-noise ratio. On higher frequencies, when the bands are quiet a preamp may help sometimes. For example, if the band is very quiet and the noise is dominated by internally-created noise in the receiver, as is often the case on 10m, a preamp can improve sensitivity.

However, on all frequencies using a preamp degrades dynamic range, so on any band if there are nearby strong signals (such as often happens during a contest), switching the preamp off (AIP on) can improve the receiver's performance. In some cases, even the AIP is not enough, and you can improve receiver performance even more by using the attenuator. For example, when chasing DX on 80 meters, I sometimes find it easier to hear weak signals by using the attenuator.

I don't have a lot of experience using a 450 myself, but according to the ARRL reviews of these radios, on the 450 and 690 you may need to use the AIP on all bands at any time the band is wide open. This is because the dynamic range of the receiver in these radios is not as good as in the 850, and turning AIP on may be necessary to remove spurious IMD products (phantom signals). So the best practice might be to leave AIP on all the time, except for those occasions where the band is quiet, you need a little more sensitivity and there aren't a bunch of other signals around to create IMD.

Good advice; this should be the AIP FAQ for the group,
hi!

You end up with a "direct feed mixer" radio when AIP
is ON, as in the earlier TenTecs.

By the way, the 850 has two types of preamp: A circuit
using two junction FETS in parallel (for more overload
resistance) for 20M and lower in frequency, and a dual
gate FET (for more gain) at 17M and above. Switching
is automatic as you go up in frequency.

# 3611. Missing Service Bulletins

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-09-27 18:22:24 UTC
From: n5kzw
Topic: 3611  Message: 3611

I just browsed all of the service bulletins on the Kenwood web site, downloading those for my Kenwood rigs. In the index, they list two bulletins (ASB0994 and ASB1036) for the TS-450S that do no appear in the download list. Does anyone have an idea as to what might have happened to these? They don't appear to have beeb superceded.

I am also looking for ASB0882 (TS-430S) and ASB0010 (TR-7400A).

Thanks,
Ed - N5KZW

Hi Ed, I just happen to have the factory service manual for sale and it came with the two service bulletins you are looking for. The ASB-994 subject, TS-450/TS-690 Distorted TX Audio with TNC. The ASB-1036 subject, TS-450S parts change. I have no clue as to what happened to them as far as Kenwood is concerned. As I have not sold the manual yet if you or anyone else would like a copy of these two bulletins I would be happy to copy them and send them off. I don't have a scanner so I have to do it the old fashion way.

I guess I should have looked at the bulletin ASB-1036 a little closer. The parts change is related to the Driver Transistor being no longer available and it gives the replacement transistor number and the other parts needed to make the new transistor work. Also there is a schematic showing the placement of the new parts in the circuit. I would think this would be important to keep in the Kenwood reference directory.

And this is why I remain subscribed to this group,
everyonce in a while a gem like this comes along...
But my 850 remains in it's double box.
Some day I'll send it to you Bill,
but I just enrolled in Night School, so
perhaps- when that's done and I have a steady
stream of clients, I'll massage my 850 back to
QRV status once again. Thank goodness
Massage Therapy is only a 14 month course.

Subject: Re: Please explain AIP

Yep.

AIP is "advanced intercept point"... you can only
improve the intercept point by turning the preamp OFF.
Thus "on" really means "off" and "off" means "on". And
everything I say is untrue. Except that. Which means
nothing is true... no, wait a minute...uh...

oh never mind.

# 3617. Processor, Good AM - SSB Audio on my TS-450S

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-09-28 11:12:00 UTC
From: ve9xyz
Topic: 3617  Message: 3617

I'd be interested in hearing from some more experienced operators of how, exactly, they adjust the TS-450 for best audio. In particular,

AM Operation:
- do most of us use the Processor function full-time (seems to boost overall level on mine, nothing more)
- If I monitor my transmission on any decent-quality portable radio in the shack it seems distorted to me unles the RF output adjustment is set very low - this could be receiver overload, overactove Proc , or just poor AM design - ?
- An old-time user once advised me to set the AM mode up by adjusting CAR during dead carrier at 10-15 W and then adjusting Mic gain for in-range ALC deflection. By contrast, the manual speaks about setting up S9 (on S-Meter scale)fpor dead carrier, and modulating to +20 mark.

SSB seems a little easier:
- Max RF output, Proc on, and healthy adjustment of Mic for good ALC deflection, right?
- It doesn't seem to matter that I modulate beyond the ALC range - I'm still getting good sig reports

Anyways, you guys with a lot of past experiences might share some practical experience on this subject.

Thanks,

Kevin VE9-XYZ

# 3618. Re: [TS-850_450_690] Processor, Good AM - SSB Audio on my TS-450S

Yahoo group: TS-850_450_690 (2001 — 2005)

From: Bill K0ZL
Topic: 3617  Message: 3618

SEt the rig for 25-30 watts, then adjust the mic gain
until your ALC is JUST kicking a little on SOME voice
peaks.

Better yet, set your "PEAK HOLD" feature ON, and then
"talk up" your mic until you are just barely lighting
the 100 watt mark (or whatever your rig PEP max output
is, as measured on FM or CW mode).

The 450 makes great audio on AM, as do all the current
and recent JA radios. They sound as good as or better
in most cases than "boat anchor" AM.

If you want more power, get a small linear (AL-811 or
811H, or any of the 2-572B amps, or a single
3-500Z)... run the amp on the LOW Or CW or TUNE
setting to lower the plate voltage and dissipation;
tune for max output, then set your transceiver as
above. Then you will be as loud as my Johnson Valiant,
and sound a lot better.

Don't try using a local receiver for monitoring unless
you have it heavily attenuated or better yet, antenna
shorted to ground, hi!

A scope is best for monitoring the output of an AM
rig.

# 3619. Never Again!!

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-09-28 17:22:37 UTC
From: Dennis Steele
Topic: 3619  Message: 3619

I bought a brand new TS850SAT around 1997 or so and used it for a couple of years. I live in an apartment with a small backyard, so I stuck a Hygain 14AVQ into the flower-bed (by a 7' brick wall), and proceeded to work cw stations all over the world. Being a old Navy op, CW is my preferred mode of transmission, so a less than optimal antenna works out ok..

Then, I sold the rig about 4 years later. I had taken perfect care of the rig, so whoever bought (I don't remember who they are now), got a great rig.

Well, you know how it is. You get off the air for a while, get busy with other things, retire from you job and then start thinking about ham radio again! At least that's how it happened to me. So, I went off to eBay for a look at Kenwood rigs. I'd check the listings every now and then, but the TS850 was always in the back of my mind. I had owned one, it was solid state and worked pretty well.

Finally about 2 weeks ago, I checked eBay and there was a TS850SAT for $525 with 19 minutes to go on the auction. I entered a bid and put $600 as my "top end" offer. I wound up paying $585 for the rig "delivered". It turns out to be a jewel as well. Has the 500 cw filter intalled and the hand mic (although I don't use SSB at all). Cosmetically the rig is a 9. Functionally, a 10.

So I've learned my lesson. When will I sell this rig?? Never again!!

Dennis K6KRV

Very good move Dennis...

The bad thing about selling an 850 is they don't go for much...
... the good thing about buying a used TS-850 is they don't
go for much.

An 850 is the best $600 you can spend today - many of the newer
rigs are lame in performance compared to the 850.

I bought mine new and I paid the going full price, plus I filled it with
the TXCO, two 500cps CW filters, the 1.8 SSB filter, the DRU-2
record/play, and the PS-"whatever" speech module.

I have had it for about 13 years and it has never hiccuped once.
It has often been on 24/7 for months at a time, and the
TXCO has drifted 9 (NINE!!) cps in the past 13 years.

It is hooked up to a HAL 8650 RTTY machine, an
MC-90 mic, and a Vibroplex Original and just keeps on ticking :-)

Though I just got a new Icom 756 Pro-III, I will NEVER sell
the TS-850-SAT.

yes very good deal.
i have two ts 850sat's and two ts 950dx's and loaded them with filters and dr 2's also when i get them new. set me back a war pension. anyway. i was talking to a kenwood service rep last month and we were talking about a problem i had with my ts 570s and we got talking about the polling problem with the 950 and 850's with N1MM software. he told me i should open up both of my 850s and check the caps on a couple of the boards for a black fluid coming out of the bottom of them. said there were 16 caps on the board. i have the info at work. i plan of pulling both of mine out of service and checking. anyone else heard of this. ?

I had a 450 and 850 at the same time once. Never should have got rid
of the set. In fact I have bought and sold three TS850's and now have
my fourth in the shack. As you said Dennis, "never again!"

I think hams are starting to see the value in the 850. Very little
problems to speak of, and they are not too badly priced used. One of
the best receivers ever produced, and more features than you can shake
a stick at. I use a PC based audio DSP program which really helps
during the noisy conditions. I have uploaded it into the files area if
anyone wants to give it a try. DSP is about the only thing the 850 lacks.

It is very interesting to compare the QST reviews of the 850 with the $10,000 IC-7800. The blocking dynamic range at 20kHz and minimum discernable signal are both much better on the 850. The combination of higher sensitivity and greater dynamic range says a lot for the rig!

# 3631. MC-50

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-09-29 21:12:19 UTC
From: Gary Tuck
Topic: 3631  Message: 3631

There was, or is, a 4 pin to 8 pin mike adapter that allowed the MC-50 to used with the TS-850. At least that is my recollection. Seems like I used the MC-50 with my 850s for a while before buying a MC-80. Then hardly used either one. As QST said in 1991, the 850s was the best CW rig made to date--irrespective of cost.

# 3632. Filter Mounting for 850

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-01 01:35:04 UTC
From: au20061
Topic: 3632  Message: 3632

I am adding two filters to my 850 and the mounting screws are missing.
Does anyone know what size screws to use?

Thanks

Tom K4KFN

Topic: 3632  Message: 3633

Hi Tom, I just got my 850 yesterday and opened it up to get the screw info for you and all of mine are missing also. I did check a known screw I have from my Yaesu and I can tell you that the screw is a, M3 x ?mm x ⋆.⋆50 thread pitch but I don't have a sample screw to get the length from. I would guess about 5 or 6 milliimeters long as I measured from the top of the filter board to the top of the circuit board. You can take a screw from the case with you to Ace hardware to match up as it fits the filter mounting fitting and is about the right length. I hope this helps some.

Make that 2.5 mm sorry..

check any junque radios you have around the place, the
PC board mounting screws or the screws holding the PA
module, or other modules to cast alum. frame are
usually the right size.

From: Vinnie
Topic: 3636  Message: 3636

Hi. My friend has a TS-850S where the display lights keep going out. He does the reset procedure listed in the manual, and then they come back on. Other than that, the functions of the radio is normal, even when the lights are off.

Does anyone know what can cause or if there is any fix?

Thanks, Vinnie.

PS: I am posting for him because his computer crashed.

# 3638. Symptoms of a dying battery....

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-01 19:01:10 UTC
From: max_ve3tmt
Topic: 3638  Message: 3638

I've since changed it but over the last few days, here are my symptoms..

The S meter would quit, the slope tune wouldn't work, and no PC control to the rig. Occaisonally it would stick in transmit. I have but a new battery in and await the results. Just wondering if anyone else experienced these problems.

From: Bill K0ZL
Topic: 3642  Message: 3643

I have same problem. But, if you brighten the tube too
much, you will have bleed-through of the un-lit
segments of the display.

8v is fed to the HV converter for the tube and about
330v p-p square wave comes out; don't know if boosting
the 8v would do the trick, or if we need to look for a
better tube. It's a CFL or cold fluorescent tube.

BTW the dimmer circuit works by shutting the 330v P-P
square wave off and on like a blinker but very fast;
so the effect is that the tube dims a bit.

Hi Mark, instead of trying to brighten the display, you might try letting more light pass through the lens. You might be able to replace the dark red lens with a different color lens, lighter red, or a thiner red lens thus allowing more of the light to pass. I have seen some light blue lens on the Drakes and they look great and some radios are using an amber color now. You could even get a different color for each day, naaa.

Max is right. That is the place to get it, but don't waste your time soldering all those pins. Order part #13D for $6.95(US) that has all 13 pins soldered to a 6 foot cable.

I checked that part # out Ken, it doesn't look like he uses shielded cable on the audio lines. That would be my only concern. The connectors are cheap enough, I usually buy a few spares and snip off the pins not needed for the particular job in hand. Gives you a little more room for soldering. I usually hold the connector lightly in a pair of vise-grips on the bench while I solder the pins. The vise-grips are heavy enough so it won't slide around on you.

The best hint that I was given was to get a female RS-232 connector kit and connect your wires to the female contacts, then slide the contacts on the back of the DIN pins. Some small heat shrink tubing gives a little boost to the contact pressure. Make sure you get a good strain relief between the connector and the cable.

Regards,
Ed

Subject: [TS-850_450_690] Kenwood IF232c

I have just got an IF232c interface and I'm just wondering if any one could
tell me the polarity of the 13.8Vdc into it. It is not shown on the case or
the paper work and not wishing to damage it I appeal for Help!!!!..

Thanks in advance..

Nik M5DND

From: Nik Read
Topic: 3659  Message: 3661

Thanks Mark,

Would You belive that the Instruction Manual that comes with the IF232c
does not show this info but when I looked it up on the net and found the
Manual there it shows it!!!..

The line in question is on Page 3 and says: Supply Voltage 13.8VDC +- 15%

The web version says : Supply Voltage 13.8VDC +- 15% *( Centre Pin
Positive)

Typical!!!..

Many thanks anyway.. It now works brilliantly....

Cheer's
Nik M5DND

# 3662. CAT problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-16 22:48:48 UTC
From: pa0mir
Topic: 3662  Message: 3662

Hi,

RIG: TS450
CAT: homebrew with 7404 and MAX232
tried different computers, all the same problem
In september before leaving for 9H all was fine
Had a working CAT interface, doing everything fine
Now back and putting station together again no frequency readout anymore.
After my holiday put everything together again but now the RIG does listen to the CAT but does not give any replies to the computer. Yet the path back is working, tested when putting a signal backward.
So give a command, rig listens e.g. QSY or change mode
But ask frequency rig does not give out information
Anybody has an idea as to this point? Checked every setting and connection, but found nothing amiss.

# 3663. TS-850S Question

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-17 22:41:30 UTC
From: Mike Thornton
Topic: 3663  Message: 3663

Hi everybody. This is Mike, WC0L. I'm new to the group, but have operated Kenwood gear for years. I currently have an 830 station, a 2000 and a 480. I am hoping to add an 850 to the shack one of these days. Does anyone have any thoughts on any 850 serial numbers that should be avoided? I have seen lots of stuff on the internet about certain ICs that were superseded by better ICs somewhere along the line, but have no idea as to the serial number at which any significant product improvements might have become effective. I would appreciate any thoughts you might have along these lines, as well as any other advice you might have on picking out a good 850.

Thanks very much and 73,
Mike, WC0L

Hi Mike, this question was asked a while back and if memory serves me right it was stated to just look for one in good cosmetic shape and to not worry about the serial numbers. You might want to sure it is from a non smoking environment. You could go back in the archives doing a search probably 6 months or less. I think Bill, K0ZL was the person that gave that advise based on his experience in working on them and owning one. Welcome to the group.

Hi Mike,

I had a 10 mil, a 20 mil, a 30 mil and a 50 mil series 850 and couldn't see any differences performance wise between any of them. Of course the older the rig, the chances are the battery may need replacing if it has not already been done. The only major gripe I have had with 2 of my 850's was the SSB monitor quitting. My current 850 suffers from this same problem and I'm not sure what causes it. As long as you get one in good cosmetic shape it should last you a long time.

The serial numbers to avoid belong to the rigs that
have been in smoker's homes, floods, and other stuff
that is hard to recover a rig from, hi!

I have an "Original" that has been through three
lightning hits, 10 field days, numerous camping trips
and what not, and is still cooking.

Find a low-hour rig that looks good.

73,

Bill K0ZL

# 3671. New poll for TS-850_450_690

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-18 20:42:42 UTC
From: TS-850_450_690@yahoogroups.com
Topic: 424  Message: 3671

Enter your vote today! A new poll has been created for the
TS-850_450_690 group:

If you are in favour of a weekly net for our group, what band would you prefer to hold the net on?

Current propogation and antenna availability will play factors in your decision.

o 75 meters
o 40 meters
o 20 meters
o 17 meters
o 15 meters

To vote, please visit the following web page:
http://groups.yahoo.com/group/TS-850_450_690/surveys?id=12163796

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

# 3672. Re: [TS-850_450_690] New poll for TS-850_450_690

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-18 20:48:25 UTC
From: Paul
Topic: 424  Message: 3672

I just voted for 20 meters, but there was no second choice, so my second choice would be 40 meters in some open spot in the night time jungle of international broadcasts.

It would probably give the best coverage, as 20 would have dead spots from twenty to several hundred miles because of the lack of near field propagation.

Paul - K2BK

# 3674. Re: [TS-850_450_690] New poll for TS-850_450_690

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-18 21:29:00 UTC
From: Paul
Topic: 424  Message: 3674

75 is doable if we are all in the same part of the country.

I think 40 would give better coverage, and there ARE empty slots between
around 7.220 to 7.295.

# 3675. Re: TS-850S Question

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-18 21:27:52 UTC
From: k9or@comcast.net
Topic: 3663  Message: 3675

Mike,

I concur with the other sage advice given here. The 850 is a great radio. I would refer you to this group's archives, and to the web pages of N6TR, K0BX, and TK5EP for everything you need to know about 850 glitches, repairs, mods etc.

The only serial # issue I'm aware of is for 2xxx. While not all 2xxx models suffered, there were some problems with the DDS board on the CAR unit. The newer chips are 66312, the older ones say 6631. I have never seen anything more definitive on progressive enhancements by model year/serial # - if anyone has such info, please share.

73 Randy K9OR

Kind of a hard way to make a coax choke.

That sounds like some good coax. Hardline by chance?

It would seem to me that the problems with the DDS chips being prone to failure in the early 850s should have sorted itself out by now.

In other words, if an early 850 should have a DDS chip failure now, how could it be termed premature? The rig is 15 years old! Seems to me any bad early ones should have been weeded out by now.

Just a thought!
73,

Not quite Bill...caught it with my weed eater using a brush blade.
The mower would have chewed it to pieces as it has two blades.
Takes a lot to stall that 17hp Briggs....
Still ticked me off...especially when I had 3 hours to go to get that
part of the yardwork done. I know it got the jacket and part of the
braid.

I wish...rg-213.
Just barely caught it when I realized it was there...
Not down to the center conductor but deep enough.
Just glad it wasn't my LMR-600 !!

73,
Jon

Kind of a hard way to make a coax choke.

That sounds like some good coax. Hardline by chance?

I was going to try that and see how the analyzer reacted
before hooking it up to anything else. If it looks bad I'll
just drag out an extra coil of RG-8 and replace that section.

I guess I'll need to take the time to dig that trench and lay some
4" PVC between the hose and tower to run coax in. I'm not sure
how I'll handle my 7/8" heliax when I get that.

73,
Jon

Just tape the heck out of it and call it good! hi...

I have a couple such "bandages" on my 20M loop
feedline. I use Scotch brand type 70 silicone tape,
then 33 on top of that. Never fails.

From: n7ioh
Topic: 3666  Message: 3691

Hi all, I would have to agree that 20 meters would most likely be our best bet for a world wide weekly net. I just checked to see what our current membership is and it was 629 members. That would make one heck of a round table, hi hi. Something else to consider is if the group was to be able to meet at a time and day that falls on the weekend everywhere there would be less of a conflict for those who have to work. Here is another thought, we could have 2 weekly nets at different times so as to accommodate more of out members. Maybe some of you who do a lot of DX chasing could recommend some good times and days that might be better for our group to meet. I don't normally operate on 20 meters, I'm more of a 40 and 75 meter guy so I don't know what frequencies or times would be best to use there. I just voted on the band choice and I see only 11 of us have voted so far. I would think the more votes received, the higher the interest in starting a net. If only 10 or 20 members out of over 600 members want a net that's not a very good showing. Just my thoughts on the group net.

If held after us ordinary people on the west coast are home from work,
20 does not propagate eastward, either.

For dependable propagation around the entire country, 30 meters would
be best, but since this is a Kenwood group, it's not likely a CW crowd ;)

Dave W8NF (/7, if you insist)

# 3694. Re: [TS-850_450_690] Anyone interested in a group net?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-19 19:15:36 UTC
From: Mark Saunders
Topic: 3666  Message: 3694

I posted a message last night that I was listening at 7.280 if anyone wanted to try it for our Kenwood net.

I heard no list member stations, but I did have a nice 3-way QSO with Joe, KK6BS in San Diego and Brian, N7PGT in Oregon. All three stations were running 100w, they were horizontally polorized and I was vertically polorized. Our signals were S9+, Joe +20 and Brian +10. Excellent copy with the narrow SSB filter.

Somewhere between 0300 and 0400 UTC, a BC station started above us and the narrow filter really helped as did the slope tune.

I'm not much of a Phones guy and spend most of my time on CW, but a Kenwood net could be fun.

Mark,

I heard you and Joe on the freq but I had a high noise level at the time. I am beginning to think 20m might be the best choice.

From: Mark Saunders
Topic: 3666  Message: 3698

I burried a 3" PVC pipe from my house to where my tower will be and now I wish I had used 4" pipe. Oh well, I'm not going to dig it up now. I will probably lay a 4" pipe also.

That LMR stuff is expensive, but the thing to use, especially if you have a long run from the shack to to antennas.

I agree Al, only 12 replies so far. Cast your vote guys, don't be shy.
I think it would be great to "talk" to each other on the air.

For lower frequencies, you can use homebrew open wire. The loss characteristics are akin to LMR-1200. N6RK's website shows his way of supporting them. Around here, I'd have to make sure mine are suspended high enough that the "rent-a-farmer" who is 93 years old who tills our fields, won't clobber them with his tractor.

I've heard of others who've run out of room with the underground pipe routine. What I think I'm going to try is to run a messenger cable at a good height, and then hang the coaxial cables from it. Any coax we normally use is UV-inhibted, but rotor cable may become an issue. I'll just try it and see how it works out.

I'm sure it's situationally dependent. In my case, I have lots of trees, and trying to bury something amidst the mass of roots does not sound fun. But hiding a messenger line in them doesn't sound too bad.

Don't worry about polarization. Once a signal has been refracted by the ionosphere, the polarization has been skewed and scintillated. I once had a 40 meter dipole and a vertical, and fed one to each of two receivers, then found signals to listen to. Quite fascinating hearing a signal warble in strength and phase from one RX to the other as the polarization went through cycles through the atmosphere. Unless it was a weak signal, it was never absent in either receiver. Local signals were stable, but anything that came from more than 20 miles away had the scintillations.

Instead of a 90 deg elbow common to plumbing PVC, use
the electrical PVC conduit elbow instead. Has a big
radius that the 7/8 will navigate easily.

I want to get in on this net also. Give me a time and place and I will try. I do not get off work until 02:00Z so 03:00Z would work for me. BTW do you realy run your coax from the "hose to tower" I thought you are trying to keep it dry HI HI.

From: KD5SFA
Topic: 3666  Message: 3705

I like that idea....the grey pvc is more UV resistant
than the white is so it should last longer to. That and
the heliax likes a nice gradual bend...about 11" radius
if I recall....not to mention leaving at least one or two
pull lines in there for future expansion the curved elbows
will make pulling new coax so much easier.

Thanks for the idea Bill !!

73,
Jon

# 3706. Re: [TS-850_450_690] Re: Anyone interested in a group net?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-20 14:54:42 UTC
From: Frank Heffner
Topic: 3666  Message: 3706

Hi all,

I would like to agree with 20 meters for several reasons. First of all,there are Kenwood owners all over the world and among us there is a high percentage of TS-850 owners. Those of us who live in Europe(except for the U.K.) as I do can not operate above 7100 MHz. My suggestion would be to operate on 7280 for the state side and Canadian guys and have a frequency on 20 for the world wide net. The two nets could be on the same day at different times or on different days at different times. 10 and 15 would not be a viable option as we are bottoming out in the sun spot cycle. I think once we got a net going with a small group of Kenwood owners it would take off in due time. Even none owners could jump in have a go. Sounds like we could have a lot of fun. Just because we only have 11 votes so far, don't think there isn't any interest or we are not reading the mail!

Best 73 to all the group, Frank
WI2R,DL1RW,OE7RWI

I agree Al, only 12 replies so far. Cast your vote guys, don't be shy.
I think it would be great to "talk" to each other on the air.

Max

Probably because that is where it started as a general
comment on my part due to a recent yardwork incident.

OK ;))

On that light - I have just moved to this QTH and right now I have 5
pieces of coax lying in the grass with orders to my son to not mow over
the coax - so the yard looks like it has a Mohawk haircut to the garage.

I had thought of burying the coax but was told that it would not survive
the winter heave. Thought of putting in a 4"-ish piece of PVC but I'm
afraid that it will fill with water and freeze, or that chipmunks will
get inside and chew up the coax to make new "digs".

Any suggestions.

# 3710. Re: [TS-850_450_690]Outdoor buried coax

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-20 15:29:19 UTC
From: KD5SFA
Topic: 3708  Message: 3710

If you do the PVC be sure and put elbows on the exposed
portion so that the ends are pointing down (will keep rain
out of the pipe). I would also stuff the ends with steel wool
to keep small varmits out (mice, rats, wasps, etc.).

Others may have better ideas.

73,
Jon
KD5SFA

OK ;))

On that light - I have just moved to this QTH and right now I have 5
pieces of coax lying in the grass with orders to my son to not mow over
the coax - so the yard looks like it has a Mohawk haircut to the garage.

I had thought of burying the coax but was told that it would not survive
the winter heave. Thought of putting in a 4"-ish piece of PVC but I'm
afraid that it will fill with water and freeze, or that chipmunks will
get inside and chew up the coax to make new "digs".

Any suggestions.

# 3711. Re: [TS-850_450_690]Outdoor buried coax

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-20 15:34:22 UTC
From: Fred Van Veen
Topic: 3708  Message: 3711

I buried about 30 feet of RG-58 almost 10 years ago, from the house
to a homebrew 20-meter vertical. There has been no problem
whatsoever. The coax is a couple of inches below the lawn and it is
not protected by PVC or anything. The ground below the lawn is sandy,
with good drainage.
Of course they make coax specifically for burying, but why not just
bury what you have and see what happens?

# 3712. Re: [TS-850_450_690]Outdoor buried coax

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-20 15:42:31 UTC
From: n7ioh
Topic: 3708  Message: 3712

Hi Paul, two thoughts on the chipmunks. One, try posting no chipmunks allowed signs and see if that works. Two, I have heard that placing moth balls in areas you don't want critters to nest in works but I don't know if the moth balls would have any affect on the coax such as deterioration. Maybe a combination of one and two?

Leave it flat on the ground. if undisturbed, the grass
will grow over it and there will be no problem with
the mower. Also set the mower a little higher; it's
better for your lawn anyway.

When in doubt, MODIFY...

# 3714. Re: [TS-850_450_690]Outdoor buried coax

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-20 16:01:05 UTC
From: Paul
Topic: 3708  Message: 3714

Well... that's what I thought.
Plus being fundamentally lazy, I figure that if it's doing OK where it
is, just
leave it and do something else that's important, like playing radio.

But the better half says it looks "Icky", and she is an extra class ham
too!!!

Wymin, go figure!

Topic: 3666  Message: 3715

ROLAND!!! You've done it bloke!!! You solved my problem!!!

If I feed my rotor cable inside ordinary garden hose, then it is now protected from the sun. And so would be the 100BaseT cable that I wish to run from the house to the shack.

Thank you! Thank you! Thank you! Thank you! Thank you!

Topic: 3666  Message: 3717

Frank thank you for the reminder. 40 meters is a patchwork quilt (as
is 80 and 160) and finding a frequency where all can use is a challenge.

all,there are Kenwood owners all over the world and among us there is
a high percentage of TS-850 owners. Those of us who live in
Europe(except for the U.K.) as I do can not operate above 7100 MHz.
My suggestion would be to operate on 7280 for the state side and
Canadian guys and have a frequency on 20 for the world wide net. The
two nets could be on the same day at different times or on different
days at different times. 10 and 15 would not be a viable option as we
are bottoming out in the sun spot cycle. I think once we got a net
going with a small group of Kenwood owners it would take off in due
time. Even none owners could jump in have a go. Sounds like we could
have a lot of fun. Just because we only have 11 votes so far, don't
think there isn't any interest or we are not reading the mail!

# 3718. Re: Outdoor buried coax

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-20 16:56:54 UTC
From: Dave
Topic: 3708  Message: 3718

That's a variation of a popular way to install radials:

1) Mow grass very short, using a bag
2) Rake like crazy to get up even the grass clippings that you thought
the mower was bagging
3) Lay radials or coax on ground. Use 1" staples to hold it in place.
Unplated steel is best - you want them to rust.
4) Fertilize and water thorougly for a few months. Note that this is
in direct contrast to my normal advice on grass, which is to use zero
fertilizer, which makes it not require water, and also not require
water. I call this "God's own landscaping". Not allowed if you live
in a CC&R-controlled neighborhood, but if you live in one of those,
you probably can't have antennas, either
5) Raise up mower, use in mulch mode.

After two mowings, even you will have difficulty finding the radials/coax.

In my present QTH, my plan is to hoist the vertical up in the air.
But temporarily it's on the ground with radials simply laid atop the
existing grass (more properly described as mowed weeds). During the
summer, with no water or fertilizer, we only had to mow once. But
when I went to roll up the radials, I had difficulty finding them,
even though I'd not attempted to make it difficult.

# 3719. Buried Coax

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-20 19:47:44 UTC
From: aa0bl
Topic: 3719  Message: 3719

When you lay out your PVC run, try using 2-45 degree bends with about a foot of straight pipe between to make a 90 degree bend. It sure makes it a lot easier to pull the run of coax. I prefer to use thin wall 4" PVC. It has been in the ground about 20 years with no difficulties.

Art, AA0BL

Just out of curiosity as I have been considering a better rf ground system than currently in place, are the radials bare Cu wire or do you leave the shielding on?

The best way to lay in Buried Coax for a low cost and easy solution
is to use the black flexi sprinkler pipe as the main conduit.
No need to cut and splice and then "meld" seal like in ridged PVC
conduit
The stuff is cost efficient easy to bury and last for years and
years even in ground heave conditions, just use your shop vac as a
blower to "blow in" a drag line light weight fishing line works well.
This "pipe" was made for shallow burial and will remain dry with
simple sealing techniques
Keep a foot or more above ground and you can use the plastic plugs
to water proof the run.
Check out the irrigation section of the local home improvement store
you will get a ton of
Ideas.
A good friend who lives in a "Condo Nazi" controlled sub division
was able to lay in a bunch of redials and a coax runs to tree
mounted stealth Windom when he had his "sprinkler" system overhauled
and they needed to lay in two new "replacement" runs.
While the repairs where in progress he had them quick trench in a
few "radials" that where built using rat shack five conductor rotor
cable ($13/100) that he cut down for five band use and then plsti
dip sealed.

Topic: 3708  Message: 3726

I found that powdered laundry detergent seemed to provide the same
benefits as plug aeration and was easier.

I'd forgotten about aeration - that was definitely a big deal when I
lived in Colorado where there was so much clay in the soil. An
arborist counseled me on that, saying that if the lawn needed
aeration, it was a sign of poor drainage, which is made worse if you
use a mulching mower. So I started hiring a kid to mow and insisted
that he bag and discard the clippings, and the need to aerate went away.

In later years, I followed the advice of a Russian colleague: "Don't
put money into fertilizing and watering and mowing a crop that you can
not eat." Now we just enjoy whatever mother nature provides, cutting
the grass (more accurately described as indigenous weeds) only so that
the neighbors' cats can keep the rodent population in check.

If I were in an area that required aeration in order to maintain the
level of lawn that the neighborhood expected, I'd very definitely
focus on elevated radials!

Thinking of vertical systems, I want to be able to use separate RX/TX
antennas. I know that there's a mod for the TS-850 to allow a
separate RX antenna, but I'm wondering about the wisdom of it. The
annals of contesters include many stories of front-end damage caused
by a TX antenna coupling into an RX antenna, in a radio that may not
completely disable the RX section during TX. I'm thinking that a much
safer method would be to use the PTT line to drive an external relay
that switches between TX and RX antennas. This guarantees that the RX
section in the radio is at least as disconnected as Kenwood makes it,
and also guarantees that the RX antenna is connected to only the open
relay contact.

Anybody in the group have comments and/or experience in the matter?

Hi Dave, you might want to look into the MFJ-1708 RF sensing TR switch. I bought one from R & L Electronics for about $63 plus shipping to use with my Johnson Viking Ranger ll but sold the Johnson before I could use the switch. I figured on using it on my TS850 so I could use a separate receive antenna also. The switch seems to be well built and if memory serves me right it had some good reviews in eHam. You may be able to down load the manual for the switch from MFJ. I was going to use a multi position coax switch connected to the MFJ switch so I could choose different receiving antennas.

Topic: 3708  Message: 3728

My understanding of aeration with a powered plug/core machine is to let air and moisture in the soil and bring up some grass material to fertilize and is understood as one of the better non-chemical procedures to a healthy lawn. Also, up this way we have a product called Milorganite-- fertilizer from the Milwaukee sewer district that does cause lawn and garden growth (and more energy expenditure), but is a natural recycled product.

Sorry to deviate from the core idea here, but how does powdered laundry soap aerate? Is that, uhhmm, for real?

Eric

# 3729. Re: [TS-850_450_690] Re: On-ground radials and separate TX/RX antennas.

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-21 21:07:44 UTC
From: KD5NWA
Topic: 3708  Message: 3729

I find a mole to cause more aeration than you can stand and it's
free, after a while the neighbors cat will get it.

At 03:17 PM 10/21/2005, you wrote:

>My understanding of aeration with a powered plug/core machine is to let
>air and moisture in the soil and bring up some grass material to
>fertilize and is understood as one of the better non-chemical procedures
>to a healthy lawn. Also, up this way we have a product called
>Milorganite-- fertilizer from the Milwaukee sewer district that does
>cause lawn and garden growth (and more energy expenditure), but is a
>natural recycled product.
>
>Sorry to deviate from the core idea here, but how does powdered laundry
>soap aerate? Is that, uhhmm, for real?
>
>Eric
>
>
>
>Dave wrote:
>
> >I found that powdered laundry detergent seemed to provide the same
> >benefits as plug aeration and was easier.
> >
> >I'd forgotten about aeration - that was definitely a big deal when I
> >lived in Colorado where there was so much clay in the soil. An
> >arborist counseled me on that, saying that if the lawn needed
> >aeration, it was a sign of poor drainage, which is made worse if you
> >use a mulching mower. So I started hiring a kid to mow and insisted
> >that he bag and discard the clippings, and the need to aerate went away.
> >
> >In later years, I followed the advice of a Russian colleague: "Don't
> >put money into fertilizing and watering and mowing a crop that you can
> >not eat." Now we just enjoy whatever mother nature provides, cutting
> >the grass (more accurately described as indigenous weeds) only so that
> >the neighbors' cats can keep the rodent population in check.
> >
> >If I were in an area that required aeration in order to maintain the

I fail to see why doing the same thing over and over and getting the
same results every time is insanity: I've almost proved it isn't;
only a few more tests now and I'm sure results will differ this time ...

# 3730. TS-450s problems

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-21 22:58:48 UTC
From: matt smith
Topic: 3730  Message: 3730

Hi All I bought a kenwood ts-450s at a ham fest
"hoss traders" a couple of weeks ago from BRUCE A.
STEVENS, WO1B he said the radio was fine nothing wrong
with it ! I have sent him email and he does not
respond ! beware write down his call and dont buy
anything from him !! the radio has problems.

first was when you turn it on the dipalay was all lit
up and it world do nothing and some times it would
turn on,so i reset it and it still did it,then i put a
new cpu battery in it and it works most of the time
now,but it does not have any tx power ??
how do i fix that problem ?
thanks
matt smith

Have you ever had a 450 before? If not, be sure to follow the
operating instructions, step by step, in putting the rig on the air.
It is just possible that you have overlooked something - like the
output power control. We all do it once in a while, especially with
a new rig.
Did you get a manual with the 450?

no man. with it but have one i got off line,no output power no
matter what you do with the power or car buttons on any mode ie sb
am or fm cw ??

now what ?

Can it be heard on a local receiver, say in FM or CW
mode?

If so, there is a problem in the RF amp chain from the
last mixer on out.

yes i can here it on my scanner on 10m any mode it just does not put
out any power on the display on the radio, or on a watt meter well
it did say like a watt or so but not 100 like its suposed to be
puting out
thanks

You sure you have the carrier or power controls all the way up? Some modes need the carrier on full, some don't. If you are trying CW, you have to have the vox button pushed in or it won't key the rig. 73 and GL

# 3736. RE: [TS-850_450_690] Digest Number 885

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-22 00:04:21 UTC
From: sailfree4me@netscape.net
Topic: 3736  Message: 3736

Guys,

I love this BB but take a look at this digest. What is wrong?

We need some discipline here in trimming off all the legacy emails when responding. I know it is easy to just hit reply, but the lengthy reads are not good email etiquite, IMHO.

Please trim all but the last that you are replying to? I will appreciate it and I'll bet others will also...

I have tryed everything and the radio keys up but does not put out
any power ?
this is in all modes moving all buttons also used a diff mike and
used the send rec button still nothing ???

Suspect drivers are failed.

What is your power supply and what is the voltage that
it is putting out?

I have a astron rs-35m power suply its puting out 13.8 to 14 v when
the radio is keyed up it only draws about 2 amps or less and uses
about 1 amp just to turn the rig on.

I think the power suply if in fine working order.
thank you

HI Matt

Another thing here--if I don't have the "amps" control on my power supply turned all the way up, it won't key. It will show 13 volts on the meter, but without turning the "amps" control all the way up, it doesn't work. Sometimes when I get to messing around where the power supply is, it gets turned down accidently and no output on the transmitter.

Hi Matt

OK. My Astron 35 VS-35M has a control on the front to vary the amperage.

Are you sure that there is an adjustment to vary the amperage???

More likely, it is an adjustment to vary the voltage, which if over done
will cook your rig.

Hi Paul

Well, it says Amps. The other one says Volts.

This is part of the description from the Astron webpage:

? Separate Volt and Amp Meters
? Output Voltage adjustable from 12-15 volts
? Current limit adjustable from 1.5 amp to full load

Then you have adjustable voltage with a current limiting adjustment -
the power supply will limit the amount of current the device can draw -
not the same as adjustable current.

Hi everybody,
I'm looking for some help. I'm looking for a wire dipole for
80 and 160 mtrs ( with traps ) . I don't know if it is posible to make them
with one feeder. Also if someone know from where I can buy please let me
know. I thank you very much for any information and any help is appriciated.

Go here:

http://www.alphadeltacom.com/pg1.htm

... and then look at the DX-LB

---

Also, look here:
http://www.freewebs.com/hypower/webdoc1.html

... and then look at the 2B8016S

Both companies use loading coils that have enough inductance to block
the higher frequencies, so each section is isolated from the lower
frequency sections.
The design is much better than traps, because there is no capacitor to
break down.

I have used antennas from both of these companies and the WORK as they
as stated, and last forever.

The second company also makes a low power version if you only want to
run 150 watts. The coils and wires are smaller.

i suspect popped drivers.

Hard to prove that happened when the rig was still at
the old owner's;

You say it receives OK?

the radio did not turn on when I got it,after replacing the internal
cpu battery it would then turn on and recive.
The radio has never transmitted with more then 5 watts sense I have
owed it !
the guy I bought it off said it was a nice radio and nothing was wrong
with it!!!

I have tryed to get ahold of him but he does not respond.
so I got shafted,oh well.thats life
now how do I fix this.
I was thinking about sending it out to Kenwood but it sounds costly
and I dont know if it is worth it?
mabey I can fix it if it is not to hard of a repair?
thank you to all that have tryed to help

I note that you are in NH. There's an authorized Kenwood service outfit in Hollis, called Beltronics. I have used them on my TS-450, and found them good, and not too expensive. Might be worth taking a drive over with the rig.

Topic: 3754  Message: 3754

I'm having trouble with my 850. I recently acquired a DSP-100, set it up and all was fine. I hadn't used the rig in a few weeks, went up on a 75 meter group and noticed that my audio in the monitor faded in and out. The others in the group said nothing was wrong... and that I wasn't fading.... I disconnected the DSP 100 and still noticed the same thing... any ideas?

Joe,

What do you have the TX filters set at? If you have then in the wide
setting the audio will do that. Change both filters to 2.7 on TX and
see if it stills does it.

Have to look at the switching voltages that control
the audio path from the MON circuit to the speaker
amplifier input.

Paul, the best traps I think are coaxial, homemade jobs; I have used the Unadilla traps but they only last about five years in the sun, get cracks in the plastic and then arc over at anything over about 400 watts. I live at 5330 feet in Colorado, your experience may vary:

http://www.unadilla.com/traps.htm

In the 2003 ARRL radio hand book (big book) there is a project 80/160 single feed line dipole with traps you can make. I would think it is in subsequent ARRL radio handbooks too. In the Antenna section.

# 3759. Another try for CAT problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-23 21:19:31 UTC
From: pa0mir
Topic: 3759  Message: 3759

No replies received; must be a very rare problem then but just trying once more for help

RIG: TS450
CAT: homebrew interface with 7404 and MAX232
tried different computers, all the same problem
In september before leaving for 9H all was fine
Had a working CAT interface, doing everything fine
Now back and putting station together again no frequency readout on the computer anymore.
After my holiday put everything together again but now the RIG does listen to the CAT but does not give any replies to the computer.
The path from the rig to the computer is working, tested when putting a testsignal in by hand.
So give a command, rig listens e.g. QSY or change mode works.
But ask frequency rig does not give out information
Anybody has an idea as to this point? Checked every setting and connection, but found nothing amiss.

Logger32/N1MMlogger/Luxlog/old QW4/SD
All were working fine before but lost the frequency readout on them all now.
Tried both the laptop (Toshiba 4600 under XP) and the Desktop (under win 2K) but I was out of luck on all.
Now trying to find the Kenwood diagram and check the working of this port.

thank you for that info I did not know there was one in nh.

does anyone know if there is a way to test the finals in the radio to see if they are gone or mabey its somthing else like that glass thing pictured on this web site ??
I just wish i could fix it myself other then send it out and pay god knows what to get it done !

thanks
matt

If you don't locate one let me know, got to order a
bunch of these. Same as the 850 screw. They also work
fine on most all other rigs.

From: jim999us
Topic: 3759  Message: 3765

I can't give you exact recommendations where to look for your problem
but can relate my recent experience trying to get my ts-850 to work
with PC Control. But, note the DC Voltage readings below: Would be
interested to hear from you what DC voltages you measure on your
TS-850.

I recently posted to this group question about Rigblaster Pro TTL to
RS-232 interface use.
No replies received.
To answer my own question, I have now learned
from Rigblaster/West Mountain Radio
that their interface built into the "PRO"
will not work with the TS-850. Wrong signal polarity.

Note the DC Voltage readings below:

Having similar problem here with my TS-850.

I've tried the Kenwood IF-232C and other suggested hookups from
sources on the Internet.
I am beginning to think the problem with Remote Control of the rig is
in the ACC-1 port having some kind of problem.
I have never been able to get the Remote port to work.

Using oscilloscope I can't see any signal of any kind coming out of
any pin on the ACC1 Din Connector.
The DC voltages are mostly correct according to the info below. But
no scope signals. I would think there should be some kind of data
coming from the TXD line .....

I have learned from the 850 Service Manual, that one should expect to
find the following DC Voltages on Acc-1 port.

TXD 0.2 (two tenths volt)
RXD 5.0
CTS 5.0
RTS 5.0

On mine, all of the 5 volt readings are correct, but the TXD line is
about .15 ... not much diff, but may indicate a problem, especially
since that's where I would think the data being sent to the computer
comes from.

Would appreciate anything you could tell me about remote operation of
the 850 since I've never seen it work but think the problem is in the
radio rather than the interface or computer here in my case....

What are you using for Interface from PC to the 850 ??

73
Jim

Hi Jim

I recently bought a CAT interface cable from G4ZLP at ZLP electronics in the U.K. and it works like gang busters on my 450SAT. Think the 850 and 450 both use the same interface. He has them for sale on Ebay for around $40 shipped. Got mine in about 7 days. It is plug and play and real easy to set up.

# 3768. RE: [TS-850_450_690] Re: Another try for CAT problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-25 18:13:05 UTC
From: John A. Ross [BT]
Topic: 3759  Message: 3768

Hi

I have just coupled up our local clubs 850 via RS232 and found a small niggle with logger32.

It would also not read frequency. PTT via DTR was OK so it seen the serial port at least

That is until I went into Radio 1 config, toggled RTS high, then off again. Hey it reads the frequency now. Very strange

Our local Logger32 expert reckoned I had the configuration wrong.

The interface does require all 4 lines, I have seen some designs using 2 wires and looping back RTS/CTS but not found them to be stable.
I used a variant of one of the interfaces available on the internet which uses optocouplers for isolation as well as changing the polarity of the active states for the signals.

On my travels for a interface I saw many, I would just like to point out that unisolated interfaces using just transistors and R dividers have little or no ESD protection for the pins on the 450/850, the rigs built in protection on this point is limited. With at least a 232 transceiver in line, you will have minimum 4Kv or 15Kv depending on the 232 transceiver you pick.

John

as far as I know, the if232c(or its clones) is for ALL Kenwood that require
the interface. (I think the 950 is built in....)

and should work the same settings....

# 3771. TS690 vs. TS680

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-26 02:45:33 UTC
From: John Geiger
Topic: 3771  Message: 3771

I recently picked up a TS690 in a trade and have been using it as my main HF and 6 meter rig. Overall, it is a pretty good rig, but the NB is kind of weak when it comes to removing the power line noise that I have. I have heard that the TS680 has an outstanding NB, and I am thinking that it might be a better rig for my QTH. Has anyone been able to compare these 2 rigs, and overall, how did they compare to each other? I realize that the 690 has some extra features like cascaded filters and an internal tuner. I am surprised that the 680 has an adjustable noise blanker while the TS690 doesn't. And I also hear that the 680 has a different NB than the TS140 does, even though they are very similar.

John if you are going to change rigs, get the 850.
With the NB mod, they are fantastic.

The following TS-850_450_690 poll is now closed. Here are the
final results:

POLL QUESTION: If you are in favour of a weekly net for our group, what band would you prefer to hold the net on?

Current propogation and antenna availability will play factors in your decision.

CHOICES AND RESULTS
- 75 meters, 1 votes, 5.56%
- 40 meters, 5 votes, 27.78%
- 20 meters, 10 votes, 55.56%
- 17 meters, 2 votes, 11.11%
- 15 meters, 0 votes, 0.00%

I just sold my TS-690 and bought a TS-850 about a month ago. I am planning on using a transverter from Elecraft for 6 meters. The research I have done so far indicates that the Elecraft 6 meter transverter is the best one currently being offered. I have emailed Elecraft about getting a crystal for the transverter that will allow me to start at 26MHz instead of the standard 28MHz. This will allow me to operate on the full 6 meter band. The TS-850 is designed to allow for the use of a 6 meter transverter and will display the correct frequency when properly set up. I am waiting to hear back from Elecraft on the 26MHz crystal now.

# 3779. For Sale SSB Filter

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-28 01:07:41 UTC
From: n7ioh
Topic: 3779  Message: 3779

I have for sale the Kenwood YK-88S-1, 2.4 kHz SSB filter for the 8.83 IF. The filter is like new and comes with the directions. I was told that Kenwood is not making these any more and INRAD does not make a 2.4kHz for the 8.83 IF. This filter fits a multitude of different Kenwood radios. The price is $90, this includes shipping in the continental US and Canada.

Thanks, Al, n7ioh

# 3780. TS-940S value

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-28 17:01:22 UTC
From: Dave
Topic: 3780  Message: 3780

Locally, there's a TS-940S available with no filters. I'm contemplating recommending it to a ham whose TS-930S was declared "not economically repairable". Asking price is $700, and it's been checked out by a tech who works for a calibration lab, and has a reputation for exacting work.

1) Is $700 a reasonable price for a TS-940S that's probably a good example of the breed?
2) Can the TS-930S filters be transferred into the TS-940S?

TIA,

73,

Dave W8NF

That is about an average price for a TS940 in good condition with no extra filters. And yes, the filters from the 930 will work in the 940. 73s John NE0P ---------- Original Message ---------- From: "Dave" Reply-To: TS-850_450_690@yahoogroups.com Date: Fri, 28 Oct 2005 17:01:22 -0000 > > > > >Locally, there's a TS-940S available with no filters. Yes the filters will swap, I believe

Why not suggest a TS-850? Much lower failure rate and
comparable performance to the 940.

Topic: 3780  Message: 3784

I have similar questions. The guys I know with 940s call them "the only radio I never had to repair", whereas I've never known a TS-850 that did not at least have C1 on the CAR board go blooey, leak and cause other failures. I admit I'm unfamiliar with the TS-940. I cannot, in good conscience, recommend a TS-850 to a dedicated CW op unless they first spend time with it and determine that they can tolerate the inconsistent QSK and aggressive AGC, and are willing to spend a bucket of cash on INRAD filters, unless they can tolerate the blowby of the Kenwood filters. The reason I picked the '850 was the great performance of the front end, and to date, it has never disappointed me on that parameter. As I said, I'm not familiar with the 940, so maybe it has just as long a list of "needed mods" and "this doesn't work quite the way you expected" as the 850? Dave W8NF --- In TS-850_450_690@yahoogroups.com, "John Geiger (NE0P)" wrote: > > > What were the failure problems in the TS940? Final amp and power supply problems among others. Considering you can buy a used 850 for around the same price it should be a no brainer. Although I have always thought a 940 would be a nice addition to the shack.

This discussion got me to looking at the ARRL review of the TS-940. I think I would prefer it over the 850. It would depend on whether the 940's AGC is as poor as the 850's. But the '940 has an outboard RX antenna jack, more intelligent band-select switching, a "return to zero" function for the RIT/XIT, and 15dB cleaner transmit IMD. The built-in power supply of the '940, I would see as a drawback, as I do go operating portable on occasion. The 850's transmit IMD is always a concern for those of us who use big antennas and amplifiers. In my case, it's less of a concern because I so rarely use SSB.

The '850s built-in keyer is OK for casual ops, but doesn't give you enough adjustability of paddle/keyer timing characteristics if you're really trying to optimize your speed. I use an external CMOS4 and BY-1 paddle.

Interesting comparison.

Me neither Joe,

But gets me wondering if that is what has caused my TX monitor to act funny. My monitor sounds like listening to an SSB signal on AM! All I hear is the modulation as if the carrier signal is not present. If C1 is on the carrier board and has leaked maybe that is what has caused the 8.83 mhz carrier signal to disappear.

The 930 suffered from poor solder joints and unreliable power supplies. But when they were working, they sounded and performed great. If I was to build a Kenwood collector shack I would want a 930, a 940 and an 870 around my 850. That would be sweet.

Sri - I take it back. I was told by the dealer when I bought a 940 that
it wouldn't take the older filters, so I bought brand new ones.
I just checked and they will work.

Topic: 3780  Message: 3795

The reason my friend is in the market for a radio is because his 930 suffered a main controller board failure. Repair consists of $300 for an aftermarket replacement board, and $200 installation. Kenwood's own diagnosis is "irreparable".

Poor solder joints seem to be a Kenwood tradition. Many "common problems" on the 930 and 940 were blamed on poor soldering, and when I had to fix my own TS-850, I was stunned at the globs of solder rolling around, poor flux wetting and cold joints. Even when I was a kid I soldered better than that.

The '850 obviously has a lot going for it. In terms of RF performance and ruggedness, there is no more demanding community than the contesters and DXpeditioners. As of the last time anybody ran a poll, it took second place, behind the FT-1000 series, as the "best contest and DX radio made".

# 3796. DSP-100

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-28 22:24:00 UTC
From: tsmithers@cix.co.uk
Topic: 1072  Message: 3796

A few months ago I acquired a DSP100 and have only just go around to setting it up with my 850.

The first thing I noticed was it appears to run quite hot - is this normal or a symptom of impending doom. I say this because the unit appears to occasionally drop out of receive.

Looking around the web I found one site, http://www.w3oz.netfirms.com/newqanda3.htm that mentioned the problem with the RCA/Phono sockets breaking away from the PCB. I've re-soldered these but it still seems quite hot and I'm still getting the drop out.

I'm now thinking about taking two cables straight into the unit and making a permanent fixing and bypassing the RCA sockets altogether, however before I do this I wondered if I'm likely to be on the right track or is there something else I should look at first.

Any advice appreciated.

Regards to all
Trevor G0KTN

Same issues as the 940 except the AVR unit is harder
to get out.

And the "main unit" takes about an hour to free up for
service because it's so large.

But other than that, a great rig.

Tony, C1 on the CAR board is one of the caps that Kenwood says can go leaky. They used tantalum capacitors in a lot of spots. Tantalums are notorious leakers, and really ought not be used, unless the product absolutely demands the low ESR of a tantalum. I replaced my C1 with an electrolytic - after grinding out the charred board underneath and filling the hold with new epoxy.

Hi Dave:
thanks for the info . i think steve was talking about those caps. i have the notes at work. but recall they were on two different boards and all were 16volt caps
i am getting ready to order replacement caps for all 3 of my 859sat's.
i will make sure C1 is included.

Been to two county fairs and a goat ropin', never seen
nuthin like that on the 850, Dave. All the ones I have
worked on, if anything was rolling around loose in the
rig it's because lightning vaporized it and let the
pieces out.

If there are three term regulators in this thing, go
ahead and change them; sometimes these fail in a way
that causes them to run hot yet not loose regulation.

Have seen it several times with the 7805 series of
regulator and once on the 78M08 mini reg.

Not having owned one (so this is hearsay), but I have heard that running
hot is a characteristic of the DSP-100.
It is often made worse by users putting the 850 on top of the DSP-100,
instead of the other way around,
but under the best case, they are reported to run hot.

# 3808. For Sale SM-220

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-30 11:35:27 UTC
From: smokey1310465
Topic: 3808  Message: 3808

Just got an SM-230 for my TS-850, so I am selling my SM-220. It is in good condition with a real clean display. No Pan Adaptor. Comes with original manual. I will take the best reasonable offer. Joe, WA2PJI. Please email me at rsalvo@...

# 3809. Nice surprise this weekend

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-10-31 01:27:58 UTC
From: John Geiger
Topic: 3809  Message: 3809

I picked up a Kenwood TS690 last weekend in a trade, and had it going for a little while in the CQWW contest this weekend. Didn't really know what to expect out of the radio, but was pleasantly surprised at how good its receiver is. The front end help up well under contest conditions, and so far it has been a nice rig to play with. ALso get great audio reports with it.

Anyone else also surprised at how good this rig turned out to be? Now I just have to find the Narrow SSB filter for it. That would have helped at times this weekend.

73s John NE0P

Topic: 3780  Message: 3810

Bill, some of the photos you've posted from inside the 850 have cold solder joints. I was pretty much assuming those bad joints were from the factory, not ones you did ;) But they do look better than my particular 850. To be honest, the only really ugly soldering on mine is the PA section - looks badly done with a soldering iron. The other boards just look badly done with a wave soldering machine!

As I said, Dave, I have not seen such things yet; you may have a rig that was not done right, or we have different opinions as to what looks bad for solder jobs! hi...

Excellent suggestion Bill, thank you. There is at least one 7805 in the unit so I'll have a closer look at this when I open the case up again. Strangely, the unit appears to be behaving itself at the moment.

Thanks for that Paul - at least it confirms my findings. Looking back through the archive I see some users have talked about using a small fan to keep it under control.

>It is often made worse by users putting the 850 on top of the DSP-100
Hmmm, that's just asking for trouble.

I have for sale a Buxcomm Rascal soundcard interface, wired for 13pin Kenwood radios like the TS2000/570/870/450/690. Works fine, I am asking $30 + $3 shipping. Only selling because I am changing to another radio for HF.

I have had a change in plans radiowise, so have several Kenwood filters for sale. They fit the 450/690/850/570 series, and I am asking $70 each plus a little for shipping. Here is what I have:

1. YK-88C-1 500hz CW for 8.83 IF
2. YK-88SN-1 1.8khz SSB for 8.83 IF
3. YK-455C-1 500hz CW for 455khz IF.

Hi John, I just sold my TS-690S about 6 weeks ago. I bought it new and liked it quite well. I had added both 2.1 IF filters from INRAD and the 2.1 filters didn't seem to make a lot of difference from the 2.4 filters. If you are going to use the radio for contesting in SSB I would suggest using the 1.8 IF filters from INRAD. I only used the radio for rag chewing. Something I have added and now use all the time is a Clearspeech speaker. I have two of the old ones before Heil bought them out and improved them and then raised the price. I have found stations that I just can't copy until I turn on the Clearspeech. I am sure there are other good audio DSP units but I have not used them. If you can barrow one to test I think you will buy one. Welcome to the group and enjoy your new toy.

Al, n7ioh

John Geiger wrote:

>I picked up a Kenwood TS690 last weekend in a trade, and had it going for a little while in the CQWW contest this weekend. Didn't really know what to expect out of the radio, but was pleasantly surprised at how good its receiver is. The front end help up well under contest conditions, and so far it has been a nice rig to play with. ALso get great audio reports with it.
>
>Anyone else also surprised at how good this rig turned out to be? Now I just have to find the Narrow SSB filter for it. That would have helped at times this weekend.

Hi John,

Name here is Frank. Would like to know if the Rascal will work with the TS-850S, if so is it still available for sale? If it is please let me know the method of payment. I'm in Germany but will pay additional postage. Thank you in advance.

Best 73, Frank
WI2R/DL1RW

# 3818. Audio DSP Program...in case you haven't seen this one

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-11-02 12:20:28 UTC
From: max_ve3tmt
Topic: 3818  Message: 3818

Hey guys,

I have been tinkering with this audio DSP program for a little while on my 850 and it is very helpful at times. It's free too! Be careful with some of the parameters you set as using the wrong value will crash the program. It has helped me make many contacts under noisy conditions. Read the instructions because you have to set your mic input on the soundcard on mute or you will bypass the filter. (trust me I speak from experience here!)

If you try it out, let me know what you think.

Max

PS It's in the files section.

Three term regulators can go into oscillation from
time to time; they are basically high-gain, power op
amps, hi!

Good luck, keep us posted.

Oscillation is a decopling problem with these voltage regulators.
2 small 10nF caps (or similar range) on the in and output will do the
job. Quite often these caps are left out ...
A good scope on the output will show you the noise.

Hi to all,

Using my TS-690 mostly for SSB usage, more and more I am using CW
again.
My question is: Can I connect a Kent paddle to my TS-690? Has this rig
a keyer inside?

Looking forward to the answers,

With kind regards,

Kees - pa7two - m5two.

A too-large value on the output of a three term
regulator will also send it packin', strange but true!

# 3826. Something to watch for.....

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-11-04 11:53:47 UTC
From: max_ve3tmt
Topic: 3826  Message: 3826

After aquiring my current 850, which was quite a long time ago I performed the antenna tuner mod as I did on all my previous ones. One thing that struck me odd after moving into the new QTH and putting up the new antenna is that the tuner would take forever to find a match and when it did it would not stop tuning. It would bypass the dip and keep going. What I found really wierd is that is could not even tune my R7 in the 40m band, even though without the tuner it is resonant around 7.070. Last night I brought some good industrial lubricant home to do the tuner gears and anything else that needed it. Just on a whim I decided to reverse the two coax cables going into and coming from the tuner board. Voila! it now works the way I remember, finding a match usually in less than one second and the tuner quits when it finds the match. So if you plan on doing the tuner mod, make sure you test the tuner before putting the lid back on. I wish I had checked this long ago, it would have saved a lot of frustration!

What is the tuner mod??

I have my 850 on the bench an plan to do the MARS mod, the BC band mod, new lithium battery and a few other things and if this is worth doing, I would like to do it while everything is apart.

I believe the mod he refers to enables the tuner on receive as well as transmit. I'm not sure if it's in the group files but I know it's at www.mods.dk.

The other two mods are easy to do and great, also. Why Kenwood puts those BC band filters in their rigs is beyond me but it is a hot rcvr on the AM BC band after the simple mod.

Consider doing the noise blanker mod too while you have it open.

It's to route the receive path thru the tuner to
increase sensitivity when using the tuner.

I don't recommend it because the tuner is a bit noisy
on 10-15 meters, and puts birdies all over the bands
when you do the mod. At least mine did.

I undid it tout-suite.

No, mine (a late version 690SAT does not do that. Check to be sure the unit
has a good ground as the shield may be supplying the return path for the
negative DC. (blown fuse in the negative line??)

# 3833. Tuner Mod

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-11-04 17:05:57 UTC
From: max_ve3tmt
Topic: 3826  Message: 3833

Paul,

The mod I am referring to involves rerouting the tuner so it works in receive as well as transmit. It is very easy to do and worthwhile in my case. I notice a 2-3 S unit increase in receive after the mod. I did a writeup in the files section way back. The pictures arent that great...cheap camera I had at the time.

Max

I was going to suggest exactly the same thing Tom. Sounds like he is
using the ground of the coax as his negative return.

It had me scratching my head Bill. Seemed odd it wouldn't match the R7 on the upper end of 40m yet it would tune my longwire on 160! Of course I had to use the tuner in manual mode. Now it's behaving..hit the tune button and presto...matched.

I have noticed the tuning using the memory channel is getting a bit erratic. I set it for 5 khz steps for tuning through the shortwave bands but at times it goes up instead of down or doesn't change the frequency with each "click". Can this be cleaned or its it something else?

Check your negative lead fuse.

then remove it and connect the two wires together!

I can't stand those darn things.

Can you get in there and squirt the encoder?

If not, a new one is going to be needed.

My slop tuning control is getting intermittant.

I suspect that this control is a mechanical encoder - in which case another group member suggested "shooting" it with cleaner. I concur with this suggestion.

If the problem persists, you should replace the control. These are generally good for a limited amount of use - compared to the optical based main tuning control.

Before you ask, conversion of the mechanical encoder to a optical version is not practical. These are generally larger (thus won't fit the existing space of the smaller mechanical type), cost a bunch more typically and would probably require some additional interface circuitry.

In a design I am working on, low cost mechanical encoders found from various sources on the net - but I would try to use the original Kenwood OEM version. This will assure no kluge modifications and the shaft will be properly sized to fit the Kenwood original knob.

Best regards,
David Clark, ai2a

Max,
I had a similar problem in my TS-850.At the suggestion of Bill, K0ZL,
I put a small squirt or two of "Cailube MCL", down the shaft.It seems
to have cleared the problem.I did this earlier in the summer and the
problem has not returned.I had to get the Cailube from the
manufacturer, over the web.No one in Albuquerque had it, or had even
heard of it.It seems to be a product made for the music business, to
lube conductive plastics, pots, etc.It's expensive, but a lot less
than a new Mem Ch/Vfo Ch control.

I had never heard of this product before, so I Googled it. Came up with:

http://store.caig.com/s.nl/sc.2/category.293/.f

They have several sizes, the small can is $7.95. I think I will try it out. Maybe it can do something for the dirty pot in my Millen 90651 grid dipper I bought at a hamfest last summer.

They have a lot of other neat products listed on their webpage.

There is no improvement when the antenna is already matched to the rig without the tuner. It shows up most when the SWR to the antenna without the tuner is high.

Well not much difference with the vertical because it is pretty
resonant, but in the case of my dipole it makes a very noticeable
difference between in and out.

Max

The mismatch has to be pretty bad if you can notice it on receive. Do
a google search for "mismatch loss". If you include typical feeder
loss for RG-8 on ten meters, you get losses like this:

SWR 1:1 - 0db loss
SWR 2:1 - 0.6dB loss
SWR 3:1 - 1.25dB loss
SWR 4:1 - 1.8 dB loss
SWR 5:1 - 2.5dB loss

Two "S" units would be 10-12 dB loss. The TS-850 tuner isn't intended
to match things that are that bad, although it will merrily try to do so.

Bear in mind also, that with the very high sensitivity of the TS-850,
you can have a lot of attenuation in the receive path and not be
impaired. For instance, if you add 8dB loss in the feeder, then you
have not only a weaker received signal but also weaker received noise,
and intelligibility is not affected at all.

I thought for a while about doing the tuner mod, but realized that if
my antenna match was so poor that it was affecting received signals,
then I really ought to do something about the antenna.

Dave,

I agree 100% and most of the time I am using a fairly resonant antenna. However being the nitpicker I am I chose to do the mod. For example, my R7 is tuned for the low end of 40m where most of the Canadian phone nets and PSK activity is. If I QSY up around 7.250 you can hear the noise and/or signal levels drop off considerably. With the tuner in the stock position, it will match the antenna fine but the receive side is still down a few s-units. With the tuner mod you can actually hear the signals pick up as it goes to its preset setting. Kind of like using an external tuner that helps both the receive and transmit. I have noticed no ill effects after doing the mod either.

Ali, inside the radio is a system of switched 8V lines
that turn the receive and transmit circuits turn on
and off. You will need to locate these and measure
them.

The easiest place to find them is on the IF unit,
which is on the right as the rig faces you upside down
(the rig is upside down, not you!).

There will be some very small test pads on the board,
labeled TX8 and RX8, or T8 and R8 or something like
that. Just make sure that they are switching cleanly
between receive and transmit.

Hi Max...

I'm curious.

From what you wrote, it sounds like tuner worked at the old QTH With
the mod on the R7, but not at the new QTH. What changed..
Or was it working at the old QTH without the mod, and you moved and did
the mod and it didn't work right?

And does the mod require the cables to be switched, or did you switch
them in the first place when doing the mod, and then have to switch them
back where they were when you found it not working right?

# 3858. Re: Tuner mod now working

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-11-05 15:10:34 UTC
From: max_ve3tmt
Topic: 3826  Message: 3858

Paul,

The mod was done the rig before I moved here, but the R7 was not up at the old QTH. This is its first home. From what I recall doing the other three, I can't remember which order the cables went backand I don't think it should make much difference. I thought I would just switch them to se if would make any change. I did also notice one of the crimps was kind of flimsy and I recrimped it. This may have been part of the problem also. The one thing I always remembered about the 850's tuner was how fast it was, and this one had me thinking something wasn't right. Glad I investigated as it is working sweet now!

Max

P.S. For those contemplating the mod, you will need a short length of mini-coax to do it about 6" inches. You can buy it from East Coast Transistor or use a cable from the rig that you don't plan on using. This is what I did but now I find myself scouring the net looking for them. The mod takes about 1 hour at a casual pace and the tuner doesn't have to be removed. You do have to remove the board at the rear that the antenna relay is on however.

Bill K0ZL might be able to explain what they are for, but they are not diodes, they are capacitors C618 and C619.

They are definately caps Paul, and I noticed a huge increase in noise reduction (electrical noise) after doing the mod.

Ken,

First thing I would do is unplug ribbon cable # 2 on the IF board. This cable carrys the 8V switching voltages for the AGC switch. These will get dusty after a while. If still no go you can trace the switching lines from the AGC switch to the AGC timing circuits. Let me know if you need help.

See that you have -6 volts on pin 1 of Z10, the AGC module on the IF unit. See also that pins 5, 12 and 13 change state as you rotate the AGC switch; these are the control pins for the 4066 which select the different time constant caps for the AGC line.

If this is a feedline loss table, it will not be applicable to this subject. The feedline loss will still be present as we are only matching the 850 to the antenna system to allow full transfer of power. We do not have a table indicating how much loss there is at the antenna input of an 850 due to deviation from 50 ohms. Depends on how broadband the receive input circuit is, I would think.

Good point Paul

The loses of 100 feet of RG058 v. RG-213 or 9913 should have no part of
these figures.
And what is "typical" feeder - RG-58 or RG-213/RG-8U or 9913 ?

About half of my lines are 9913 and the rest are 213 or 8U.

It's a pure mismatch loss table. Has nothing to do with the feedline.

When you have a reflection, a percentage of the power does not get
past the reflection. The amount by which the signal is reduced is
"mismatch loss".

The math looks a bit tedious, but it's not really that bad.

The fundamental measurement unit for matching is "reflection
coefficient", designated by rho. A perfect match has a rho of zero -
zero reflection. A complete reflection is a rho of 1. Modern day
reflectometers and SWR meters are actually measuring rho but have
meter displays and/or cpus to convert to SWR.

Mismatch loss = 10*log (1 - rho^2)

To get rho from SWR:

rho = (SWR-1)/(SWR+1)

The only assumption being made here is that you're not using a tuner
or anything else to compensate for the mismatch.

You can use those equations to demonstrate, for instance, that the
mismatch at one end, caused by using 75 ohm coax on a 50 ohm antenna
(SWR=1.5:1) represents about 0.17dB loss.

Studying the Smith Chart and how it is derived gets you very familiar
with all this math. See, for instance:

http://www.web-ee.com/primers/files/SmithCharts/smith_charts.htm

I used to worry about loss on receive - but that was in the days when
I was using tube type gear that was always marginal on sensitivity.
I've never found a need to worry about RX loss with the over-achieving
front-end of the 850. Kenwood has relieved us of this burden!

Hi Dave,

I think we are talking apples and oranges here. I see that three separate subjects have been discussed:

1. Antenna tuner improving receive signal level: This obviously has nothing to do with transmission line loss or antenna return loss. Those values are not changed by an antenna tuner. What is effected, however, is the RLC mismatch at the receiver's input. Most modern transcievers tend to lose some sensitivty if they done have a good 50 ohm load on their input. That usually is of no concern because antenna noise drops the same percentage as desired signals and the antenna noise is still above the reciever's noise floor.

2. Antenna return loss: When the antenna impedance does not match the impedance of the feedline, some percentage of the transmitted power is reflected back towards the transmitter. This produces standing waves and impacts the impedance presented to the transmitter. If lossles transmission line is used, there would be no actual RF power lost but the transmitter might not be able to produce full output due to the mismatch at the feed end of the feedline. If a lossless matching network is used to correct the impedance to something the transmitter likes, full output will be radiated by the antenna.

3. Mismatched feedline loss: In the real world, with lossy transmission lines and matching networks, the standing waves produce a secondary loss factor in addition to the basic matched loss. This effect is caused by the voltage and current peaks that occur with standing waves. At the voltage peaks, dielectric losses increase. At the current peaks, resistance losses increase.

The modification to the 850 antenna tuner to keep it in line in recieve obviously causes effect #1 above seen in the original question. However, there is an entirely different reason why this modification was developed. The modification also increases the selectivity ahead of the reciever, especially for strong signals below the operating frequency. Some operators have trouble with strong AM broadcast stations producing harmonics and spurs due to simple front end overload. This is sometimes noticable in the 850 on 80 meters when the AIP is on. The AIP removes the preamp and its RF matching components from the receive path. The third harmonic of nearby AM stations often becomes louder with the AIP off. Keeping the antenna tuner in line on recieve improves out of band signal overload performance.

That all make sense?

OK, what threw me was the mentioning of the cable.

Yes you can use one. I just had one installed in a 690. I think the YK is a mechanical filter, whereas the YG is a crystal filter. 73s John NE0P ---------- Original Message ---------- From: "branko_9a3st" Reply-To: TS-850_450_690@yahoogroups.com Date: Mon, 07 Nov 2005 15:53:24 -0000 > > > > >Is possible to use YK-455C-1 filter with TS-690?

Fascinating. I had not realized that there was a front-end overload
problem on the '850. I had always considered the front end to be the
rig's strong suit. I confess that I've not delved into the actual
circuitry in the front end yet, so I did not realize that the
front-end preamp was narrowband. I thought there were two broadband
amps, one for 21MHz and above, the other below 21MHz (or some other
break frequency). I was also under the impression that Kenwood used

some fairly decent bandpass filters on the front.

In my present situation, my vertical is line of sight to a mountain top with three 50kW AM stations, one 25kW, several 5kW, and a bunch of FM and TV stuff. It's about four miles away. In my case, 80 meters is clean with AIP enabled, but I can hear harmonics of the broadcast transmitters when I disable AIP (turn on the preamp). So, in my case, harmonics are created in the preamp, not in the mixer.

Similarly, on Field Day, when we had two 850s and an IC-706, we found that the 850s were clean with AIP enabled, but with the preamps turned on, we heard IMD products from the other two stations. Not to mention the broadband noise that the IC-706 generated any time it transmitted on any band.

In my previous QTH, I had once an unusual problem where I had an S9+40dB spur on the low end of 80 meters, on one antenna only. I could turn AIP on and off, and switch the attenuators in and out, and the spur simply moved up and down in amplitude when I did so, linearly with attenuation/gain. On any other antenna, the spur was completely absent. The spur did not show up on my crusty IC-735. That situation was noticed once only. I never will feel that I figured out the cause!

Hi all

Today, my faithfull TS-850 SAT, that I bought new in 1992, has given me the dreaded PLL unlock problem. Only decimal dots appear in the frequency display.
I know this is a common problem in the TS-440, and I went to DKMODS, to see if there was a repair for the TS-850, but no mention of it. I went into the files section of this group, and couldnt see it also, then went to the Kenwood web site, and looked up their bulletins - only repair info for pll unlock problems to the TS-440.

Yes, if I lived in the USA, I would not hesitate to send it to Bill in Colorado, for his excellent service......but I live in Africa.

Does anyone know what components to check out ?
For the TS-440, apparantly the diodes in the bandpass filter section go bad. I dont know about the '850.

Regardless for this problem, I still think the '850 is the best darn HF radio out there. I prefer to use it, rather than my new FT-1000MK V field, and my TS-2000, and my IC-746. The '850 is one GREAT rig.

Topic: 3886  Message: 3886

To follow on from my previous post about my TS-850 SAT that had the dreaded
PLL unlock problems, I am happy to report that I have fixed the problem.
This message might be a bit premature, as I haven't given the radio a
thorough testing.
For other interested owners that might incur the same problems, here
is the very simple fix I did.

Lift the access hatch on the top cover of the radio, the board directly below
it (carrier unit) is apparantly the one that gives all the problems, especially
the 4 dds chips. All I did was to remove all the cables from the board, and
reseat them snugly down in position. I switched the radio back on and
all the dots on the display had dissapeared, and the frequency was back
up. I tuned the band, and the received signals were once again clear and crisp -
not all raspy like before (when the pll unlock problem occured, ssb signals
would sound like i was listening to them using AM)

I then had a QSO with a YL, Jane, ZR6JEB on 40 meters, and she reported
that my signal was fine.

Just a quick fix for others that might have this problem with their TS-850

Hi all,

I use a power supply Ps-430 for my ts-850sat but sh'es tired, I'd like to change it.

But which one must I choose ? Ps-52 or Ps-33 ? I think they're any good dimension for ts-850s's line ?
What is the different beetween this 2 models ? Maybe one has more good protection against survoltage ?

I see on ebay a ps-52 but 16 Ampères output ??? It's strange, I have the photo of the sticker on front back of the power-supply if you want to see ?

Many thanks for your help

16 amps is way too light - there are two PS-52, and a PS 30 on eBay that would do very well.

The power supply doesn't have to "look" like the radio - they should go under the desk so they don't wast space - that's why they come with long cords ;)

From: Zack Widup
Topic: 3890  Message: 3898

I have been using my PS-50 which I got with my TS-440S on the TS-850. It doesn't match the radio but does just fine as the power supply.

Topic: 3890  Message: 3899

The PS52 is the recommended supply for the 850 but any supply capable of 20 amps or more will do. I owned a PS52 at one point, and now use a homebrew 25 amp supply and it works just as good. Doesn't look as pretty, but as the other respondent said, I have it stuck under the desk out of sight so it doesn't take up valuable real estate on the desk.

Topic: 3901  Message: 3901

Hi,
i have a serious problem on my TS-850Sat I have a distorted audio on rx but also a bad transmitted modulation, the modulatin is fine by the audio monitor. I tested with all filters buttons and AGC correctly selectionned and with interface disconnected from ACC2. Test with the original microphone.
Is anybody have an idea about my problem?
Tnx in advance for answer.

The -1 means the filter is mounted on the little board for plug in rather
than solder in as the non- -1 filters are. However, the little plug in board
is said to be available to mount the non -1 filters on though I have not
found them.

Hi Paul,
How are you doing?
Maybe you need to set the stopbits to 2 (8-N-2) which is the regular Kenwood setting.
Let me know if this works out.

# 3910. Re: [TS-850_450_690] Re: Another try for CAT problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-11-11 22:59:36 UTC
From: pa0mir
Topic: 3759  Message: 3910

Yes, the problem is in this department.
I checked the signal level coming out of pin 2 (TXD)
Looking with the scope I can see a nice pulse-train coming from the port, in reply to the FA; request.
However, this signal swings from 1.24 V up to 5 V and the 1.24 V is already seen as a high signal so the swings are not passed on by the 7404 invertor and the output of the 7404 is always low.
So now the question is: how to drop that 1.24 V down to a signal that will be seen as low.
(shorting to ground effectively works, bur of course does not pass the signal, hi)
I even tried some other inverter of the 7404 (there are still 4 spares)
So now my question:
is the 7404 out of its specifications or is the port signal too high?

Who can help?

Subject: [TS-850_450_690] Re: Another try for CAT problem

I can't give you exact recommendations where to look for your problem
but can relate my recent experience trying to get my ts-850 to work
with PC Control. But, note the DC Voltage readings below: Would be
interested to hear from you what DC voltages you measure on your
TS-850.

I recently posted to this group question about Rigblaster Pro TTL to
RS-232 interface use.
No replies received.
To answer my own question, I have now learned
from Rigblaster/West Mountain Radio
that their interface built into the "PRO"
will not work with the TS-850. Wrong signal polarity.

Note the DC Voltage readings below:

Having similar problem here with my TS-850.

I've tried the Kenwood IF-232C and other suggested hookups from
sources on the Internet.
I am beginning to think the problem with Remote Control of the rig is
in the ACC-1 port having some kind of problem.
I have never been able to get the Remote port to work.

Using oscilloscope I can't see any signal of any kind coming out of
any pin on the ACC1 Din Connector.
The DC voltages are mostly correct according to the info below. But
no scope signals. I would think there should be some kind of data
coming from the TXD line .....

I have learned from the 850 Service Manual, that one should expect to
find the following DC Voltages on Acc-1 port.

TXD 0.2 (two tenths volt)
RXD 5.0
CTS 5.0
RTS 5.0

On mine, all of the 5 volt readings are correct, but the TXD line is
about .15 ... not much diff, but may indicate a problem, especially
since that's where I would think the data being sent to the computer
comes from.

Would appreciate anything you could tell me about remote operation of
the 850 since I've never seen it work but think the problem is in the
radio rather than the interface or computer here in my case....

What are you using for Interface from PC to the 850 ??

73
Jim

# 3912. TS-450 RF Gain delay problem - solved !

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-11-12 06:11:25 UTC
From: Dennis, Philippines low budget dxer
Topic: 3912  Message: 3912

Nov. 12, 2005

Hi all !

Last August I posted this problem :

Everytime I switched on this radio, the RF Gain control acts like as if it is turned to maximum clockwise position and the S-meter would actually be pig at the maximum "red" (even though the actual RF Gain control know is at the maximum counterclokwise position)reading. After about 10 minutes it would normalized and the S-meter would slowly drop back to its actual level and I can now hear/receive audio.

Bill suggested changing capacitors somewhere in the IF or RF Board. I did so and still the problem persisted.

A month ago, I decided to work on the Carrier Unit by changina ALL 7 electrolytic capacitors with 50 volts type. Somehow the problem went away. To be sure I did not use the radio for a full month. 2 days ago I switched it back on and voila! I now have instant receive audio!

So if some of you are having this problem, change ALL 7 of this electrolytic capacitors (all are 47uf 10v) with 50 volts type for added reliability.

I'm not really sure which of the 7 capacitors is the culprit. Maybe Bill or someone else can point which one.

Regards,

Dennis LS. M. Cruz DV7-BJY
the Philippines

# 3915. INRAD vs Kenwood

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-11-13 18:13:21 UTC
From: John Geiger
Topic: 3915  Message: 3915

Does anyone have experience with comparing the Inrad filters to the Kenwood filters for CW in the 2nd IF (8.83mhz). I see that they do have a 400hz CW filter at a pretty good price. Does it do better than the YK-88C-1? This would be in a TS690

John, I've traded out Kenwood CW filters for InRad in a 940 years ago and then my 850. Besides being a bit tighter, they have a better shape factor. I thought they were well worth
the investment.

# 3919. Looking for INRAD filters

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-11-14 03:04:33 UTC
From: John Geiger
Topic: 3919  Message: 3919

I am looking for the following INRAD filters for a Kenwood TS690, if anyone has them available. These are also used in the TS450/850/940/950 series, as well as the TS570. I need:

#103 400hz 8.83IF
#104 400hz 455IF
#95 1.8KHZ 8.83 IF

I can pay with MO or paypal if you have one or more available. Might consider the Kenwood filters for the right price.

73s John NE0P

From: pa7two
Topic: 3920  Message: 3920

Hi to all Kenwood users,

I have a small issue that I cannot find in the user manual.
The 'delay time' for CW is a bit short (read > my CW is too slow...) so
the TRX goes back to RX too fast.
How can I adjust the delay time for TX in CW mode?

Looking forward to your replies,

Kind regards and 73, de Kees - pa7two

VOX delay setting is on the back panel. No separate adjustment for CW
and SSB. You have to pick your favorite mode and compromise the other.

Make sure that the "full" button on the front panel is not pressed.
If you press "full", then you it runs as fast as it can.

73,

Dave W8NF

I fired up my 850 tonite and got a cw error message "UL" - I don't know what it means - but my
display kept going blank - after about 3 minutes of checking all the knobs it is working normally? Anyone know what this error message means? It's working fine now - I will have to monitor the situation.

Thanks and 73,

Bill N4ZI

Sounds like the Phase Locked Loop has unlocked Bill. That's what the "UL" stands for and the dots on the display is a tell tale symptom. You should find some answers here from guys who have been through it.

Max

From: Zack Widup
Topic: 3924  Message: 3926

It means "Unlock" and is the result of the PLL becoming unlocked.

Go to the group web page and see the recent posting about this and the
fix, which involved unplugging and replugging in some of the connectors on
the board(s).

This looks like the beginning of the DC-DC converter problem that we all know and love.

My webpage has a couple ways to fix this problem but I think that it maybe easier to fix the board in place. What needs to be done is:
"I changed resistor R2 and R3 (on the dc-dc pcb) from 22k to 18k and checked again. What I found now was that the dc-dc convertor worked fine from 12.5v down to 9.5v. Back at home I then put the PCB back into the TS850 and now have again a rig that is working fine, ALC and output are stable now." You don't need the chip resistors, just try to get the smallest ones you can.

Bill K0ZL has a nice picture of which resistors to change on this group site. Look under File > Modifications and then DC-DC converter. That would now be my first thing I would try.

Joe,

Thanks for the hint (my 850 also has this problem from time to time).
A question for you: those surface mount resistors look like fiddly
things to unsolder, especially with my aging eyesight. I note that
the net resistance of 100K and 22K in parallel is 18K. I am wondering
whether it wouldn't work just as well to leave the existing 22K
resistors where they are and just add a 100K 1/8w wire lead resistor
in parallel with each (i.e. cut the wire leads short and tack-solder
them directly to the existing solder joints). Is there any reason why
this wouldn't work?

That's what I did, only I used 31K instead of 100K. The modification page I saw first specified a value lower than 18K for the new value. I didn't try any other values so don't know if the lower value was necessary or not. Taking on wire lead resistors probably looks unprofessional but it works just fine.

Joe, I think I knew you back in St. Louie in the old days when I was W0OLZ?

Anyway, I haven't done this mod to my 850 yet (ALC fluctuation) as mine isn't so bad as to get me sufficiently motivated. I was thinking that I really don't want to unsolder the 22k resistors if I don't have too. So what value could I put in parallel and get the desired 18k. If my math is right a 100k resistor across each should get close. Now I wonder if that works physically? I'll go find the picture for that.

I may get the case opened up again soon!

John if you put a 15K in parallel with each it will knock them down to 18.5K Probably as close as you will get.

Max, that can't be right - a 15k resistor in parallel with any other resistor cannot possibly result in a net resistance higher than 15k.

In fact, 15k in parallel with 22k is about 8.9k . 100k in parallel with 22k is very close to 18k (off by less than 0.2%).

73,
Rich VE3IAY

Yep sorry....brain fade. Should be around 95K in parallel.

Max

# 3942. Please keep it short

Date: 2005-11-17 12:12:59 UTC
From: max_ve3tmt
Topic: 3942  Message: 3942

As mentioned in a previous post, it would be helpful to all reading the messages if you can edit out any irrelevant information before posting. Some of the threads I see are so long, you forget what the original subject was. It makes it easier for all of those reading the posts to keep them short and to the point.

Thanks for your help,

Max VE3TMT

Bill is this one that I worked on for ya? Can't
remember.

Anyway it's going to be the PLL circuit and probably
will come back.

Just re-seat the ribbon connectors on the VCO unit,
under the speaker and the cover that the memory
keyer/voice units attach to on the left side.

I have used values here from 10K to 18K successfully,
it is not critical in the dc-dc circuit.

# 3955. TS-850 RX & TX audio problems

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-11-18 01:47:30 UTC
From: kb1kox
Topic: 3955  Message: 3955

First, Thank you Bill for this group,nice to find good technical info at the touch of a keyboard.
My TS-850, ser # 50300007 has developed the often talked about flaky audio and rf on TX in ssb ,from all the research I've done,its probably a problem with the DDS chips on the CAR board.
I'm fortunate enough to have 2 of these fine rigs,So I'm able to troubleshoot and repair the one with the problems.I'm going to do the ALC mod and the NB mod while on the bench,and while I'm confident in my abilitys, the challenge of soldering SMD parts is a bit much,therefore I'm planning on just buying a new CAR board from Pacific parts, a bit pricey, but an easy swap. Is there a way to make sure the DDS chip(s) are bad before I order this part?And is there anything else I should do to the rig while it is on the bench? Thanks, really appreciate this group! 73 all, Neil, KB1KOX

# 3956. KENTROL v. 5.2

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-11-18 14:05:13 UTC
From: scottpa1960
Topic: 3956  Message: 3956

Hello, I'm new to the group and looking through the past posts, mostly those pertaining to my TS-450SAT. My dad (N3FWI) purchased it new back in the day, but never used it. I had become inactive in ham radio and sold virtually all ham gear in 1996. Dad asked me in 2002 if I could sell the rig on eBAY. I decided to bench check it to make sure it works, and made an antenna for it. Well, lets just say the bug hit me big time as I fell in love with the digital modes. I'd never heard of PSK before, and using the computer sound card was awesome. No need for my old MFJ 1278!

Ok, the reason for this note. I discovered a program called KENTROL v.5.2 on here, and I d/l it. While setting up, my only choices were COM1 thru COM4. I need to configure for COM6. Does anyone know how this can be achieved? I do use Ham Radio Deluxe (HRD) and it controls the rig fine. What attracted me to KENTROL is you can save your memory channels, and reload them if I would have to reset the 450S. Are there any other advantages the KENTROL might have over the HRD program?

Thanks,

Scott
KN3A
(going back to my old WY3X callsign whenever the vanity program starts up again though).

Topic: 3956  Message: 3957

Hi Scott,

I'm the one who put the Kentrol program there. I've used it with many computers on both my TS-440 and TS-850. I don't know how to add a COM6 to it, though. The most COM ports I've ever had on a computer is 4. Do you really need 6 com ports?

No experience here with Ham Radio Deluxe. Kentrol is pretty versatile, though. There are only a few functions you can't activate with the free version.

More and more computers are coming without the DB-9/DB-25 connectors for COM1/COM2 and the USB ports on many laptops are start at COM5 and COM6.

My laptop has no RS-232 com ports so I use a USB hub that provides both DB-9 and DB-25 RS-232 connectors and their com ports are COM5 and COM6.

I tried KENTROL, too, but supported com ports were not available on my laptop. I use HDR now, not that I like it all that much for rig control, but it is better than nothing.

I ran into similar problems with CT by K1EA. The program does not support Windows XP because it performs direct writes to devices (com ports) and under Windows XP direct device writes it not permitted. There are software tools that fake out the software to keep XP happy, but that is a bit clunky. I've now switched to WriteLog, which supports XP, but still does not support more than COM1-COM4. I have to use my Kenwood IF-232 (I have a USB interface for the Kenwood radios) to get COM4 through a DB-9 RS-232 com port.

If you are looking for a radio control program that can store memories for the radio, you might take a look at the freeware DXLab suite of programs, specifically Commander (http://www.qsl.net/civ_commander/). This supports COM1-COM16 and has 10 banks of 10 memories. I believe these memories are in software, i.e. I think they are not the same as the radio's built-in memories, but I could be wrong - I haven't tried to use them, as the only memories I have ever used on my TS-850 are the five Quick Memos which are not accessible via software control. I have used Commander to control my TS-850 through a USB adapter, and it works well. There is a very active user group for DXLab here at yahoo (http://groups.yahoo.com/group/dxlab/).

In addition to Commander for radio control, DXLab also has a logging program, a DX cluster program, a propagation program, a QSL address lookup program, a DX mapping program, and a PSK31/RTTY program. These programs all interoperate as a unified suite - you can use as few or as many of them as you choose.

For contesting, which someone else mentioned in this thread, N1MM Logger (http://www.n1mm.com/ - also freeware) supports radio control, PTT switching, direct CW keying, and K1EL's WinKey serial CW keyer on COM1-COM8 (real serial ports or USB-to-RS232 adapters). You can also do PTT and CW keying from any of LPT1-LPT3, as well as antenna switching, and switching between radios for SO2R (single-op two radios). And you can use the computer's sound cards as digital voice keyers, or to generate and decode RTTY (N1MM also supports external TNCs). There is a very active yahoo user group for N1MM Logger(http://groups.yahoo.com/group/N1MMLogger/). Warning - if you are not into contesting and contesting software, you will probably not find this program useful - it has zillions of contesting-only features, but it does not support general non-contest logging, etc. For that you should look at DXLab (e.g. the DXKeeper logging program).

Good morning gang.

There is a complete auto tuner for the TS-850S on ebay right now, if you don't have one...

Search...

"Internal Automatic Antenna Tuner for Kenwood TS-850S"

... and it will pop up.

It's $49.99 right now, (but won't stay like that long ;)

It's not mine, and I have nothing to do with it.

Topic: 3956  Message: 3965

tricky when you are dealing with so many's registry. mine was brand
specific, I think, but basically he had me search in the registry for com5,
and edit to com 3 all occurances. then the same for com 6 and rename to com
4.

This assunes that you have NO com3 or com4

If some one can give me a valid link to kentrol, I could try things here

remember, always backup your registry, and please do NOT blame me if it
stops working after...

# 3966. TS-450 fluctuating alc /power

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-11-19 10:35:35 UTC
From: pa3gdskenwood
Topic: 3966  Message: 3966

Hi
Is there allso a mod for fluctuating alc and power readings for the
TS450?
Hope someone can help me.
Thanks in advance
Math, PA3GDS.

# 3967. My TS-850S/AT...

Yahoo group: TS-850_450_690 (2001 — 2005)

may be available soon. Seriously considering getting a Ten Tec rig. The 850S-AT has the tuner of course, dual International Radio CW filters and a narrow sideband filter, SP-31 speaker, MC-50 and MC-85 mikes. Bill, K0ZL, changed battery, performed the NB, sidetone and DC-DC mods and aligned early this year. Very clean except for a missing spot of paint on top of front panel. (I cover with an audio filter). Anyway, looking for some advice about
best way to sell--if I do. Not anxious to go the eBay route. Any radios I've sold before have
been done locally.

Gary - W7TEA

Hi Gary, I have had good luck using eHam.net also QTH.com both free
and easy to use.

Hi all,
I have a problem with my TS450S.A few weeks ago I buy optional INRAD 2.1khz 8.83 filter.Work perfect.Today I repair a second hand AT450 internal tunner.(PCB line was break).I install it and rig wont work with it.Only when I remove the filter radio works with AT.Whats wrong? Exist any simple solution work with filter and AT tuner together?
Thanks TOM

Tnx, Al. Have not posted at either site so that's helpful. Other radios I've sold have been to
locals who could come and turn the knobs to see if the rig fit their needs--you can see how long I've it's been!!! Don't like buying sight unseen but that is the way of the world it seems.

tnx, Gary - W7TEA

# 3974. Favourite Software to work with my 450SAT ?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-11-23 02:00:34 UTC
From: ve9xyz
Topic: 3974  Message: 3974

OK so now I'm really having fun with my TS-450SAT now that I built a good interface with it (see what I uploaded to the files section for good details about its construction if interested).

I'm using Ham Radio Deluxe, Amateur Contact Log & Kenwood Smart Memory (one at a time, I'm afraid) but wondering if others have found even better software. I don't know about Kentrol...

I'd like to hear what you use, and what you think of it.

73

Kevin

Kevin,

I also have a TS-450SAT. I am using the Rigblaster Nomic for the interface. I use ACLog, Ham Radio Deluxe (along with PSK Deluxe), and fofor all other digital modes, I am using MixW 2.16.

Look for you on the digital modes!

Well Kevin as you know I spend all my spare time looking for control software for the 850. I use Ham Radio Deluxe amd ACLog for DX spotting and looging. I recently came across a program called SD and it is a contesting program with logging abilities and rig control. It features templates for many worldwide contests and I plan on using it in the upcoming Canada Day winter contest. I have prerecorded messages and saved them into the program so for example I can push F1 and it will key my radio and send my CQ call, then switch back to receive. I log the contact then do it again. It will allow up to 8 different messages and will save CW calls too. It is really a very neat program. So if you hear me during the contest you will have to ask yourself "Is it live or is it Memorex!"

Hi Kevin et al

For a really good contesting program, check out www.n1mm.com for N1MM Logger. This is freeware and has a great rig control capability. For RTTY work, MMTTY is a great freeware program. I use that with N1MM Logger for RTTY contesting. There is also another freeware program, MVARI which works good for RTTY and PSK.

Thanks Joe,

The camera I had at the time was cheap! Wish I had taken better pictures myself. I'd love to see your, we can post them in the files section.

Allan,

I just downloaded the file, unzipped it using Winzip, then viewed all
files. I think the problem is on your end.

Max

# 3985. Re: New file uploaded to TS-850_450_690

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-11-24 13:47:47 UTC
From: Richard Ferch
Topic: 421  Message: 3985

I just downloaded the zip file and tried to open it with Windows XP (which has built-in support for zip files; works great with all other zip files I have tried). XP would not unzip the file - it gives me a "Compressed (Zipped) Folders Error: File skipped unknown compression method" error message. Sounds like you used a non-standard compression method that is not supported by Windows XP or winrar.

73,
Rich VE3IAY

# 3986. 850 problem, transmit 50 watts of carrier or more without microphone in USB mode

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-11-24 15:06:55 UTC
From: javijust
Topic: 3986  Message: 3986

Hi

Could you help me?.

I've a TS850 it works fine but I think there are a problem in
adjustment.
In TX without a microphone or with microphone connected, putting
in USB in all bands (no in LSB) with a 50% of mic gain or more and
a low processor speech gain (10% or less), it transmit a carrier of
50 watts or more, in a receiver the signal is clear !!,
desactivating the processor returns to 0 watts.
The normal operation that works well with a MC60 or hand mirophone
is mic gain in position 2 to 3 and processor in 6 to 8, then the
output is 100 watts speaking and about 10 watts with the noise of
the room , getting more mic gain i can see that there is a carrier
of 25 then 50 and more watts, ALC meter is always low and COMP meter
less than 10 db. If ALC meter is at 75% speaking when I don't speak
I can see a the carrier in the power meter

I think that without microphone connected and processor activated
for any mic gain when TX it would not send any carrier.

Try master reset, A=B then power up.

Then, see if you can re-seat the ribbon cable
connectors to the CAR unit, under the speaker area,
underneath the filter select board.

Decided not to buy the other rig, so the TS 850s still will sit in its place of honor for the time
being.! It's such a good rig, I hate the thought of selling it anyway. Could never get enough
on the used market to match its real value I'm afraid.

tnx, Gary

Very wise decison Gary, and I speak from experience. I have owned and sold three 850's and regretted selling each one (after the fact!). You would think I would have learned the first time. Anyway I now have my fourth and it will not be going anywhere soon. I found exactly what you said, you will not find anything on the used market to match the performance of the 850, other than another 850!

Topic: 3991  Message: 3991

Has anyone used their 850 with a TenTec QSK capable linear amp on CW? I have a Centaur--a 500 watt 3x811A amp from late 90's. Following the rather meager directions in the amp manual, I connected an external keyer to the amp and then the amp to the key jack in the back of the 850. The linear amp switch and internal keyer switches were both off. It seemed to work perfectly--QSK like I was using a TT transceiver with its Key en and Key out jacks to
effect QSK timing.

I'm concerned about playing around too much in case I burn a relay or some such thing. Anyone have experience with any of the TT amps--Centurian, Titan, Centaur, etc??

tnx, Gary W7TEA

What is the symptom? Leaking tantalum capacitor? Or no RF carries.
There are four outputs, all should be visible on a 100MHz oscilloscope
with several volts each.

If it's the DDS chips, N6TR had keps an inventory of spares for a
while, you might check with him.

From: Dave
Topic: 3996  Message: 3996

This weekend was my favorite contest - the CQ Worldwide CW DX contest. It's quite a test for the operator and the gear. The TS-850 did well. I never experienced a single incident of front-end overload, although there was more than one time that the ALC could not cope with the sheer magnitude of some of the signals. The first time I noticed the ALC overshoot was when my neighbor a mile away called a station I had just worked - a kW pointed directly at me.

First time I treid this contest was with an Icom IC-735. That rig's front end overloaded so badly that more than half the signals I heard weren't real.

On the '850, I used the outboard SCAF-1 filter to overcome the IF filter blow-by.

I remain convinced that the '850 is a great contest radio.

Hi Bill
Thanks very much for answer, I tried a master reset and a re-seat ribbon cable but also fails, then I've found a 'CAR supression' adjust with VR8-VR9 in IF-UNIT. Without microphone and in TX USB it send 50 watts output ( gain mic 60% and processor speech 10%)I have moved VR9 a little to right, I have seen that power goes down and after a little more goes up. I turn VR9 to the minimun CAR output and then the same with VR8. I closed the transceiver and try with real operation and works fine, now with the same conditions the power output is zero.

# 3998. RE: TenTec linear amp

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-11-29 03:50:19 UTC
From: Randy Brothers
Topic: 3991  Message: 3998

I offer the following re the 425 - it's on mods.dk and some other web sites.

Randy K9OR

---
TS-850 and Ten-Tec Titan 425 PA

If you're using the Kenwood TS-850S with the Ten-Tec Titan 425 linear PA
read this!

This explains how to modify the TS-850S' full QSK feature and avoiding "hot
switching" the relay in the amplifier when operating full QSK.

As you probably know the correct way to prevent "hot switching" is to feed a
signal to the Titan's "key-in" connector when you transmit. When the
linear's vacuum-relay is settled the Titan's "key-out" connector return that
information to the transceiver which then feed its output RF to the linear.

What's important here is that the transceiver DOES NOT feed any RF BEFORE
the vacuum-relay in the linear is settled!
(If you do, you have the problem called "hot switching")

This is how to overcome the "hot switching" problem:

Open the TS-850 and do the following:

Remove the original TRX-relay (K3 at the RF unit).
Remove the IF unit.
Locate the BK-SW unit (X59-3880-00).

Cut between Q2's collector and pin 10 on the BK-SW unit.
Feed Q2's collector to the "key-in" on the Titan linear.
Feed pin 10 (where you cut) on the BK-SW unit to the "key-out" on the Titan
linear.
Reinstall the IF-unit.
That's all!
I connected the collector of Q2 to pin #4 on the REMOTE connector and pin
#10 on the BK-SW unit to pin #2 on the REMOTE connector at the rear of the
transceiver where you originally connect the keying of an amplifier.
That's why you should remove the TRX-relay (K3) as described in point no. 1.

Pin 4 on the remote connector should now be connected to the "key-in" on the
Titan amplifier

Pin 2 on the remote connector should now be connected to the "key-out" on
the Titan linear.

ONLY use shielded cables!!!

This modification works fine on my TS-850. I am able to operate full QSK at the maximum speed on the built-in keyer unit without risking any damage to the vacuum-relay in the Titan at full output power (1600W).

I just picked up the 850 after using a 450 for a number of years. The rig came with the kenwood 500Hz filter on the 455 side. I have the 500Hz filter for the 8.83 side is there any benefit of having the 500Hz filters on both sides?.
The covers had never been off. so I had a look at the battery, It shows no sign of corrosion, shows 3 vdc. Should I change it anyway? Is there anything else that I should look for?

Thanks Wayne (VO1TA)

Wayne,

The extra filter will definitely help on cw - I run 2 on both my 850s - sounds like you found a good deal - the 455 IF filter is the the better filter, but you will gain some by ading the 8.83! I would change the battery - better to be safe - I have had both mine replaced!

I would get 500hz filters for both IF's. You then can narrow the passband from either side or
both sides to achieve very narrow filtering action.

# 4002. Cascaded SSB filters?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-11-29 18:50:39 UTC
From: Dave
Topic: 4002  Message: 4002

The 850's receiver performed well during the CW 'test. I'd like to make the filtering more convenient and workable. Presently, my '850 has completely stock SSB filters - whatever it came with.

I have cascaded 400Hz Inrad filters for CW, and they're wonderful. None of the blow-by that existed when I had Kenwood 500Hz filters installed.

But during a contest, stations are somewhat slack (sometimes inentionally) about zero beating, and what I really want to be able to do is to vary the IF bandwidth from a low of, say, 400-500Hz up to about 1.5-2kHz. Of course, that's the purpose of the slope tuning controls.

However, when I try this using the two SSB filters cascaded, it's less than satisfactory. I have to crank things down mightily to get any benefit at all and then, the skirts are very gentle.

So, I think I need to get a pair of Inrad SSB filters for this purpose. As a CW op, I'm inclined to go with pretty narrow filters, but I don't want to compromise SSB too badly, as there's another ham in the household who is more focused on traffic handling and emergency comms, which is a 75 meter SSB activity in these parts.

Inrad offers SSB filters for both IFs at 6dB bandwidths of 1.8, 2.1 and 2.8kHz. Has anybody tried more than one BW, and can indicate at what BW the SSB intelligibility starts to suffer? My suspicion is that 1.8kHz would sound restricted no matter what. 2.8kHz is certainly wider than any SSB filter I've had in previous radios. What about 2.1kHz? Anybody using a cascaded set? If so, how is it for phone? And do they give the wonderful variable IF for CW and not exhibit the blow-by problems of the stock filters?

I guess the other little question is - what filter does the rig use for SSB transmit signal shaping? Can I leave in whatever the present "wide" filter is, and only enable the new filters on RX?

TIA ES 73

Dave,
As long as you do not replace the stock filters you can continue to transmit thru them. There is a menu setting that allows you to select your transmit filters just as you can your receive filters. See www.mods.dk/view.php?ArticleId=792

Yes, definitely.

With one filter, you have passband shift, so you can move that 500 hz window up or down to block an interfering signal from one side or the other... but with both, you can move one down, and the other up, so as to narrow the window on both sides - effectively making the filter any "width" you want from 500 hz down to "0".
That's why they offer both.
I have both installed on my TS-850SAT

If it's convenient to change the battery, then do so while you are working on it - it'll give you another 10 to 15 years of no worries.

Yes, slope tuning is the way you get variable bandwidth. With two filters cascaded - one in the 8.83 MHz IF and one in the 455kHz IF - you move one filter with each knob. The net effect is that one knob controls the position of the lower skirt, and the other knob controls the position of the upper skirt, of the "synthetic variable filter" that you get when two filters are cascaded.

As a bonus (or as a primary reason to use cascaded filters, for us contest types), when you cascade two filters, the ultimate rejection of the cascaded pair equals the sum of the two filters together. When I had the OEM style Kenwood 500Hz filters installed, I found them sadly lacking in the ultimate attenuation characteristic - definitely had to have both enabled, or it just wasn't much of a 500Hz filter.

The filters are controlled by two concentric knobs.
You can grab both of them and turn CW or CCW and you get IF shift - but
if you turn one knob one way, and the other knob the other way, together
they close the IF window and narrow the bandpass.

Thank you for the explanation.

I tried this when I got home. This works great!

I've been using my TS850S/AT since 1995 and never knew I could use the filters in this way. I thought the filters together only provided a slightly narrower filter range, but this is GREAT. I wish I knew about this last weekend for the CQWW CW contest.

I am amazed by the stuff I keep learning about this radio. I'm a CW operator with the occasional SSB contact when I can spot a good DX on the cluster. Reading the posts on this mail list is very educational, to say the least.

Thanks for all the great information from this list.

Thanks for the info Paul. I installed the other 500 Hz filter and gave it a go. Works great Wish I had known about this before the test last weekend. We will be ready for the next one. I have a spare replacement battery here so will replace it the first chace I get Thanks again Wayne VO1TA

# 4011. 455 filters for ts-850sat.

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-11-30 18:32:41 UTC
From: David Quental
Topic: 4011  Message: 4011

Hello to all.

Name is David, call CT1DRB and a happy ts-850sat owner. My rig has only a 8.83 filter, a 270 hz filter, but I have not 455 filter. Reading some previous emails about this issue, it is advice to use a 455 filter too with the 8.83 filter. Today I phoned to kenwood dealer in Portugal and they said me that they have not YG-455C-1 or YG-455CN-1 because rig is outdated.
So, where is possible to buy these kind of filters???
I am interessed to buy in Euro parte of Europe, but if it is not possible I can buy outside Europe.

Best regards and till next email.

CT1DRB
David Quental

# 4012. Re: [TS-850_450_690] 455 filters for ts-850sat.

You can buy these filters on ebay all the time - if you were looking for one, you should be able to find one for sale in a week or two.

Also, Inrad makes filters (new) that have a very good reputation.

Crystal filters manufactured by International Radio (Inrad) have
better performance and lower cost than Kenwood filters. International
Radio has a dealer in Germany, maybe others in Europe. See their website:

http://www.qth.com/inrad/

and find the "contact us" link. Email them and ask who their dealers
are in Europe.

The list of Inrad filters available for the TS-850 is found here:

http://www.qth.com/inrad/TS-850.htm

# 4014. RE: Cascaded SSB filters?

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-01 07:11:03 UTC
From: Randy Brothers
Topic: 4002  Message: 4014

Dave,

I use the 400hz Inrads as do you for cw, although I never had any problems using cascaded KW 500hz filters. I just prefer the 400 width. My cw dxing/contesting 850 has 250/400/400 Inrads.

I have another 850 with 1.8 and 2.1 Inrads in cascade. The cascaded 2.1 doesn't make as much difference to my ears on ssb as the 2nd cascaded filter does on cw. For most ssb dxing and contesting, I find the 1.8 in the 8.8 slot to be sufficient.

For general use on a crowded band, the 2.1 works well without the pinch of the 1.8. I don't do a lot of hf ragchewing, but when I do, I typically find the stock filters more than adequate unless there's someone splattering nearby.

I had not considered using the ssb filter setup on cw, but a little experimentation the last 2 evenings suggests that while it might give you some of what you're looking for with the VBT at the broad end, you would not be happy at the 400/500hz end.

I would suggest you put a 1.8 or 2.1 Inrad in the open 8.8 slot and keep the 400's cascaded.
That way you can get a little better performance in the 1.5-2.0 Khz range, and have some ssb selectivity when needed.
You would miss those 400's very quickly.

Subject: Cascaded SSB filters?

I have cascaded 400Hz Inrad filters for CW, and they're wonderful.
None of the blow-by that existed when I had Kenwood 500Hz filters installed.

...what I really want to be able to do is to vary the IF bandwidth from a low of, say, 400-500Hz up to about 1.5-2kHz. Of course, that's the purpose of the slope tuning controls.
.....

So, I think I need to get a pair of Inrad SSB filters for this purpose. As a CW op, I'm inclined to go with pretty narrow filters, but I don't want to compromise SSB too badly, as there's another ham in the household who is more focused on traffic handling and emergency comms...

Inrad offers SSB filters for both IFs at 6dB bandwidths of 1.8, 2.1 and 2.8kHz. Has anybody tried more than one BW, and can indicate at what BW the SSB intelligibility starts to suffer? My suspicion is that 1.8kHz would sound restricted no matter what. 2.8kHz is certainly wider than any SSB filter I've had in previous radios. What about 2.1kHz? Anybody using a cascaded set? If so, how is it for phone? And do they give the wonderful variable IF for CW and not exhibit the blow-by problems of the stock filters?

Inrad filter are cheaper and have a bigger ripple.
I prefer the Kenwood filter.
You also have to cut something in your radio to fit them in.

Sounds like a 2.1 and a 1.8 together might be worth a try. They'd fit the SSB slots, and I'd leave the pair of 400Hz filters in the CW slots. Over the whole CQ WW weekend, I may have had the pair of 400Hz filters in place maybe 20% of the time. Most of the time I cascaded and narrowed the SSB filters, using an outboard SCAF to "fix" the monstrous blow-by. Hopefully with 8-pole filters instead of whatever Kenwood supplies stock, the resultant skirts would be steep enough to be worthy. Curves on the Inrad website suggest the actual skirt slope is not substantially different between CW and SSB filters at the same IF.

Ron, do you have the performance curves for the Kenwood filters
available? My SSB filters seem to have a bit more ripple than what
Inrad shows on their website. Honestly, though, I don't find ripple
to be objectionable, compared with the "soft" skirts on the low-order
OEM filters.

Hi Dave,

They can be found on the net.
Can't tell you where. I found them perhaps on the Kenwood USA site ??
The 1.8 SSB filter is a waiste of money. To critical to tune.
For weak signal: you lost the station when you get it tuned.

The inrad filters have can have also more ripple than they advertise.
I have got them here as well.
Only advantage is Inrad has other filter options.

Cheers
Ron VK6KDD

# 4020. Re: [TS-850] Re: Cascaded SSB filters? - Another view.

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-01 20:00:56 UTC
From: Paul
Topic: 4002  Message: 4020

Hi folks.

I'd like to toss in another thought on this. I'm not proposing either the Kenwood filters or the Inrad Kenwood filters.

There are those that love to knock factory filters as "junk" or "too soft", or some other condescending term. Not me.

I have also known and dealt with Inrad some 20+ years ago, back when they were "International Radio" even before they were "International Radio & Computers" down in Port St. Lucie, Fla, and these folks are damn sharp (badd pun ;)

My TS-850-SAT has both the Kenwood 500 hz filters (plus others) and it has been fine - they have NOT been a limitation for me. I use an outboard DSP audio filter not because the IF filters are soft, but because of the auto notching and other goodies.

But here's the rub... The TS-850, is my portable, field day, go outside in a tent radio.

My "base station" radio is an Icom 756-Pro-III that is fully digital DSP in the IF stages - it has a humongous receiver.

In it, you can vary the skirt shape of the filters from "soft" to "Hard"... so sharp that they would give Inrad wet dreams.

In the sharp position, as you tune the bands, stations just POP in the passband, and then POP out in an instant.

Many Pro-III owners call Icom and complain that these filters are too hard - that they want to hear stations come into the passband slowly, coming in at low volume and getting louder as they come to the center of the pass band - it helps them listen for stations and work pile-ups in DX.

Icom then explains to them that they can adjust the filters to the shape they want (It's called READ THE MANUAL, DUMMY).

I agree - a hard filter can be a handicap when crawling through the 300 other bodies that want Spratley as much (or more) than you do!

So, my advice is this... don't assume that sharper is always better - think of how you operate, how you listen, and whether you are a caller (CQ DX), or a hunter/pouncer, and then pick the filters that match your style of operating

Paul - K2BL

Paul,

Your advice is well-heeded. How sharp one wants filtering has to do with operator preference, whether you're doing Field Day and want a "wide as a barn door" effect and so on.

Short of DSP, I think the '850 does pretty well at giving the ability to tailor the skirts. For the most gentle skirts, I can dial in an SSB filter in one IF, and an AM filter in the other IF. For a bit sharper skirt, two SSB filters. I have an outboard SCAF-1, which is an eight-pole filter. Presuming that Kenwood's filters are four-pole each, then I can create something close to a sixteen pole filter with the combination. That is, in fact, quite sharp enough, but the outboard SCAF is actually doing most of the work, and signals that are outside the SCAF, but inside the IF filters, still pump the AGC, so it's not great.

I find the cascaded Inrads on CW to be perfect when doing very weak-signal stuff - DXing on 160 meters, where you need all the help you can get. I even use the slope tuning to narrow them down a bit. But the SSB filters, I find too wide for any activity that I engage in.

That's why I'm seeking something in between.

I cut my teeth on rigs with flexible filtering - the Drake receivers. Always had shiftable center freqs, and I always had a Q-multiplier in addition, so I've always had variable BW and CF in the IF in my radios. I felt downright crippled when I got my first solid state radio, a TS-120S. It had IF shift, but no method of varying the bandwidth.

The behavior you describe - a station simply popping in and out as you tune - that's what I get if I cascade the two Inrad 400Hz CW filters AND the outboard SCAF. When I do that, I have 16 poles in operation and for my tastes, that definitely is too sharp. Happily, it does not ring, at least.

Interesting discussion.

73,

Dave W8NF

# 4022. Kenwood filter for sale

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-02 02:18:28 UTC
From: n7ioh
Topic: 4022  Message: 4022

All this talk about filters. I thought I would mention again that I have for sale the Kenwood YK-88S-1, 2.4 kHz SSB filter for the 8.83 IF. The filter is like new and comes with the directions. I was told that Kenwood is not making these any more and INRAD does not make a 2.4kHz for the 8.83 IF. This filter fits a multitude of different Kenwood radios. The price is $90, this includes shipping in the US and Canada. Please contact me directly.

Thanks, Al, n7ioh

Hello Dave.

Your mention of the Kenwood 120 rings a bell - I have both the TS-130SE, and the TS-130V (QRP version),
and have them both fitted with the 270hz and the 1.8khz filters - though the filters are "narrower" than most would like, the walls allow very comfortable use on field day, (under primative conditions when I won't take out the TS-850).

Paul - K2BK

Well, I'm massively impressed that you can even USE a TS-130x on Field Day. I took my TS-120S out on Field Day once. We had a 2A setup, and the other guys were using Collins gear. The TS-120 receiver was incapable of functioning when the other station was on the air at all. Perhaps if we'd built up some narrow bandpass filters, we could have stayed on the air, but without said filters, the '120 was simply not up to the task!

FD 2005, we had a very small groups of guys, all employed in the high-end test and measurement industry as design engineers. I had no qualms about bringing my TS-850, and neither did one of the other guys, who also brought an FT-1000D that we did not use. The two '850s were superb. Even with no bandpass filters, we were able to operate one on CW and the other on SSB on the same band, and not hear each other. The two radios sat on the same picnic table, operators on opposite sides of the table, so the "connector end" of the rigs were just about kissing each other.

The only problem we had with the '850s on FD wasn't due to the '850. Our six meter station used an Icom IC-706, which transmitted broadband hash any time it was on the air. We could hear it on all HF bands. Next year, we WILL have bandpass filters for that Icom.

Ron,

Menu item # 22 (LSB/USB button + POWER ON) says "REVERSE MODE" Not sure if this will work. You can try setting it to ON and see it that's it. It really doesn't give much description in the manual. If not, turn it back off and just reverse the lines on the paddle plug.

From: Danny J. Conner
Topic: 4030  Message: 4030

Hi all,

I have a TS-450S that I got and someone else had worked on it. I've got it working except the Sidebands are mismatched. VR4 on the RF unit had some control on it, but the LSB will only produce about 25 watts while the USB produces 75 or better. The other issue I'm having is the power out. To obtain full power on SSB, FM will produce 150watts. I'm looking for ideas. I did attempt to balance the USB / LSB using the menus but they're still off.

I appreciate any and all help.

73,

Danny

I had the exactly the same problem with my TS850SAT earlier this year, it turned out to be a leaky cap on the AGC board. So I got another AGC board from East Coast Transistor, part No:

X59-3820-00 (AGC)SUB UNIT TS-850S cost then was $ 15.08

# 4034. TS-450S "Matching" Power Supply

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-05 03:31:36 UTC
From: ve9xyz
Topic: 4034  Message: 4034

My manual says that the "matching" PS for my TS-450S is the PS-53. It also lists the PS-33 but doesn't say anything about the differences. I've got a possible line on a PS-52 but for all the $$ that this thing will cost me, I'd really want this PS to "match' my TS-450's dimensions - I can't get the specs on this despite my googling. Some day I'll have a tidy shack and would really prefer a matching PS.

So here's my questions:

1. what is the difference between the PS-33. PS-52 & PS-53 (specs and dimensions)
2. do these things have noisy fans that would make me regret owning one?
3. What is the typical price I should expect to pay?

or you can do as I did, I have the paddle and straight Key on a mounting board so I put a switch in line so that I could use the paddle with dah's on the right and dit's on the left and my wife can just flick the switch and reverse the paddles. It works well for us.

PS-33 (20.5A) / PS-53 (22.5A) match the 450/690
PS-52 (22.5A) / PS-31 (20.5A) are taller, match the 850

Don't know the answers to the other questions.

Kevin,

According to my Kenwood Catalogue....

The two matching supplies for the TS450 are:

PS-33 20.5A or PS-53 22.5A

The PS-31 and PS-52 are taller and are designed to match the TS850.

As for dimensions, the above supplies are the same height as the
respective transceiver. I had a PS-52 in the past as well as the
matching SP-31. I have long since sold both. I use a homebrew 25A
supply and a Sony 2-way bookshelf speaker which sounds much better
than the Kenwood. In my opinion, if you want everything to "match",
you have to pay for it. Matching accessories command a much higher
price than their generic counterparts, and they are usually way
overpriced. My power supply might not be a pretty as the PS-52 but it
is under the desk out of sight, and well the response I get from the
speaker speaks for itself. Expect to pay around $200 US for the supply
and $75-100 US for the speaker.

Several hams, including myself, have had noise problems with the
Samlex on 80 and 160. It's curable with beads and capacitors.

But I think in general, simply getting a good beefy linear regulated
supply is the answer. If you engage in a variety of ham activities
(as we all should, per the amateur's code), then desktop space very
quickly becomes a premium, and since you never need touch a power
supply, you'll quickly set it on a shelf nowhere near the radio.
Problem solved - power supply need not visually match the rig!

Same thing happens quickly with speakers. I only listen on speakers
if the rig's on in the background and I'm working at the bench,
otherwise I wear 'phones. Therefore, my speakers are on a high shelf,
nowhere near the rig, and need not match the rig's appearance.

From: sailfree4me@netscape.net
Topic: 4042  Message: 4042

Back in the Day...

They put speakers in the power supplies (or vice versa) and they did a good job. The matching supplies that I have had for the TS-430 and TS-850, of course, didn't have a speaker.

My Dad has the matching supply and speaker. He bought the supply from me because you couldn't convert it to 240 volts and I was shipping overseas. He acquired the speaker and it is so-so in operation.

I used the PS-430 with the 430 then the 850 overseas and it worked great. Best thing was it was switch selectable on the bottom 240/120 volts. It stayed in Morocco with a local ham when I left.

Now the tie-in to the first sentence. I use a Swan PSU-5A with my 850. You youngsters won't remember Swan or it's move into solid state before disappearing into the Cubic name. Well this is a nice 20 amp linear supply with a GREAT speaker built in. It went with the 100MX transceiver. It doesn't look right, but it works fantistic. If it didn't it would be out of sight as others have suggested. Why have a supply up front that you don't operate or listen to? The supply for my Drake TR-7 is an Astron 35 under the bench linked up to the on-off switch on the transceiver.

Just a little flavor of my shack with some opinions thrown in!

Topic: 4043  Message: 4045

Just to clarify further, they are called the "WARC" bands, because they were granted to ham usage by action at the World Administrative Radio Conference, in 1979. At that conference, the frequencies were allocated, and over the ensuing years, governments in various countries began permitting use slowly.

There is one erroneous bit of information that you will encounter - it is often said that the legal power limit on the 10.1 MHz band (30 meters) is 200 watts. That is true in the US. There are other countries where the legal power limit is as high as 1.5kW. So, don't assume someone is trying to do something illegal if he wants to modify his Alpha to run on 30 meters!

Topic: 4046  Message: 4046

Hello All,

I have seen in the TS850 manual a direct connection from the remote connector at the rear panel to the ALC & REL in the amplifier. Do I need an interface like the N0JX for vintge amplifiers like SB220? or I have no problem connecting that directly?

Have any of you ever tried go full QSK on the TS850 with the amplifier without the QSK vacuum relay? what is the max wpm rate you get without hot switching?

Thanks for your help
Antonio

TS850 works QSK with Ten Tec amps. I have a Centaur, a late 90's 500w amp. You have to use an external keyer. You run your keyer to the key in jack on the back of the amp and then
a line from the key out jack to the key jack on the back of the 850. I don't know how fast it
will run. I only send about 20-25wpm and it seemed to keep up fine.

Antonio, I don't recommend full QSK with any relay'ed
amplifier.

You do not need an interface for the sb-220; I have
run mine for years with just the connecting cable;
also the SB-200.

If an amplifier relay is slow, you will hot switch in QSK or non-QSK mode. The radio will be transmitting before the amp's relay is done switching.

The only sure-fire fix is to develop a circuit that first keys the amp, and only keys the radio after the amp has been keyed. Ten-Tec and Alpha amps have this feature built in. For other amps, you have to build outboard circuitry and/or modify the amp.

Most rigs (the TS-850 included) delay the RF output just a tad...so the "amp key" line goes low, then after a slight delay, the RF output engages. You'll need to use an oscilloscope to see this timing, then do similar measurements on the amp, to ensure no hot switching takes place - or let the amp do the sequencing.

I haven't gone to the exotic meausures mentioned above. Instead, I use a footswitch to key my SB-220. Interestingly enough, the T/R relay on that amp has such poor isolation, that I can leave the TS-850 in QSK mode, and still receive through the amplifier. Doesn't work with very weak stations, but it works for most signals. Having the footswitch also allows me to choose whether or not to use the amplifier on a per-transmission basis, and not have to turn off the amp when I don't want to use it.

I'm rebuilding an Alpha 76. It was prior to the date that Alphs put sequencing in the amplifiers, but I plan to put vac relays and sequencing into the amp. I may decide I don't like it, but I just have to try it!

73,

Dave W8NF

# 4050. TS-450SAT Audio problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-09 02:17:00 UTC
From: Tom Osborne
Topic: 4050  Message: 4050

Hi All

My TS-450SAT has started weirding out here the past couple of days.

When I turn it on, it comes on for a few seconds then the audio goes off. If I disconnect the antenna and connect it back, the audio comes back on again for a few seconds. I can pull the coax plug out of the jack on the back and the audio comes back on. Touch the antenna to the jack and it comes back on again for a few seconds. Sounds just like a squelch coming on and off.

Sounds like a dirty relay contact or something. I took the top and bottom off and reset all the plugs and jacks on the circuit boards.

HELP!!

Tom W7WHY

# 4051. TS850 interface to TL922

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-09 02:22:25 UTC

Topic: 4046  Message: 4051

Everything that everyone has said is true.

The TS-850S relay was design to key the Kenwood TL-922. No problem with the relay handling it.

BUT, when I hooked up my TS-850S/AT to my Drake L-7 Amp it all worked ok except that I could see on the wattmeter the "Hot-Switching", that is, I would get a RF spike out before the amp keyed and I would get a high SWR for just an instance.

Also I did not like hearing the noise of the relay in the TS-850S.

So the answer was use the +12 volts on transmit from the assc. socket. Key a transistor that then keys the amp. Many circuits have been designed for this so I don't take credit but the one I used sure worked.

I guess my TS-850S has been keying the amp for almost 13 years now. No noise relay.

The circuit I used and how to build it is on my website. The cost of the $4.00 box exceeded the cost of all the other parts.

Anyway a picture is worth a 1K words so give at look at:

http://www.qsl.net/k0bx/amp.html

Happy Keying.

Joe K0BX

Dave... I have an Alpha 77Sx and can tell you that you will LOVE the vac relays when you get them in - I can hear between the dots at 50wpm+ (of course don't assume that I can actuall copy that fast)

;)

The T/R switching time is 2 milliseconds.

Hello Joe K0BX, Gary W7TEA, Bill K0ZL, Dave W8NF and Paul K2BK,All,

Thanks for the answers. Those really helped. Joe, I found the web site some time ago and I even made a local copy of your page. The interface was simple, cheap and maybe fitting into the DIN Audio connector case (I need the metalic case for this). I will start trying keying the amplifier with the internal relay and then get rid of the relay noise in the rig.

Thanks again
Good Dxing.

Replace D31, rf unit, it's an RLS-135. Most likely
leaking DC back onto the TX 8V line.

first check the carrier board caps for leakage. black stuff under the
little silver caps then the DDS chips. then the if board on the bottom for
leakage on the caps.

Someone was asking about the leakage problems that was common to all ts 850s. the caps on the carrier and if boards are prone to leak black junk and eat up both boards. this is a costly replacement if you have to have new boards.. I have 3 ts 850sat's and have one being recapped now by N8UX . he is also doing some of the better mods for me. I suggest that anyone who has an 850 open the top case carrier board is on the right side and the if board is on the bottom left side. check for leakage . i would also suggest you consider replacing all the small silver caps on both boards before they do start leaking . got this info from a tech rep for kenwood.

Depending on whether the front of the radio is facing you or not. With the front of the radio facing you, the carrier board is on the left and the IF board is on the right.

Just a quick question :

How much resistance should I measure for a good gas discharge tube on
the TS450?

My problem is I don't have any power output on my recently repaired
TS450 (finally found the time to replace the DDS IC). Rx on any mode ok.

# 4064. Re: [TS-850_450_690] Gas discharge resistance

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-12 12:00:23 UTC
From: Bill K0ZL
Topic: 4062  Message: 4064

These are inspected visually. They read open all the time, good or bad, unless you have a 1kv source or higher, hi!

The internal element should be solid black; not brown, and there should be no visible lines around the middle of the element. Also the interior of the glass envelope should be clear, not smokey.

If in doubt, replace it.

For no TX, check the traces underneath that filter unit board, some may be fried from lightning.

Also you need to make up a jumper that will allow you to bypass the filter unit on these rigs; straight from the PA to the external meter to the dummy load. It will run without ALC but this will not harm it for very short times and will allow you to very quickly eliminate the filter unit, AT unit and TR relay as sources of trouble.

Tom,
Checkout the help or tech sections of the NOV QST where a similar problem is reported.

# 4066. Raspy Audio from my TS-850S

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-13 02:36:16 UTC
From: Bill Maddock
Topic: 4066  Message: 4066

Bottom line is I replace my CAR board in hopes of taking care of the problem, but it didn't work! It was still sending the UL message in CW and after it ran for a couple of minutes the reciever and transmitter actually worked. It got clear, for a couple of minutes and then the raspy audio returned - seems like I saw something on the TS-850S repair page about a capacitor that goes south and causes the raspy audio and UL id. I think it was on the PLL board - anyone else have this problem?

Now I have a spare CAR board and the problem is still there!

Thanks and 73,

Bill N4ZI

If you've got a service manual ,check pg.98,item #8,that was the cause of the raspy audio on one of my rigs,(was low,around 3.5V) Just be real careful trimming TC1,there is a mod out on the web on replacing it, if you don't want to replace with stock part X58-3390-03,good luck, Neil

What is a used but functional CAR board worth? I had
mine replaced when the display was repaired. It was
working when it was removed. I had purchased a new
one for a spare and decided I might as well be using
it. It has the part number 6631 DDS chips in it.

# 4071. definitely off topic

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-14 04:34:26 UTC
From: Gary ve3rin
Topic: 4071  Message: 4071

I realize that this is definitely off topic but....
I am trying to find out more on the Windom antenna for 160 meters as I think it would serve me better than the loop that I have.
My loop for 160m starts at a good height but the rest of the loop is limited to about 15 feet off the ground.
I can't seem to get accurate or specific info on the matching balun at the apex of the ant. or info on the line isolator.
The sites that I have visited have conflicting lengths for both sides of the dipole as well.
Would any one on the user group have any detailed info on the Windom so that I could build one for use here at my location in Ontario.
The main reason I wish to build my own ant is $$ as I am retired and still helping out the kids.
Thanking you in advance, and seasons greetings

# 4072. Re: [TS-850_450_690] definitely off topic

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-14 14:38:05 UTC
From: Bill K0ZL
Topic: 4071  Message: 4072

A true "Windom" antenna is 1/2 wave long flattop, fed about 14 percent off-center with a single wire, against ground. Presents a moderate to hi-z at the shack, used with a tuner it's very effective but only if it's about 40-60 feet or more up.

The off-center fed dipoles are often called "windoms" but they are not. They are simply off center fed dipoles! It's a way of getting a dipole to work on all harmonics without worrying about matching. In this case, you would put up a half wave on 160, feed it (again) about 14 percent off-center (or, 1/3 of the antenna length to one side of the balun, and 2/3 on the other side) through a 4:1 or 6:1 balun at the feed point, then BIG coax to the tuner so you can make full-band excursions on 160 and 80 meters. Some rig internal tuners will cope with that also.

example:
I want to put up a 1/2 wave on 80 meters, offcenter fed dipole.

The whole antenna is 132 feet if I use 462/f(mhz), and put in 3.5 Mhz. It will also be resonant at 7.0, 14.0, 21.0 and 28.0 Mhz.

If I cut the antenna for 3.9Mhz, it will be resonant at 7.8, 15.6, 23.4 and 31.2 Mhz! so, for the OCF to work well on 10-80, you must cut it long and use the tuner.

So, I would cut your antenna for 1.8 or even 1.75 Mhz, and use the tuner as needed to get a match. I get 264 feet.

then position the 4:1 or 6:1 balun (4:1 is easier to find and will work fine) at the 1/3-2/3 point, in other words you would have the following leg lengths on the antenna:

.666 * 264 = 176 feet on one side
.333 * 264 = 88 feet on the other

Note, if you are much lower than about 70 feet, your antenna will "want" to be shorter, so don't solder your wires at your end insulators, and make them easy to drop for trimming.

Use a good quality RG-8 type coax as there will be
some SWR to deal with. If your internal rig tuner has
trouble finding a match, you can try inserting 10-15
feet of coax in the line, or use an external tuner.

Hope this helps.

go to the 60M group to see a drawing of the OCF dipole
that I use on that band; it will give you an idea of
what they look like.

Alpha Delta also sells the DX-LP 160-80-40 antenna;
it's a little pricy but has good reviews on eham. It's
the one I want to put up because it's shorter and will
fit my lot.

I have a windom based on the plans at www.packetradio.com using
a 4:1 balun. It is cut for 80m but with the tuner in my TS-850 I am
able to tune in 160m as well as everything up to 10m with no problem.

Mine is in the air as an inverted v with the apex at about 60'.
It is fed with about 120' of 9913.

I will probably change it to a dipole for 160m after I get my tribander
(10/15/20) and full size rotatable dipole for 40m up.

Gary,
That is hard to diagnose because of the numerous components
between you and the yahoo servers. It is likely a mail issue
between your ISP and Yahoo. I am not a mod in this group so
I cannot check to see if you are bouncing. But you can logon
to your yahoo id and go to your my groups page and click on
the "my email preferences" link on the right side and you'll see
a link to "show history" under bounce history. That will give you
a place to start.

Hope that helps....

Dumb question: what's a 6:1 balun? A 4:1 balun creates a 4:1 ratio between impedances. The impedance ratio of a transformer is the square of the turns ratio, therefore a 4:1 impedance transformer has a 2:1 turns ratio. Accordingly, a 6:1 impedance ratio transformer would have a 2.4449:1 turns ratio (square root of six). A turns ratio of 5:2 would be very close. Do companies (or hams) actually build these?

# 4081. Schematic Diagram voltage reading

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-15 09:08:46 UTC
From: Dennis Ls. M. Cruz
Topic: 4081  Message: 4081

Dec. 15, 2005

I have been studying the Schematic Diagram of the
Service Manual for the TS-450S in the hopes of
repairing my TS-450S (NO TX on any mode, RX very ok).

In the diagrams, I see two voltage readings indicated
at certain checkpoints, an upper one and the lower
value enclosed in parenthesis. What does the upper
value means and what does the value enclosed in
brackets/parenthesis means?

Thanks for the info

Dennis Ls. M. Cruz (DV7-BKO / ex DV7-BJY)

# 4082. Kenwood TS-450S NO Tx

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-15 09:22:00 UTC
From: Dennis, Philippines low budget dxer
Topic: 4082  Message: 4082

Dec. 15, 2005

Hi again !

Now I got another problem with my TS-450S! After fixing the No SSB RX (changed the DDS IC with the new YM66312). I found out that this radio has no TX at all - all band, all mode. The Power meter has no fluctuation, thought I can hear a faint Tx with a nearby Receiver.

Now where do I start troubleshooting? I have checked the coax drive cable from the RF unit to the Finals and it's ok. As a note, the previous owner had change the finals transistor with a 2SC2290 (original was 2SC2879) for whatever reasons. The Drive transistor is still the old 2SC2509.

Am I correct to assume that the problem is somewhere in the Final Unit Board most probably the Drive Transistor 2SC2509 or the Pre-Drive 2SC1971?

Any help, specially how to check for a bad transistor in and out of circuit would be greatly appreciated. I haven't been on air for over 2 years already due to defective radio.

Regards,

Dennis Ls. M. Cruz (DV7-BKO ex DV7-BJY)
the Philippines

Yes, you can get 6:1, from DX Engineering, and I think
Alpha Delta should have one as they use it on their
DX-LP antenna.

It matches 300 ohms to 50 ohms.

The PA unit (predriver, drivers, finals) requires
about 700 mV peak to peak of RF to put out 100 watts,
Dennis.

Use a scope and look at the input to the PA, it should
be over 250 mV for sure in CW or FM mode.

Usually, the parenthesis indicates transmit mode
voltage.

Can you hear the 450 on another local receiver?

Hi Bill

I made some voltage check this morning on the Final Unit Board using the Service Manual schematic diagram. On the Emitter of the Pre Driver transistor 2SC1971 I get 0 volts on transmit (SEND) when it's suppose to be 0.97 volts. I think the culprit is the Pre Drive tranny. I hope so as this is currently available in my island while the cost of the Drive Transistor (2SC2509 or 2SC3133) is actually one weeks worth of my groceries !

Yes, I can hear the 450 on my receiver close to it. If I remove the Drive coax jumper from the RF Board to the Final Unit, then I cannot hear anything. No scope here Bill.

I have invited a TV Technician friend of mine to come over tomorrow to check the transistor out of circuit. I'll keep you guys posted on my progress.

Thanks for the assist.

Hi group,

I am wondering if anybody can shed some light on this inquiry. The optional dsp-100 for the TS-850, I understand that it is a hot and sought after item for the audiophile on hifi-ssb, widening out the audio and what not, but what else does this unit really do for the transceiver? There are switch settings and menu changes to perform before it shines on audio, but what are the other benefits if you are not into the audio thing?

It also does shaping of the CW keying and

I think it will also improve the signals of digital sigs.

I have been watching them on eBay for a while and they generally go for $500-$575.

They have a reputation of running very hot (temperature wise), and being cranky.

It was a transitional bandaid device until KW could get the 870 out.

For that kind of money, if I thought dsp was important, I would sell what I had and get a TS-870.

Neil,

Thanks for the tip! Thats pretty much what I found in my checkout on the rig, actually only had 0.39 volt on the TP2 pin - when touched it with a plastic screwdriver the receiver came alive. After moving the trimmer cap back and forth several times got the voltage set at 5.02 and everything is working fine now! It's been running for 4 hours now no problem - will have to wait and see if it comes back. The mod with the different capacitor will be an option if it comes back - the board is about $60.00

Thanks and 73,

Bill N4ZI

Dennis, that PA unit needs to see the TX8V signal, in order to "turn on" the predriver transistor. 0v on the emitter may only mean that the transistor is not turned on via the base bias voltage, which I think comes from the 8V transmit control line to the PA.

Check the base voltage on the predriver. If it is also 0v, the problem is the bias control, not the predriver.

The transistor my not be bad.

On ssb transmit occasionally the alc scale pegs out for a second or so, my signal report goes to weak but readable then everything returns to normal after a second or so of keeping the mic keyed. It is very random, sometimes one or two times per transmission other times not at all.
Wondering if it might be a simple fix or time to send it to the doctor?

Randy,

Well you definitely joined the right group - K0ZL and several others on here are excellent techs - Also do a search on the TS-850S repair page - it has lots of available information for most of the 850s typical problems. What kind of problem are you having? Just list it here to the group!

73 and Merry Christmas,

Bill N4ZI

# 4098. TS-850 not transmitting

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-18 22:51:07 UTC
From: wn9d
Topic: 4098  Message: 4098

Hello all,

I opened up rig and inspected filter unit X51-3100-00. I discovered that on and adjacent board B/3 (where K15 is located), that diode D16 is not conducting. It has a cloudy appearance inside the glass envelope. I have never inspected this before, so I can't confirm how long this condition has existed.

As an aside note, diode D17 is not in series with D18. This is contrary to the schematic diagram, which shows both D17 and D18 in series..

Can anyone suggest the part number of D16 or a comparable replacement?

Thanks and '73,
Randy WN9D

Randy,

According to the service manual, D16 is an DSA301LA, D17 is a V08(G)
and D18 is a RLS245.

# 4100. ALC repair

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-19 00:55:18 UTC
From: sailfree4me@netscape.net
Topic: 4100  Message: 4100

Per the discussion a few weeks ago, I undertook the ALC repair on my 850.

I unscrewed the small "rf board" front left top-side. I tipped it up on the left end with the DC-DC conterter component side facing up. I paralleled the two indicated resistors with 100k 1/8 watt resistors. This really stretched my eye sight. I was definitely working under a magnifying glass.

When I had the board screwed back down and before buttoning it up, I gave it a try. All was well. No more oscillation of the ALC and output power is noted in transmit.

Good luck to all who give it a try. Thanks to Bill and others for the troubleshooting that made my job easy!

73, John - W4BA

r2 and r3 on the DC-DC converter unit need to be
changed from 22k to 10-18 k. this will help the
multivibrator keep running steady during key-down.
Common problem.

This is a spark arrestor tube and should show open
circuit at all times. It should not be cloudy however.

Kenwood part number is DSA301LA;

I order them from Icom, p/n 7540000010

Icom same exact part, and quite a bit less expensive;
and no minimum.

73!

Good, John!

I have gone as low as 10K on these resistors (smd type), so you could parallel each 22K resistor with two more 22K resistors and come up with 11k, or you could use 27K also.

It's not critical, as long as it's less than 22k total! hi

Bill,

I haven't noticed any wild swings in output as other have noted,
however I do notice on PSK during a transmission my ouput will go
anywhere from 25-40 watts and flucuate. Think this is the same
problem? It's not a big deal but I would like to stabilize it.

Yep, same problem, same fix.

I wish I had all the "bad" DC-DC converter boards I
have changed out, prior to finding this little gem of
a mod!

# 4106. Re: ts-850 intermittent full scale reading on alc in transmit

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-19 14:34:52 UTC
From: Richard Ferch
Topic: 4096  Message: 4106

NO! - in PSK31/PSK63 your output power is *supposed* to fluctuate.
If it does not, your signal is "flat-topping" and generating
splatter. PSK is rather like SSB in that respect, only more so - PSK
is intolerant to even small levels of gain compression, which cause
visible signs of IMD (wide traces) on the other station's waterfall.

The easiest way to see whether your rig has the ALC fluctuation is
to put it in a constant-carrier mode like FSK, FM or AM and press
the "Send" button with no modulation - the radio will transmit a
steady carrier, which should have a perfectly constant power level.
If the power level suddenly dips every so often accompanied by a
rise in ALC voltage, and then recovers, you have the ALC fluctuation
problem.

73,
Rich VE3IAY

Glad to help,Bill,can't take any credit for that though,Its becuase
of people like Bill,K0ZL,who put this info and repair help on the web
that I was able to run across this;
Keep an eye on the raspy audio,trimming the exsisting pot only lasted
a couple of weeks,I had to replace mine,been fine ever since,While I
had the rig opened up,replaced the battery as well

I'm fairly new to HF, so I haven't had much to add. I've been soaking the group up like a sponge!

Here's my question. The display on my TS-850SAT is slow in coming on after the rig has been powered down for a few days. Once it comes on, function is 100%. Subsequent power cycles bring the display on immediately.

Anybody seen this before? Should I be preparing for a fix?

Thanks,

brianb

This is normal.

If the display goes clear out, C18 is bad.

</LURK>

I'm fairly new to HF, so I haven't had much to add. I've been soaking the group up like a sponge!

Here's my question. The display on my TS-850SAT is slow in coming on after the rig has been powered down for a few days. Once it comes on, function is 100%. Subsequent power cycles bring the display on immediately.

Anybody seen this before? Should I be preparing for a fix?

Thanks,

Has anyone else had trouble with above mentioned radio on the Digital board? I am ready to rip the whole connector from the board.
All the solder joints look good,but that means nothing. Broken wires within the connector ? Anyone had solder joint issues with this unit?
I had the radio playing this afternoon like a songbird. Just as suddenly it quit.

# 4118. Kenwood MC-60 desk mic

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-21 05:17:57 UTC
From: lichfish
Topic: 4118  Message: 4118

I recently bought a used MC-60 microphone that that
I use on a TS-850. It works fine except it doesn't
adjust the frequency when I push the "up" and "down"
buttons on the mic. The manual for the 850 indicates
that pins 3 & 4 are used for this function but they are
hooked up in the plug from mic. The cable from the mic looks
stock. I am wondering if anyone can explain how to wire
the "up" and "down" buttons? Thanks and Merry Christmas to all.

Does your factory hand mic up and down keys work? If it doesn't I would
say its in the radio. I would check this out first!

The up/down buttons on my new MC-60 causes my TS-850S to beep each time they are presses, but it requires two or three presses to change the display. Check the tuning step size in the setup menu.

Sorry for not getting back right away. We had our own share of power failure here in my island (due to preventive maintenance though).

The TV Tech that was suppose to check the transistor cancelled his visit due to rainstrorm we're experiencing. Anyway I checked the diagram again. From what you've suggested I checked the base voltage of the predriver and I get the correct 13.7v (tied to the supply line). Anyway I'll keep you posted what the tech would find out once we yank the transistor out of circuit.

Holiday Greetings to all members of this gerat group!

From: Dennis, Philippines low budget dxer
Topic: 4124  Message: 4124

Dec 22, 2005

Hi again,

Thought I'd asked what other things should I do while I'm working on
the Final Unit Board of the TS-450S. Specifically is there any mods
or parts to change in this area of the radio?

I plan to change the following :

C31 & C32 (1,000uf 16v) to 2,200uf 25v (any comments why I should NOT
increase the value to 2,200uf would really be greatly appreciated;
the increase to 25v is for long term reliability)

C24 & C47 (100uf 10v) to 50v
C28, C38, C42, C51 (47uf 10v) to 50v
and various other ceramic capacitors rated 16v with 50v type.

Any other things to change for added long term reliability?

Comments appreciated

Dennis DV7-BKO
the Philippines

Topic: 4127  Message: 4130

As far as the software, that will depend on what are planning on doing while interfaced. most logging programs (larger ones) inteface to change the frequency on a dx spot.

Ham radio deluxe acts as a screen to manage memories (on computer) set the radio, and give you a visual display.

Any good search on the internet should have given you all this answers, but hard for me to tell without knowing what YOU wish to do with it.

interfaces vary in price and of course will depend on parts available in your area, cost to ship them, and whether you can find someone who has uilt , tested and has for sale.

again there are several on the internet search that show up. you have to select the right one

Matt,

There is a schematic for such an interface in the files section of this group. I have built 4 or 5 of these based on this schematic and never had a single issue with any of them. And I can confirm it works on the 450 just as nicely as the 850. My current 850 has the circuit installed in the radio and I replaced the exteranl tuner Molex connector with a DB9 to attach the serial cable to the computer. Works very nice! As for software, depending on the application I use many. I use MixW for PSK and SSTV, ACLog for logging and Ham Radio Deluxe for DXing.

73 and Merry Christmas (to all)

Max VE3TMT

Topic: 4127  Message: 4133

Hi Matt & merry Christmas:

I have a TS-450S as well and built an nice interface in October that is described well in the Files section - just click Files and look for Kenwood IF-232 Interface by VE9-XYZ. Good photos and schematic.

I liked this design as it was small, and still offred a separate ground for the PC and radio - something I felt was important. This design is a modified TK5EP design that uses opto-isolators to keep grounds separated.

For Software, I'm using AClog 2.8 for logging, Ham Radio Deluxe for control, and Kenwood Smart Memory Manager for management of the 450's mememory allocations. I'm planning to play with other software - do a search on this newsgroup back a month ago, asd I asked others to recommend software for my rig as well.

Good luck

kevin VE9-XYZ

Hi

Yep, tried a different comport and still did the same thing. I also have a Yaesu on CAT and it works fine on com1 where I had the 450 hooked up. Got a new microHam USB II for Christmas, so will hook that up and see what happens. Thanks and 73

# 4136. TS-850S & MC-60 Low ALC Problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-26 17:13:12 UTC
From: Mark Saunders, KJ7BS
Topic: 4136  Message: 4136

I have the stock microphone for my TS-850S and have been using it since purchasing my rig back in 1995 with fair results. When I listen on the Monitor I hear a lot of noise from holding the mic and keeping the PTT engaged (popping and clicking). I decided to upgrade to a desk mic and purchased an MC-60. I've been less than satisfied with the MC-60 as I get virtually NO ALC deflection without the preamp in the MC-60 on.

I get about 75% ALC deflection with the mic gain at about 2 o'clock setting with the stock hand mic. However, when I use the MC-60 the mic gain is full clockwise and barely gets any ALC deflection with the pre amp off (one lighted ALC segment). The mic setting is for 500 ohms as the TS-850S has a low impedance mic input.

The MC-60 has good sound on the monitor setting (turned almost all the way up) and I would like to use the mic on the air, but it does not seem to deliver the necessary output. I would like to use the mic without the preamp until I really need it. The mic sounds like it has too low output.

Do I have unrealistic expectations from this mic or is this indicative of another problem? Any help is greatly appreciated.

Where do you have the mic set.
50K or 500. It needs to be set to 500 and the pre amp on. This works best to me on my Kenwoods. I have many.

# 4138. dsp-100

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-26 18:14:01 UTC
From: Eric
Topic: 4138  Message: 4138

Tom, Paul, thanks for the reply to the dsp-100 question(s). I asked those questions to see what people see in the combo, or unit itself. I have a 850/dsp-100 and found dsp-100 to be a so-so item. It does quiet the receive and perform bandwidth filtering. As far as transmit audio quality I have received plenty of unsolicited reports using just the 850 and mc-60, so when adding the dsp unit, it is neglible. I am not a cw guy and really can;t give any feedback there. I will do some more comparisons and use with the unit, but who knows, there may be a dsp-100 for sale!

I also have an 870 and as far as dsp functions it is superior to the previously discussed combo. The filtering is awesome as is the beat cancel. Noise reduction sounds watery no matter how it is set (same as the ts-2000). I plan on keeping the 850 & 870.

The switch on the MC-60 is on 500 as the 850 requires a low impedance mic.

With the MC-60 preamp on the mic sound too hot at about 50% ALC deflection.
I'm wondering if there is a known ALC problem that may correct this. This
condition does not sound right to me.

From: Dave
Topic: 4136  Message: 4140

FYI on the ALC - I did some IMD measurements on several TS-850s. The correct setting for the ALC is, as you say, "virtually NO ALC". 75% is definitely too much. The guy you're in QSO with won't hear any distortion, but at 75% ALC, you're generating some broadband noise, up to +/- 50kHz from your main signal. Not individually a big problem, but collectively, everybody running their radios this way is why 20 meters has such a high background noise level.

I set the mic gain (or CAR level in CW) to the point where the ALC just barely moves, then back down a little.

# 4141. TS-850 ALC problem

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-27 17:58:03 UTC
From: merckxist
Topic: 4141  Message: 4141

I am having a problem with low/no ALC on 15 Meters.Initially, I noticed a sudden increase in TX power on 60M.I had the power out set at just below mid scale, and voice peaks on ALC were indicating 70-80W, instead of 50, as before.Checking on dummy load, on 60M and some of the other bands, it looked like max power was at about 120-130W.In the process of troubleshooting, I pulled the small ribbon cable out of the small board on the left side of the set, to get a better view of the DC-DC board, to see if there were any visible indications there.There were not, but when I powered up the set after putting everything back together, power out was back to normal.
I decided to go through all bands and check output power and ALC.All seemed to be ok, with the exception of 15M.In CW or FM, full power, full carrier, no ALC indicated.If power was reduced to about 8, on the scale, an ALC indication would start to show.At this time I tried adjusting VR7, 15M, FM mode.I found it very touchy.I was trying to see if I could get some ALC showing.I didn't have much luck with it, and tried doing the adjustment on 20M.I set power, FM, full power, full carrier, at about 90-95W.Back to 15M, now have about 4 dots showing on ALC, looks like about 90W out, ALC seems stable, not oscillating.On all other bands ALC is near full scale, with max carrier.
Further checking in SSB, advancing mic gain to about 1/3 scale gives normal ALC indication, all bands, except 15M.15M, no ALC at all, set at full power, even with mic gain at full clockwise.Reducing power to about 1/3, starts showing some ALC.Transmitting on dummy load, listening to monitor, I can hear TX audio start distorting at high mic gain settings, so it does not seem to be a problem there.Tx audio in the monitor sounds normal if mic gain is left in the same position as other bands.I can whistle up about 90W in SSB, so it looks like the set is putting out power, but no or low ALC just on 15M.This would seem to eliminate the DC/DC board, but...?This problem may have been in the 850 for a some time, since I havn't operated on 15M for a very long time.It does seem to me that 15M did work normally before.So, I'm open to constructive suggestions, if any one has had this problem before.

EXCELLENT!

The CAR is at 11 O'clock and the PROC is at 9 O'clock when needed. Power indicates about 50 watts in USB, indicated on the 850s display (average power I believe), and sounds really good through the MONI function.

Thanks for the help. I've not operate much phones for the last few years because of the noise from holding and handling the stock hand microphone. The MC-60 will allow me to operate phones and not have that obnoxious noise on my signal.

After making these adjustments, I answered a CQ DX from PY2RDM Brazil without the COMP on.

Looks like I am in business again.

# 4143. Re: ALC meter readings

Yahoo group: TS-850_450_690 (2001 — 2005)
Date: 2005-12-29 22:54:48 UTC
From: max_ve3tmt
Topic: 4143  Message: 4143

Can someone give me a simplified answer as to what the correct ALC reading should be? I assume the red ALC scale on the 850 is there for a reason. Where should the meter deflect to fir proper ALC action, to the end of the red scale or no deflection at all? If I turn the mic gain down so there is no ALC indication during voice peaks, my average SSB output is very very low.

Max

Scott,

I used a product called Pro Lab PL100 Penetrating Lubricant. Just one of many available sprays on the market. I checked with the manufacturer and it also works good at cleaning potentiometers. My M.CH/VFO CH pot was skipping and it fixed it as well.

Other suggestions from the group?

Burt,

My father (WC7N) recommended Burghardt ( www.*burghardt*-amateur.com ) to me when he sent me his TS-450. I have used them and found them to be very reasonable. They do good work and are timely. The day they received my radio I received a call from the tech. That was a Friday, it was shipped back to me the following Tuesday and works great.

Good luck!

comports for kenwood should be 4800 8,n,2 as per manual...different from
yaesu.......

Hi Max

Thanks for the info, but think it is a problem in the radio that is giving me grief. Guess I'll have to send it in and get it checked out. 73 and HNY Tom W7WHY
